THEME–A

India and the World, Land and the People

Our planet is a vast and fascinating place filled with diverse regions, cultures, and natural wonders. Every place on Earth has its own unique features that influence the way people live, work, and connect with one another. India, with its rich heritage and varied landscapes, is an important part of this global story. From high mountains and wide plains to coastal areas and islands, different surroundings shape human life in many ways. By exploring the Earth and its many regions, we learn how nature and people are closely connected and understand the beauty and diversity of our world.

1 Locating Places on the Earth

Let's Learn About

- A Map and Its Components
- Mapping the Earth
- Understanding Time Zones

Let's Gear Up

Imagine a big globe turning slowly inside a classroom. Children stand together, looking at bright continents. One child follows the lines of latitude and longitude, learning how these special lines help us find correct places. Another points to the equator, the warm line around Earth, while her friend finds the cold poles at the top and bottom. The teacher opens an atlas, showing maps with countries, cities and famous places. The Eiffel Tower in Paris, the Pyramids in Egypt and the Great Wall of China seem exciting on the pages. A compass is shared around, teaching directions-north, south, east and west. Together, they learn that finding places is like solving a puzzle: maps, globes and co-ordinates are the clues. With these tools, everyone can explore the world through imagination, finding mountains, rivers and oceans, while understanding how our planet stays connected.

In this story, we learn how maps and directions help us find different places. Now let's learn about maps and directions more clearly together.

A MAP AND ITS COMPONENTS

The word "Map" comes from the Latin word "mappa," which means "sheet" or "napkin." It is called this because the first maps were usually drawn or made on cloth, skin and parchment. If we draw the world or any part of it on paper, that picture is called a map.

Thus, a map is a drawing or picture of the Earth's surface or any part of it on a flat surface using a scale.

Types of Maps

Broadly, maps can be divided into three types:

(I) Physical or Relief Maps: Maps that show Earth's natural features like mountains, plateaus, plains, rivers and oceans are called physical or relief maps.

Physical Map of India

Political Map of India

(ii) Political Maps: Maps that show cities, towns, villages, and different states and countries with their boundaries are called political maps. For example, a map of India showing all the states is a political map.

(iii) Thematic Maps: Maps based on a particular theme are called thematic maps. They show special information, such as climate, rainfall, railways, roads, farming, and more.

In-Text Questions

1. "Mappa" is a ..... word.
2. Rivers and oceans are shown in ..... maps.
3. Maps showing climate, rainfall or population are called ..... maps.
4. A map that shows states and borders is a ..... map.

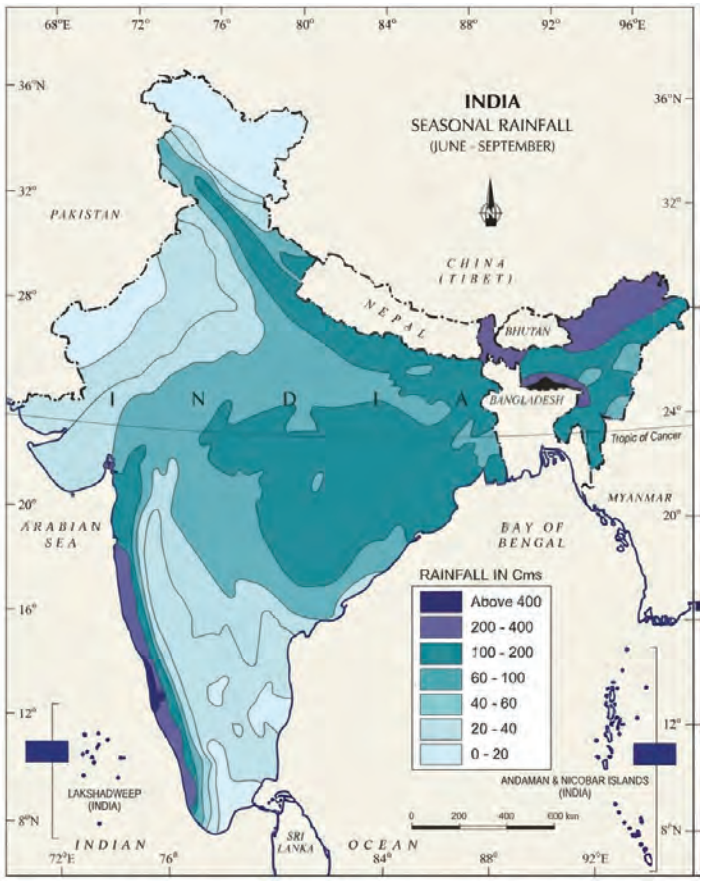
Do you know?

- A book that contains maps of the world, countries, and continents is called an Atlas.
- On 20 May 1570, Abraham Ortelius, a Flemish mapmaker, published "Theatrum Orbis Terrarum," the world's first Atlas.

Abraham Ortelius

Atlas

- A cartographer is a person who makes or draws maps.
- Cartography is the art and science of creating and drawing maps.



Thematic Map (India Seasonal Rainfall)

Components of a Map

A map has four main parts. Without these parts, we cannot understand a map properly. They give us useful information about the map.

The four components are:

Title

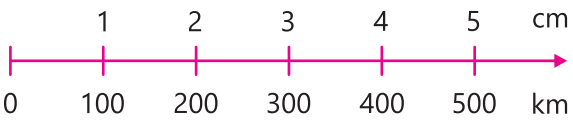
The title gives the name of a map. It helps the reader understand what the map shows. Every map should have a clear and proper title.

For example: if a map is named "Population of India," it shows how people are living in different areas of India.

Scale

Scale means the relation between a distance on a map and the real distance on land. Distances on maps are found by using the scale. Every map is made with a scale. A scale helps maps become smaller or larger. The size of a map is shown in comparison with the size of a place through a scale. *For example:* When the distance between place A and place B is 100 km in reality, it is shown as 1 cm on the map, which means 100 km = 1 cm on the map. This shows that 100 km on the ground equals 1 cm on the map.

Depending on the size of the scale, maps are divided into different types:



Scale : 1 cm= 100 km.

(i) Small-Scale Maps: Maps that use a small-scale to show big areas of the Earth are called small-scale maps, for example, 1 cm = 100 km. They give fewer details about large regions like continents or countries. The maps in your atlas are made using a small-scale. The map of India shown in your book is also an example of a small-scale map.

Scale : 1 cm= 100 m.

(ii) Large-Scale Maps: Maps made with a large scales are called large-scale maps. These maps show small areas on a bigger-sized map. Their main purpose is to show many details about a small area, for example, 1 cm = 100 metres.

A map of a village or city is an example of a large-scale map.

The differences between small-scale maps and large-scale maps can be understood in these ways:

Small-Scale Maps	Large-Scale Maps
1. These maps show big parts of the Earth's surface (1 cm = 100 km).	1. These maps display small parts of the Earth's surface (1 cm = 100 m).
2. They display only limited details about a large area.	2. They show a large amount of information about a small area.
3. A world map is a small-scale map. All the maps shown in an atlas are small-scale maps.	3. A road map, city map etc. are examples of large-scale maps.

Direction

Have you ever noticed an arrow with the letter 'N' at the corner of a map? It shows the north direction. Most maps use an arrow marked with 'N' to show directions. Some maps also have a compass to help us find directions.

Compass

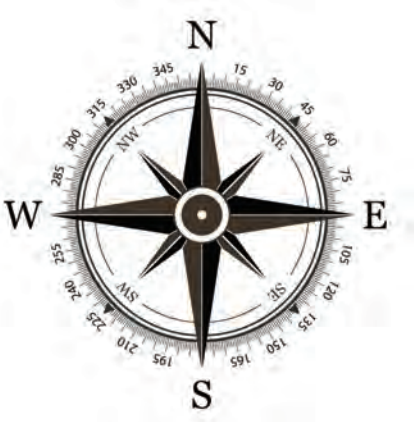
Direction is the way in which a person or object moves. A compass is a tool with a magnetic needle that helps us find directions. Usually, directions are divided into two major types.

INDIA - Outline Map

Map showing North Direction

Cardinal Directions

North (N), South (S), East (E) and West (W) are the main directions. They are also called the four major points of a compass.



Intermediate Directions

Intermediate Directions

Directions found between two main points are called middle directions. North-East, South-East, North-West and South-West are these directions.

All these directions help us find the right way. They help us locate places easily.

Cardinal Directions

Conventional Symbols

Conventional symbols are common signs used on maps to show different features of the Earth's surface. These symbols help us know mountains, rivers, roads and buildings in small spaces. They make the map simple to read and understand clearly.

Conventional symbols are called map legends because they tell us what the map shows. Like a legend, they are also called map keys because they explain various symbols.

Analyze Thoughts

- On your way back home from school, how many turns do you make ?
- Which directions do these turns face on your way?

Analyze Thoughts

- Pick any four features from the table below that are found around you.

Conventional symbols are grouped into three main types:

1. Line Symbols: roads, railways, borders etc.
2. Point Symbols: wells, buildings etc.
3. Area Symbols: villages, farms etc.

Features	Symbols
Roads metalled	
Roads unmetalled	Cart track, pack track and pass; footpath with a small bridge.	
Streams: with path in the bed; canal.	
Dams: masonry or rock-filled; earthwork, weir	River bank: dry with water channel; with island & rocks, tidal river	
Submerged rocks, shoal; swamp, reeds	
Wells: lined, unlined; tubewell, spring; tanks: permanent, seasonal.	
Embankments: road or railway; tank; uneven ground.	
Railways: broad gauge; double; single with station; being constructed.	

Features	Symbols
other gauges; double; single with milestone; under construction.	Mineral or tramway line, telegraph line; hill cutting with tunnel.	Contours with smaller features; rocky slopes, steep cliffs.	
Sand features: (1) flat, (2) sand hills and dunes (mapped), (3) moving dunes.	
Towns or villages: populated; abandoned; fort.	
Huts: permanent; temporary; tower; historical remains.	
Lighthouse, lightship, buoys–lighted or unlighted, anchorage.	
Temple, chhatri, church, mosque, idgah, tomb, cemetery.	
Mine, grass and scrub	
Palms: palmyra; other plantations; conifers; bamboos; other trees.	
Surveyed tree	
Boundary: international	
Boundary: state: demarcated; undemarcated	
Boundary: district; subdivision; Tehsil or Taluk; forest	
Boundary pillars: surveyed; unlocated; village trijunction	
Heights: triangulated station; point; approximate	△ 200 • 200 • 200
Beench-mark: geodetic; tertiary; canal	• BM 63.2 • *BM 63.2* • 63
Post office; telegraph office, combined office, police station	*PO* *TO* *PTO* *PS*

In-Text Questions

1. What are the three main types of maps?
2. Draw a school map showing the staffroom, the principal's office, the library and the playground, using directions, a scale and colours to label areas clearly and properly.
3. Find out :
   (a) How many centimetres are there in one kilometre?
   (b) How many inches are there in a single mile?
   (c) How many metres are there in one kilometre?

Colour codes help show various types of land features.

Colour	Features
Brown	Land features like mountains
Black	Roads, railways and boundaries
Blue	Water
Red	Settlements and construction features
Green	Vegetation/plains
Yellow	Plateaus

Go Further

Compare the differences between a globe and a map :

	Globe	Map
1	A globe is shaped like a round sphere.	A map is a flat representation of the Earth's surface.
2	A globe is three-dimensional in shape	A map is two-dimensional.
3	A globe shows the correct shape of continents and the distances between lands.	A map distorts the shape and size of continents.

MAPPING THE EARTH

Maps are useful when we need to study a part of the Earth, such as a country, state or city. But how can we study the whole Earth? We know that the Earth is round, while maps are flat. A flat map cannot show the Earth's curved surface properly without making some changes. To study the entire Earth, people made a small and correct model to view it fully. This model of the Earth is called a globe.

A globe is a correct model or a small copy of the Earth. It is a hollow ball that shows the whole world, including all lands and oceans. Its shape is similar to the Earth's, so it shows the actual size and shape of continents and oceans. It also shows different landforms and surface features.

It shows features like hills, plateaus and plains. It helps to find the shortest distance between places and shows the exact location and direction of places compared to each other.

If you observe the globe carefully, you will see many horizontal and vertical lines.

A Globe

Now, let us learn about some parts of the globe:

(a) Understanding Coordinates

We have learned that a globe is better for finding any place on Earth because its shape is similar to the Earth's shape. To locate any place on Earth correctly, we use the coordinate system. A geographic coordinate system is a three-dimensional method used to find places on the Earth's surface. The exact address of any place on Earth is shown by two numbers: one for latitude and one for longitude. These two numbers are called coordinates. Longitude shows the east-west position, while latitude shows the north-south position of a place. In this way, we can find the exact location of any place on Earth.

It is very hard to find and locate these features without using any fixed point.

Learn about a reference point by seeing the following example:

Imagine that today is your birthday and you have invited your friends. They do not know the location of your house. You tell them that your house is near D.A.V. School, opposite Prabhat Bakery. Here, you use D.A.V. School and Prabhat Bakery as reference points to explain your home's location. Both of these are called reference points. However, these references are useful only in nearby areas. For national and international purposes, we need references that are accepted worldwide. Latitudes and longitudes are examples of such reference points. Now, let us learn about latitudes and longitudes in more detail.

In-Text Questions

1. What do we mean by a globe?
2. Pick up a globe and locate your country, India, on it.
3. Write a list of objects that are shaped like the Earth.

(b) Latitudes

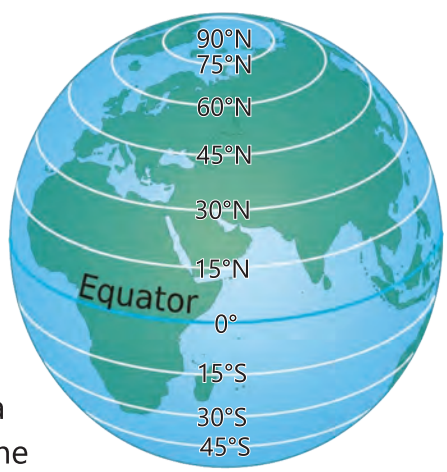
Latitude is the distance of a place on Earth measured in degrees from an imaginary line called the equator, which is located midway between the North and South Poles.

Usually, distance is measured in kilometres or miles, but angular distance is measured in degrees. On the globe, you can see lines going from east to west. These lines are imaginary and are called latitudes.

Key Facts about Latitudes

- Latitudes are parallel to each other. All circles that are parallel to the equator up to the poles are called parallels of latitude.
- These are imaginary lines going from east to west, used to measure north-south positions on Earth.
- The gap between two latitude lines is considered 1°, which is equal to 111 km.

  The Equator is the most important latitude. It is used as a reference because it divides the globe into two equal parts. The upper half of the Earth is called the Northern Hemisphere and the



Latitudes

lower half is called the Southern Hemisphere. The Equator shows zero degrees latitude and is the biggest latitude on Earth.

Northern Hemisphere
Southern Hemisphere
↑ → 0° Latitude (Equator)
↓

- All lines above the Equator are called north latitudes. Similarly, all lines below the Equator are called south latitudes.
- The distance from the Equator to the North or South Pole is one-fourth of a circle around the Earth, which is 1/4 of 360°, or 90°. Therefore, 90°N represents the North Pole and 90°S represents the South Pole.
- The letter 'N' shows North latitudes and the letter 'S' shows South latitudes on maps and globes.
- Not all latitude lines have the same length. Their length decreases as you move closer to the poles.
- The gap between any two latitude lines stays the same everywhere.

Go Further

The circumference of the Earth is 40,000 km and being spherical, it has a full 360° angle.

For 360° the distance is 40,000 km (Earth's circumference).

For 1° = 40,000/360 = 111.11 km

Thus, 1° of latitude equals about 111 km on Earth.

Some Important Latitudes

(i) The Equator: Represents 0° latitude.

(ii) The Tropic of Cancer: Located at 23½° north in the Northern Hemisphere.

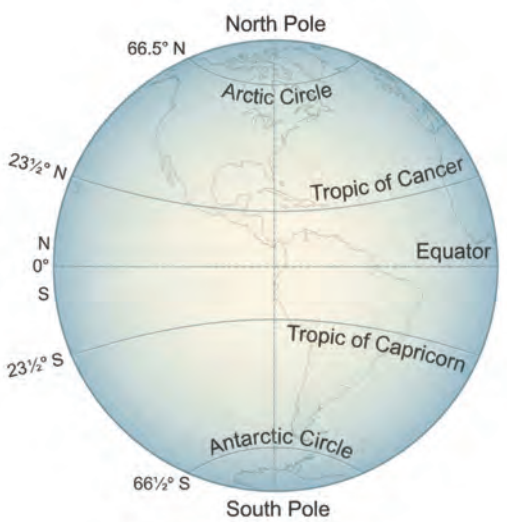
(iii) The Tropic of Capricorn: Located at 23½° south latitude in the Southern Hemisphere.

(iv) The Arctic Circle: Located at 66½° North latitude in the Northern Hemisphere.

(v) The Antarctic Circle: Located at 66½° South latitude in the North Southern Hemisphere.

(vi) The North Pole: Located at 90°N in the Northern Hemisphere.

(vii) The South Pole : Located at 90°S latitude in the Southern Hemisphere.



Important Latitudes

Do you know?

In India, the Tropic of Cancer crosses eight states: Rajasthan, Gujarat, Madhya Pradesh, Chhattisgarh, Jharkhand, West Bengal, Tripura and Mizoram.

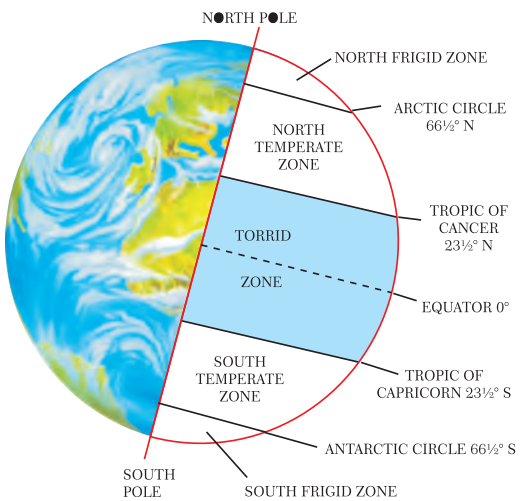
Latitudes and Climate

Different areas of the Earth receive different amounts of heat from the Sun, causing climate changes with latitude. The Earth is divided into three heat zones based on the Sun's heat.

These zones are:

(i) Torrid Zone

- Torrid means extremely hot. It is the hottest zone on the Earth.
- It is found between the Tropic of Cancer and the Tropic of Capricorn spanning across the Equator.
- The noon sun is directly overhead at least once every year at all latitudes within this zone, so it receives the most heat.



Heat Zones

(ii) Temperate Zone

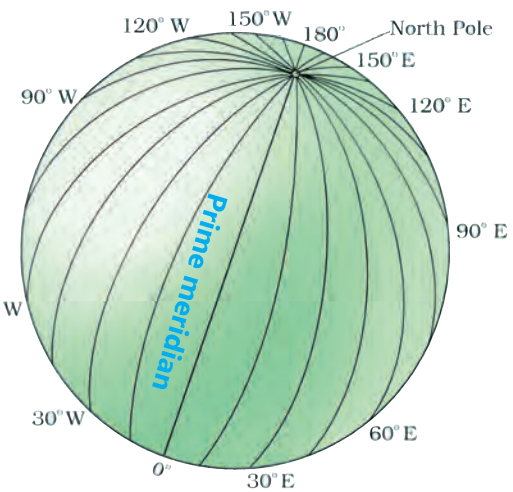
- It is found between the Tropic of Cancer and the Arctic Circle in the Northern Hemisphere and the Tropic of Capricorn and the Antarctic Circle in the Southern Hemisphere.
- These areas have moderate temperatures because they get slanting sunlight all year. This happens because the Sun's rays fall at a lower angle near the poles.

(iii) Frigid Zone

- This zone is found between the Arctic Circle and North Pole in the Northern Hemisphere and the Antarctic Circle and South Pole in the Southern Hemisphere.
- These are the coldest regions on Earth because they receive highly slanting rays from the Sun.

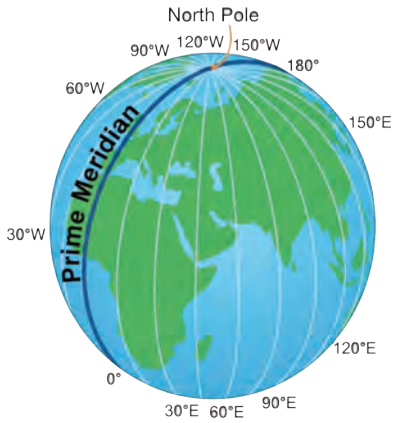
(c) Longitudes

Look at the globe carefully again. You will see many lines running from the North Pole to the South Pole. These lines are used to determine east-west positions on Earth. These lines are also called meridians of longitude.



Longitudes with Prime Meridian

Unlike latitudes, all meridians have the same length, so any meridian can be used for measuring longitude. In 1884, an international agreement chose the meridian passing through the British Royal Observatory at Greenwich, near London, as the starting line for counting longitudes. This meridian is called the Prime Meridian. Its longitude is 0°. From here, we measure 180° east and 180° west.



Longitudes

Some Important Facts about Longitudes

- The distance between two meridians is measured in degrees, which are divided into minutes and then into seconds.
- There are 360 meridians of longitude, divided equally into 180° east and 180° west.
- Longitudes are half-circle lines. They are all equal in length but are not parallel.
- The distance between two meridians of longitude is not the same. It becomes smaller toward the poles and becomes zero where all meridians meet.
- The Prime Meridian and the 180° meridian together divides the Earth into two halves: the Eastern Hemisphere and the Western Hemisphere.
- The letter 'E' shows Eastern longitudes and 'W' shows Western longitudes on maps and globes.
- The 180° East and 180° West meridians of longitude are on the same line.

Grid

As explained earlier, latitudes and longitudes cross each other on the globe to form a grid system. This network of lines serves as the Earth's complete coordinate system, allowing us to find the exact location of any place on a globe or map.

Map of India with Latitudes and Longitudes

UNDERSTANDING TIME ZONES

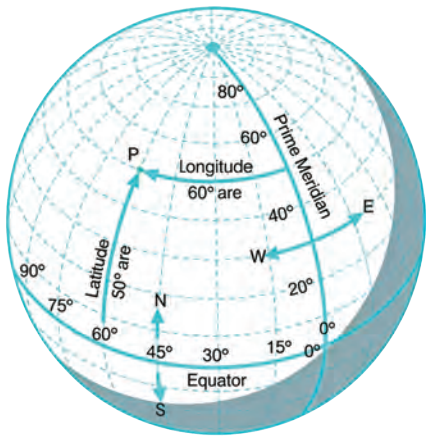
The Sun is the most reliable natural timekeeper in the world. So, time is measured based on the relationship between the Sun and the Earth's movement. As the Earth completes one rotation every 24 hours, it turns 15° per hour which is equal to 1° every 4 minutes. The Earth rotates from west to east. For every 15° eastward, local time moves ahead by 1 hour, and for every 15° westward, local time moves back by 1 hour. Therefore, places east of the Greenwich Meridian see the Sun earlier and gain

time, while places west see it later and lose time.

Local time at westward New York	Local time at GMT London	Local time at eastward India
is 7:04 am (4 hrs. 56 min. behind)	(12 noon)	is 5:30 pm (5 hrs. 30 min. ahead)
Lose time going Westwards	0° (Greenwich Meridian)	Gain time going Eastwards

Local Time

All places located on the same longitude have the same local time, which is called local time. This is calculated using the Sun's shadow, which is shortest at noon and longest during sunrise and sunset every day. For example, when the Sun is at its highest point over the Prime Meridian, all places on this meridian have noon, meaning every place along a particular longitude shares the same local time.



Longitude and Time

As the Earth keeps rotating, places at different longitudes have different times. The Earth moves from west to east. Therefore, people in the east see the Sun earlier. During its rotation, the Earth takes 4 minutes to cover 1° of longitude.

The Earth completes one full rotation of 360° in 24 hours.

In 24 hours, the Earth turns 360°. In 1 hour, it turns 360° ÷ 24 = 15°.

The Earth covers 15° in 1 hour. Time taken to cover 1° = 60 ÷ 15 = 4 minutes.

Thus, the Earth moves 1° in 4 minutes. Since the Earth takes 4 minutes to cross one meridian, it needs 24 hours, or 1440 minutes, to complete one full rotation.

Indian Standard Time (IST)

India lies between 68°7′E and 97°25′E longitudes. There are 29 longitudes between them, and we know that time changes with every longitude. If we calculate time from the Prime Meridian, India would have 29 different local times. Having many local times in India would create confusion and problems. To avoid this, the local time of a central longitude was chosen as the standard time for

the whole country.

Do you know?

What is the meaning of A.M. and P.M.?

A.M. stands for ante meridiem, meaning the time before noon.

Ante means before and meridiem means Sun's position at noon.

Thus, the time between midnight and noon is marked as A.M. For example, 6 o'clock in the morning is written as 6 A.M.

P.M. stands for post meridiem, meaning the time after noon or midday.

Thus, the time between noon and midnight is marked as P.M.

For example, 5 o'clock in the evening is written as 5 P.M.

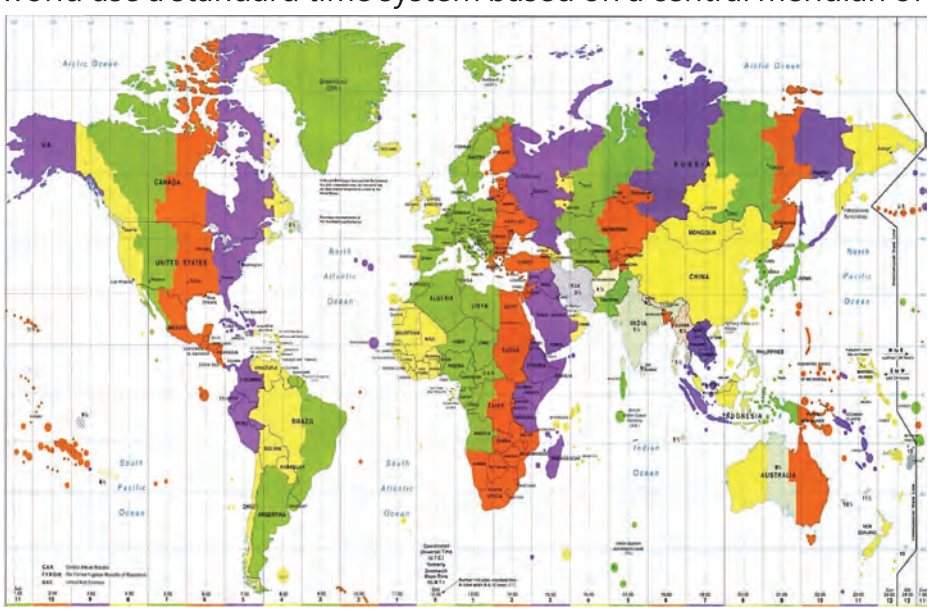
Go Further

When it is 12:00 noon in London, it is 5:30 P.M. in India because Indian Standard Time follows the local time of 82°30'E longitude. This longitude lies east of Greenwich, near London and is 5 hours 30 minutes ahead of Greenwich Mean Time (GMT).

The 82°30'E longitude, passing through Mirzapur near Prayagraj (formerly Allahabad), is chosen as the Standard Meridian. The local time along longitude is used as the standard time for the whole country. This is called Indian Standard Time, shortened as IST.

Time Zones Around the World

Like India, most countries in the world use a standard time system based on a central meridian of their area. To manage time, the world is divided into 24 standard time zones, each separated by 15° of longitude or one hour of time. Time zones are regions on Earth that have a uniform local time. They help us know the time in different places around the world. Each time zone represents one hour of the Earth's complete twenty-four-hour day. The Prime Meridian is the reference line for all time zones. The time at the Prime Meridian is called Greenwich Mean Time (GMT).



Time Zones of the World

As we move east from the Prime Meridian, the time is ahead. For every 15° of longitude we move east, one hour is added to the time. The Earth completes a 360° rotation in 24 hours, so 15° represents one hour. For example, when it is 12:00 noon at the Prime Meridian, it will be 1:00 PM at 15°E, 2:00 PM at 30°E, and so on.

But as we move west from the Prime Meridian, the time goes back or decreases. For every 15° of longitude we travel west, one hour is subtracted from the time. For example, if it is 12:00 noon at the Prime Meridian, it will be 11:00 AM at 15°W, 10:00 AM at 30°W, and so on.

Time zones help us find the time of any place on Earth. They are useful for travelling, business and communicating with others.

If you look at a world map, you will see that the lines showing time zones are not completely straight. This is because time zone lines often follow country or area boundaries. Each country or region chooses its time zone according to its needs. Time zone lines may also be adjusted to match political or administrative boundaries or to keep important cities in the same time zone for convenience.

However, large countries like the U.S.A., Canada and Russia, which extend widely from east to west, need to use many time zones. Russia covers nearly 165° of longitude and is divided into 11 time zones. This means Russia has 11 standard times. Canada and the U.S.A. each have six time zones.

The line exactly opposite the Prime Meridian, near 180° longitude, is called the International Date Line (IDL). The +12 and -12 time zones meet at this line.

When we cross the International Date Line by ship or plane, the date changes. If we travel from west to east, we move back one day. For example, the date changes from Sunday to Saturday.

But, if we travel from east to west, we move ahead one day, that is, from Sunday to Monday. The International Date Line also bends at some places to avoid dividing countries into two different dates.

By now, you should know how people in different parts of the world experience the same time differently based on their position from the Prime Meridian.

In-Text Questions

1. (a) 0° latitude represents the ..... .
   (b) The earth takes ..... to complete one rotation.
   (c) The hottest region of the earth is the ..... zone.
2. Use a map of India and mark 82½° E longitude on it.
3. Find the local time in London when it is 5:30 PM in India.
4. Find the latitude and longitude of Delhi, Mumbai and the United States.

NEW TERMS

- **Scale:** Shows real distance from map
- **Direction:** Way or path to move
- **Globe:** Round model of the Earth
- **Indian Standard Meridian:** Longitude fixing India's standard time
- **Equator:** Imaginary line dividing Earth equally
- **Map:** Flat drawing of Earth's surface
- **Indian Standard Meridian (Mirzapur):** Time reference line passing Mirzapur
- **Intermediate directions:** Directions between main directions
- **Grid:** Network of latitude and longitude lines
- **Longitudes:** Lines running from pole to pole
- **Latitudes:** Horizontal lines running east-west that measure.

QUICK TAKE

- Map essentials include title, scale, direction and common symbols.
- The Equator is an imaginary central circle that divides Earth into northern and southern halves at zero degrees.
- A map shows the Earth on a flat surface using a reduced scale to understand distances.
- Latitude measures the distance of a place north or south of the Equator in degrees.
- Types of maps include physical maps, political maps and maps showing specific information.
- Longitudes are imaginary vertical lines extending from the North Pole to the South Pole.
- The Prime Meridian passes through Greenwich Observatory in England, showing zero longitude and dividing Earth into eastern and western halves.
- India's standard time is based on 82°30′ east longitude, passing through Mirzapur near Prayagraj.
- Moving east increases time, while travelling west decreases time.
- Places on the same longitude have the same clock time, called local time.
- Earth has 360 longitude lines, equally divided into eastern and western parts.
- The globe is divided into 24 time zones, each covering 15 longitude degrees or one hour.
- The International Date Line is located opposite the Prime Meridian near 180° longitude.
- Latitude and longitude lines help find exact locations on globes or maps.

I. OBJECTIVE TYPE QUESTIONS

A. Choose the correct answer.

1. The network of lines of latitudes and longitudes is also known as a

   (a) Grid ☐ (b) Sketch ☐ (c) Plan ☐ (d) None of these ☐

2. Which map shows countries, states, districts, and other political boundaries?

   (a) Physical Map ☐ (b) Political Map ☐

   (c) Thematic Map ☐ (d) Sketch ☐

3. Directions that fall between two main cardinal points are called ..... directions.

   (a) Cardinal Directions ☐ (b) Ordinal Directions ☐

   (c) Intermediate Directions ☐ (d) Main Directions ☐

4. The distance between Place A and Place B is 1000 km on land, but it is shown as 1 cm on the map. This means 7500 km on the ground will be shown as ... cm on the map.

   (a) 75 ☐ (b) 750 ☐ (c) 0.75 ☐ (d) 7.5 ☐

5. The Antarctic Circle is located in the

   (a) Northern Hemisphere ☐ (b) Southern Hemisphere ☐

   (c) Eastern Hemisphere ☐ (d) Western Hemisphere ☐

6. Which of the following is the exact model of the Earth?

   (a) Map ☐ (b) Globe ☐ (c) Apple ☐ (d) Ball ☐

7. Which of the following statements about longitudes is false?

(a) These are semi-circular lines.

(b) The Greenwich Meridian is the most important longitude.

(c) There are 180° of longitudes.

(d) All longitudes meet at the North and South Poles.

8. Russia has how many different time zones?

(a) 5 (b) 7 (c) 8 (d) 11

9. How much time does the Earth need to move across one degree of longitude?

(a) 4 minutes (b) 6 minutes (c) 7 minutes (d) 10 minutes

10. Which of the following is called the Indian Standard Meridian?

(a) 23½°N (b) 66½°S (c) 66½°E (d) 82½°E

B. Write 'T' for True or 'F' for False.

1. A globe is a round, three-dimensional model of the Earth.
2. 66½°N latitude is known as the Arctic Circle
3. The Greenwich Meridian shows 0° longitude.
4. A map is not an exact model of the Earth.
5. Yellow colour is used to show settlements on a map.

C. Choose the option that correctly matches items from Column A and B.

Column A	Column B
1. Antarctic Circle	(i) 0° latitude
2. South Pole	(ii) 23 1/2° N
3. Equator	(iii) 66 1/2° S
4. Arctic Circle	(iv) 90°S
5. Tropic of Cancer	(v) 66 1/2°N

(a) 1.-(iii), 2.-(i), 3.-(iv), 4.-(v), 5.-(ii)

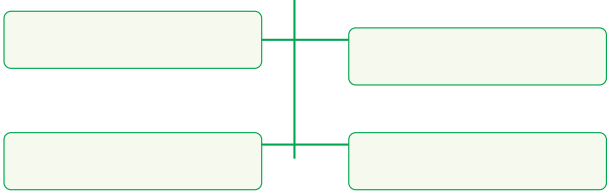
(b) 1.-(iii), 2.-(iv), 3.-(i), 4.-(v), 5.-(ii)

(c) 1.-(iv), 2.-(v), 3.-(i), 4.-(iii), 5.-(ii)

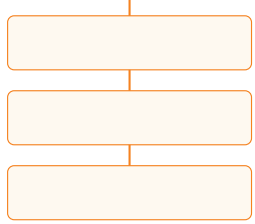
(d) 1.-(iii), 2.-(iv), 3.-(i), 4.-(ii), 5.-(v)

D. Fill in the blanks with correct answers.

1. Names of the four Components of a Map



2. Names of the three Heat Zones of Earth



E. Assertion-Reason

For question numbers 1 to 4, two statements are given—one labelled Assertion (A) and the other labelled Reason (R). Select the correct answer from the codes:

1. Assertion (A) : North, South, East and West are known as cardinal directions.
   Reason (R) : Cardinal directions help us identify the main directions on a map or globe.
2. Assertion (A) : Local time varies from place to place.
   Reason (R) : Local time depends on the longitude of the place.
3. Assertion (A) : The equator divides the Earth into the Northern and Southern Hemispheres.
   Reason (R) : The equator is an imaginary line located at 0° latitude.
4. Assertion (A) : Indian Standard Time (IST) is calculated using the 82½°E longitude.
   Reason (R) : Time is the same across a time zone and does not vary with longitude.

(a) Both Assertion (A) and Reason (R) are true, and Reason explains Assertion correctly.
(b) Both Assertion (A) and Reason (R) are true, but Reason does not explain Assertion.
(c) Assertion (A) is true, but Reason (R) is false.
(d) Assertion (A) is false, but Reason (R) is true.

II. PICTURE STUDY

1. Point out the Equator on the diagram. What is its degree?
2. Show the Tropic of Cancer. Which hemisphere does it lie in?
3. Locate the Tropic of Capricorn. Which hemisphere does it lie in?
4. Find the Arctic Circle. What is its latitude value?
5. Find the Antarctic Circle. What is its latitude value?

III. SHORT ANSWER TYPE QUESTIONS

1. Name the three main types of maps.
2. What is Indian Standard Time (IST)? Why do we use one time zone for the whole of India?
3. Write any two important points about latitudes.
4. What is the Greenwich Meridian? Why is it important?

IV. LONG ANSWER TYPE QUESTIONS

1. Why are conventional symbols used on maps? How do they help us understand a map better?
2. Why is the time in India about 5 hours ahead of London? Explain in simple words.
3. What are the Torrid Zone and the Frigid Zone? Write the differences between them.
4. Explain the three main types of maps with examples.

V. SOURCE BASED QUESTIONS

Read the given paragraph and answer the following questions.

The Earth is round like a globe and to find the exact location of any place, we use a co-ordinate system. This system is based on two numbers: latitude and longitude. Latitude measures the north-south position, while longitude measures the east-west position. Together, they give the precise global address of a place. Latitudes are imaginary lines running east to west. The most important latitude is the Equator, which divides the Earth into the Northern Hemisphere and the Southern

Hemisphere. All latitudes are parallel to each other and the distance between two parallels is about 111 km. Without such references, it would be very difficult to locate places on Earth.

1. If the Equator divides Earth into two halves, what would happen if there were no Equator?
   (a) Earth would stop rotating ☐ (b) Longitude lines disappear ☐
   (c) Latitude distances would change ☐ (d) No hemispheres possible ☐
2. Why is the distance between two latitudes always about 111 km?
   (a) Earth is perfectly flat ☐ (b) Earth is spherical in shape ☐
   (c) Equator controls distances ☐ (d) Longitudes are curved ☐
3. If you only knew the longitude of a place but not the latitude, what problem would you face?
   (a) Distance cannot be measured ☐ (b) Equator cannot be located ☐
   (c) East west unclear ☐ (d) North south unclear ☐
4. Why are latitudes called 'parallels'?
   (a) Run side by side ☐ (b) Meet at poles ☐
   (c) Shorter than longitudes ☐ (d) Controlled by Equator ☐

VI. PROJECT WORK

- Students calculate time differences between India and 5 other countries.
- Present findings in a creative chart or poster.
- Discuss why time zones exist and how they affect travel/communication.

VII. GLOBE READING

Identify the following with the help of a globe.

1. Find the latitudinal and longitudinal extent of your state.
2. Identify the place in India that is surrounded by three seas.
3. Name the states through which the Tropic of Cancer passes.
4. Name the countries that make up the Indian subcontinent.
5. Locate and name the Torrid Zone.

2 Oceans and Continents

Let's Learn About

- Distribution of Water and Land on Earth
- Continents and Islands
- Oceans and Their Features

Let's Gear Up

Riya loved geography and often dreamed of becoming a great explorer. She imagined herself traveling across the huge Pacific Ocean, the biggest in the world, where endless waves shone under the sun. Her ship finally reached the incredible continent of Australia and she was happy to see kangaroos hopping freely across the grasslands. Excited to continue her adventure, Riya crossed the warm waters of the Indian Ocean and arrived in Africa, where the large Sahara Desert stretched endlessly before her eyes. She admired its golden dunes and the strength of life in such a difficult environment. Her journey did not stop there. She sailed again, this time across the Atlantic Ocean, reaching the lively lands of North America. The tall Rocky Mountains amazed her with their snowy peaks and breathtaking. Riya realized that exploring oceans and continents was like opening a treasure chest of wonders, each place offering new lessons and unforgettable experiences for everyone.

Like Riya, let's explore the wondrous world of oceans and continents!

DISTRIBUTION OF WATER AND LAND ON EARTH

Water is very important for life. Earth's surface is covered by approximately 71% water and 29% land. Since Earth has lots of water, it is called the Blue Planet or Water Planet. From

space, Earth looks blue because of oceans, seas, lakes and rivers. All these water areas together form the hydrosphere. Water is a renewable natural resource.

Most of Earth's water, 97.3%, is found in oceans and is salty. Only 2.68% is present in glaciers, ice sheets, and water below the ground. The freshwater available for human use is just 0.03%. This small supply makes water saving very important.

Intext Questions

Water Distribution	(% of total water)
Oceans	97.3
Ice caps and glaciers	2.0
Groundwater	0.68
Freshwater lakes and inland	0.009
Salt lakes	0.009
Atmosphere	0.009
Rivers	0.0001

OCEANS

Oceans are very large water areas that make up most of the hydrosphere. Their average depth is around 4 km. Ocean water keeps moving through currents, waves and tides. All oceans join together, so the surface level stays same, known as sea level, which is used as a base for measuring elevation.

Oceans

The Five Major Oceans:

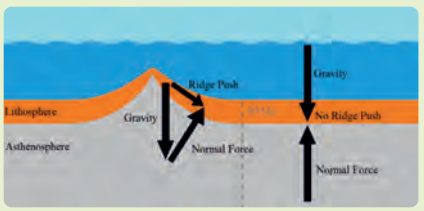
1. Pacific Ocean
2. Atlantic Ocean
3. Indian Ocean
4. Arctic Ocean
5. Southern (Antarctic) Ocean

Key Facts:

- Pacific Ocean: Largest and deepest; home to Mariana Trench (11,022 m).
- Atlantic Ocean: 'S'-shaped, long coastlines ideal for ports and trade.
- Indian Ocean: Triangular, named after India.
- Southern Ocean: Connects with Indian, Atlantic and Pacific Oceans.
- Arctic Ocean: Smallest, surrounding the North Pole, linked to Pacific via Bering Strait.

Do you know?

Underwater Mountains: More mountains exist under oceans than on land. The Mid-Ocean Ridge stretches 65,000 km, mostly underwater.



Mid-ocean ridge

World : Oceans

Importance of Oceans:

1. Provides moisture and water vapor daily.
2. Ocean currents move the sun's heat around Earth.
3. Absorb carbon dioxide, reducing global warming.
4. Separate and connect continents, aiding transport.
5. Facilitate trade and shipping routes.
6. Shelter diverse marine life.
7. Generate hydroelectricity.

Marine life

Oceans and Life:

Marine life includes plankton, fish, turtles, whales, sharks, and seabirds. Ocean plants include algae, seagrass, and seaweeds. Sharks, for example, have lived over 400 million years and can sense electromagnetic fields. Scientists estimate there are millions of marine species, with around 242,000 identified globally today.

In-Text Questions

Fill in the blanks.

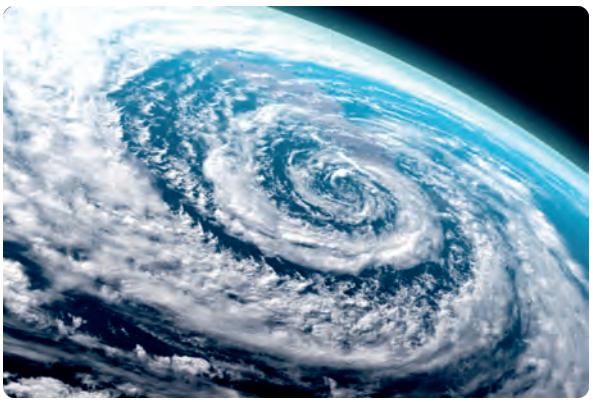
1. The average depth of the oceans is about _____ km.
2. The common level of ocean water is called _____ level.
3. The _____ Ocean is famous for the Mariana Trench.

Oceans and Disasters:

Natural ocean events can be devastating:

- **Tsunamis:** Giant ocean waves caused by underwater earthquakes, volcanic eruptions, or landslides.

A Tsunami



A Hurricane

- **Hurricanes:** Big storms from warm waters causing floods and wind damage.

Marine Pollution

- **Marine Pollution:** Plastics, chemicals and waste hurt sea life and ecosystems.

Climate Change and Rising Sea Levels

- **Climate Change:** Earth's warming melts ice and raises sea levels, causing floods and land erosion.

Do you know?

Famous Disasters:

- 2004 Indian Ocean Tsunami: Over 230,000 deaths across 14 countries; Indira Point submerged.
- Hurricane Katrina (2005): Over 1,800 deaths; $125 billion in damage.

Do you know?

Disaster Management in India:

- Disaster Management Act: 23 Dec 2005.
- NIDM, Delhi: Trains officials, police and agencies for disaster preparedness.

Disaster Management

Disaster Management Team of the Government in Action

In-Text Questions

1. ..... is the biggest ocean on the planet.
2. The Earth is termed a water planet since ..... .
3. The Atlantic Ocean broadly resembles the letter ..... in shape.
4. Water is an ..... resource.
5. The Indian Ocean is named after ..... .
6. Oceans hold Earth's ..... % of water found on the surface.
7. ..... is the busiest sea route for trade and commerce.
8. The North Pole is encircled by ..... .
9. NIDM stands for ..... .
10. The Disaster Management Act was announced on ..... .

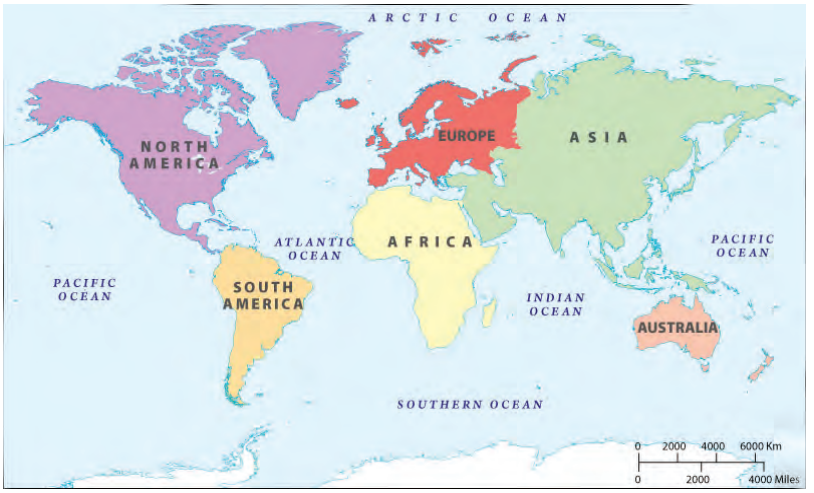
Analyze Thoughts

Explain the importance of the hydrosphere in daily life. Prepare a list of its functions and share them with your friends and teachers. Also explain simple actions you may adopt to conserve water.

CONTINENTS

Continents are large land areas that stand above sea level. They formed over millions of years because of the movement of tectonic plates. Earth's outer layer is made of tectonic plates that are always moving. Long ago, all the continents were joined together as one huge landmass called Pangaea. As the tectonic plates moved, Pangaea slowly broke into smaller parts and formed today's continents. Large oceans separate the continents from each other. Earth has seven continents: Asia, Africa, North America, South America, Antarctica, Europe, and Australia. A world map shows that most of Earth's land is in the Northern Hemisphere. Asia, Europe, and North America is entirely in the Northern Hemisphere, while Australia and Antarctica are completely in

the Southern Hemisphere. For this reason, the Northern Hemisphere is called the Land Hemisphere.



Seven Continents on the Earth

Facts About Continents:

- Asia: Largest continent, home to half the world's population, separated from Europe by the Ural Mountains and Ural River.
- Africa: Second largest continent, called the Dark Continent; lies in all four hemispheres; home to the Nile River and the Sahara Desert.
- North America: Third largest continent, connected to South America by the Isthmus of Panama.
- South America: Fourth largest, almost triangle-shaped; home to the Amazon River.
- Antarctica: Fifth largest, uninhabited, covered with thick ice, called the Frozen Continent.
- Europe: Sixth largest; divided from Asia by the Ural mountains and the Ural river.
- Australia: Smallest continent, also a country, surrounded by water (Island Continent).

Do you know?

India and several other nations have established their research stations in Antarctica. Maitri and Barati are the principal research centres of India located there.

Islands

An island is a piece of land that is fully surrounded by water. Islands are found in oceans, seas, rivers and lakes. They form differently. Some islands are created by eruptions of underwater volcanoes, while others form from the shifting of Earth's tectonic plates. The collection of coral pieces and other natural materials can also help form new islands over time. Islands provide things like fish, wood, and rich soil for farming. They

The Andaman Island

Barren Island: An active volcano

are also popular tourist places due to beautiful views, beaches, and animals. India has more than 1300 islands. Lakshadweep and the Andaman and Nicobar Islands are the main island groups of India. The Lakshadweep Islands are found in the Arabian Sea area. They are known as coral islands because they are formed from corals, which are the hard remains of tiny polyps. They comprise many small coral reefs. The Andaman and Nicobar Islands are located in the Bay of Bengal. Most of these islands are volcanic. Barren Island in the Andaman and Nicobar group is India's only active volcano.

Do you know?

Corals are the hard remains of very small sea creatures known as polyps. When these living polyps die, their hard skeletons remain behind. Gradually, new polyps develop over these skeletons. In this manner, the structure keeps rising layer by layer and finally forms coral islands.

In-Text Questions

1. Biggest continent _____
2. Africa is also known as _____
3. Longest river in the world _____
4. Largest desert on Earth _____
5. Continent covered with ice _____
6. Continent surrounded by water _____
7. India's only active volcano _____

In-Text Questions

Why are continents different from islands?

Continents are surrounded by water as well, but due to their enormous size, they are not called islands. For instance, the smallest continent, Australia, is nearly three times bigger than Greenland, the largest island.

Beautiful landscape of islands

Analyze Thoughts

Consider the different ways humans utilize land.

NEW TERMS

- **Oceans:** Large bodies of saltwater
- **Isthmus:** Narrow land connecting landmasses
- **Hydrosphere:** All water on Earth
- **Atmosphere:** Layer of gases around Earth
- **Continents:** Large land areas on Earth
- **Disaster:** An event causing serious damage
- **Island:** A piece of land surrounded by water
- **Eurasia:** Europe and Asia combined
- **Natural Disasters:** Destructive events caused by nature
- **Earthquake:** Sudden shaking of Earth's surface
- **Flood:** Excess water covering land
- **Disaster Management**: Planning to handle disasters

QUICK TAKE

- Large bodies of salty water that cover most of Earth are known as oceans.
- More than 71% of Earth is covered with water, while only 29% is land, showing that our planet has lots of water.
- Earth has five main oceans: Pacific Ocean, Atlantic Ocean, Indian Ocean, Arctic Ocean and Southern/Antarctic Ocean.
- Since Earth has a large amount of water, it is also called the Blue Planet or Water Planet.
- The Arctic Ocean is the smallest ocean and remains mostly covered with ice during the whole year.
- The Atlantic Ocean looks like the letter S and has many natural harbours for ships and trade.
- The Pacific Ocean is the biggest and deepest ocean on Earth, spreading across many nations.
- In the past, all continents were connected to make one huge landmass called Pangaea.
- Continents are very large pieces of land above sea level where most people live on Earth.
- The constant movement of tectonic plates can cause earthquakes, volcanoes and other natural hazards.
- Lakshadweep and the Andaman and Nicobar Islands are India's main island groups, famous for their beauty and rich biodiversity.
- Earth has seven continents: Asia, Africa, North America, South America, Antarctica, Europe and Australia, each different in size and culture.
- An island is a land area completely surrounded by water, whether it is large or small.
- Asia is the largest continent with the highest population, while Australia is the smallest continent.

EXERCISES

I. OBJECTIVE TYPE QUESTIONS

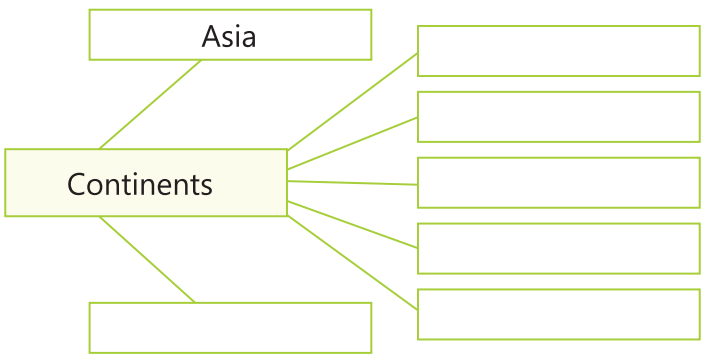
A. Choose the correct answer.

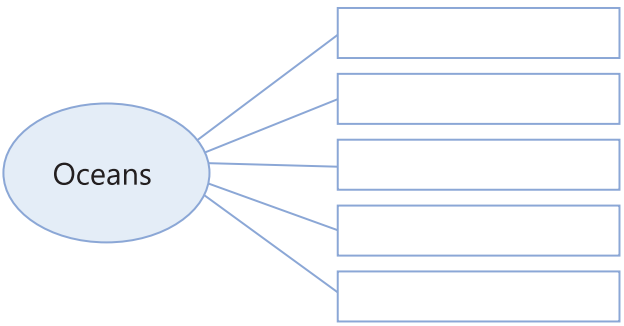
1. Which continent is the biggest continent on Earth?

   (a) Asia ☐ (b) Europe ☐ (c) North America ☐ (d) Australia ☐

2. Which place was covered by seawater during the 2004 Tsunami?
   (a) Nanda Devi ☐ (b) Palk Strait ☐ (c) Indira Point ☐ (d) Port Blair ☐
3. The Government of India approved the Disaster Management Act in which year?
   (a) 2004 ☐ (b) 2003 ☐ (c) 2006 ☐ (d) 2005 ☐
4. Which mountain range acts as a natural boundary between Asia and Europe?
   (a) Himalayas ☐ (b) Ural ☐ (c) Atlas ☐ (d)All of these ☐
5. A disaster is a ..... event that causes major damage or loss of life.
   (a) natural ☐ (b) human-made ☐
   (c) both a and b ☐ (d) none of these ☐

B. Fill in the blanks.





C. Choose the option that correctly matches Column A with Column B.

Column A	Column B
1. Australia	(i) Frozen continent
2. Antarctica	(ii) Dark continent
3. Asia	(iii) Roughly triangular in shape
4. Africa	(iv) Smallest continent
5. South America	(v) Largest continent

(a) 1.-(i), 2.-(iii), 3.-(iv), 4.-(ii), 5.-(v)
(b) 1.-(i), 2.-(iv), 3.-(ii), 4.-(v), 5.-(iii)
(c) 1.-(iv), 2.-(i), 3.-(ii), 4.-(v), 5.-(iii)
(d) 1.-(iv), 2.-(i), 3.-(v), 4.-(ii), 5.-(iii)

D. Write 'T' for True or 'F' False.

1. The combined landmass of Asia and Europe is known as Eurasia. ☐
2. The Indian Ocean is named after the country of India. ☐
3. The River Nile flows through Australia. ☐
4. The Andaman and Nicobar Islands are located in the Arabian Sea. ☐
5. The Mariana Trench is the deepest point in the Atlantic Ocean. ☐

E. Assertion-Reason

For questions 1 to 4, two statements are provided—one labelled Assertion (A) and the other labelled Reason (R). Select the correct answer for each question from the options (a), (b), (c), and (d) as mentioned below:

1. **Assertion (A)** : The Atlantic Ocean has an 'S' shape.
   Reason (R) : The Arctic Ocean is the largest of all oceans.
2. **Assertion (A)** : Earth is referred to as the "Blue Planet."
   Reason (R) : Water covers more than 70% of the Earth's surface.
3. **Assertion (A)** : Europe is known as the "Dark Continent."
   Reason (R) : Australia is the smallest continent in the world.
4. **Assertion (A)** : The Lakshadweep Islands are found in the Arabian Sea.
   Reason (R) : These islands are called coral islands because they are formed from coral skeletons.

(a) Both Assertion (A) and Reason (R) are correct and Reason explains Assertion.

(b) Both Assertion (A) and Reason (R) are correct but Reason doesn't explain Assertion.

(c) Assertion (A) is correct but Reason (R) is incorrect.

(d) Assertion (A) is incorrect but Reason (R) is correct.

II. SHORT ANSWER TYPE QUESTIONS

1. What are the causes of disasters occurring in the oceans?
2. What makes Earth known as the Blue Planet?
3. List three characteristics of the continent of Asia.
4. Write a brief description of marine life in the oceans.
5. Explain why the ocean's surface level remains constant across the globe.

III. LONG ANSWER TYPE QUESTIONS

1. Discuss two major oceanic disasters.
2. Explain why the Atlantic Ocean serves as the world's main trade and commerce route.
3. Write about the significance of oceans in our ecosystem.
4. Describe the plant and animal life found in the oceans.
5. Explain the process of island formation.

IV. PICTURE STUDY

1. What natural event is shown in the picture?
2. How can people stay safe during such a natural event?
3. Why are coastal areas more affected by these events?

V. Read the given paragraph and answer the following questions.

Earth is known as the Blue Planet because more than 71% of its surface has water, mainly salty oceans (97.3%), leaving only 0.03% as freshwater for people. Oceans are connected, control climate, support sea life and join continents for trade and travel. Continents are huge land areas made by tectonic changes; long ago, all land was together as Pangaea, then it slowly split into seven continents. Islands, made by volcanoes or coral growth, give resources, fertile land and tourism opportunities. This shows that freshwater conservation and ocean protecton are very important.

1. If only 0.03% of Earth's water is available as freshwater for people, what does this show about our duty?
   - (a) Use freely ☐ (b) Save water ☐
   - (c) Clean oceans ☐ (d) Endless rivers ☐
2. Oceans are connected and keep the same sea level. Why is this useful for human activities?
   - (a) Measure land ☐ (b) Trade and travel ☐
   - (c) More freshwater ☐ (d) Larger islands ☐
3. The splitting of Pangaea into seven continents teaches us that:
   - (a) Seven continents ☐ (b) Earth changes ☐
   - (c) Oceans form ☐ (d) Coral islands ☐
4. Islands are created by volcanic action or coral growth. What benefit do they give humans?
   - (a) Decrease continents ☐ (b) Resources, tourism ☐
   - (c) More freshwater ☐ (d) Stop tectonic changes ☐

Continents and Oceans Fact File

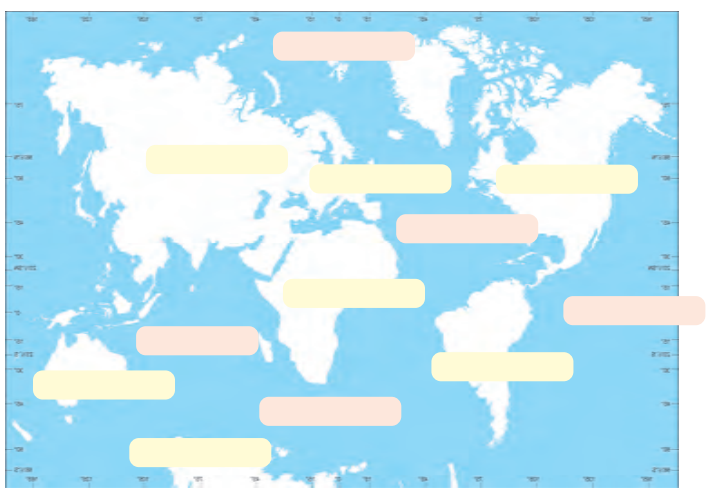
1 Each student prepares a booklet with key facts:
- Continent info: area, population, key countries, landmarks and unique features.
- Size, depth and importance of each ocean.

2 Present as a classroom exhibition.

MAP SKILL

- Use the words from the box below to label the continents and oceans of the world.
  (Hint: Continents are the yellow boxes and oceans are the pink boxes on the globe.)

Asia	North America	Africa
Arctic Ocean	Atlantic Ocean	Indian Ocean
South America	Europe	Antarctica
Australia	Pacific Ocean	Southern Ocean



3 Landforms and Life

Let's Learn About

- Mountains
- Plateaus
- Plains

Let's Gear Up

Ravi and Meera set out on a journey with their parents to explore India's diverse landforms. Their first stop was the majestic Himalayas, where they admired snow-covered peaks and watched yaks grazing peacefully in the cold climate. Next, they travelled to the Thar Desert, where the scorching sun beat down on golden sands and camels carried people across the dry land. Finally, they reached the lush-coastal plains of Kerala, where fishermen prepared their boats to sail into the Arabian Sea. As they moved from mountains to desert to coast, Ravi observed how people's houses, clothes, food and even animals were different. He began to wonder how landforms shape the way humans and animals live and adapt.

Like Ravi and Meera, let us explore some landforms in this chapter too. The hard outer layer of the Earth where we live is called the lithosphere. The lithosphere is not a flat and even surface, but has

many types of landforms. A landform is a natural feature found on Earth's surface like plains, mountains, valleys, plateaus and hills. Different landforms are created by Earth's processes over millions of years due to changes such as plate movement, volcanic activity, weathering and erosion. Landforms are mainly grouped into three types – Mountains, Plateaus and Plains. Let us learn more about them in this chapter ahead in greater detail.

The scientific study of landforms and their processes is known as Geomorphology.

MOUNTAINS

Mountains are natural high parts of the Earth's surface. The word 'mountain' is usually used for any area of land that rises steeply above the nearby areas. Mountains are different from plateaus because they usually have a small summit area. They are also different from what are commonly called hills because they have much greater height than hills.

The height or elevation of a mountain is measured as the height of its peak above sea level. Therefore, a mountain with an elevation of 4,000 m may rise only 3,000 m above the nearby land. Mountains are usually found in groups or ranges made of peaks, ridges and intermontane valleys. Except for some mountains that stand alone, the smallest unit is a range that includes either one single complex ridge or a group of ridges that are usually similar in origin, age and shape. Many closely connected ranges arranged in parallel lines or chain-like groups are called a mountain system, while a long series of such systems makes a mountain chain too.

How is weathering different from erosion? Usually, people think that weathering and erosion are the same. However, in reality, weathering involves only the breaking down of rocks. The movement of these broken rock materials is not part of weathering. It is included in the process of erosion.

Characteristics of Mountains

- Mountains have wide bases and sharp tops forming a peak.
- They have a colder climate compared to plain areas.
- Mountains act as sources of glaciers/reservoirs of ice that provide water to rivers.
- Mountain ranges are usually found running parallel to each other.

Types of Mountains

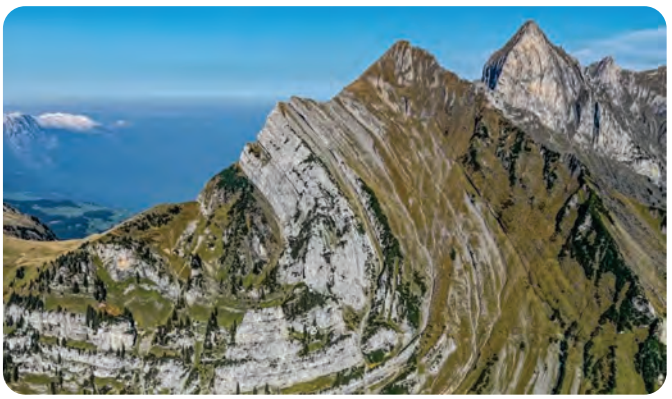
Generally, mountains can be divided into four main types. They are:

(a) Young Fold Mountains

Mountains that were formed in recent times are known as young fold mountains. Ranges like the Himalayas, the Alps, the Andes and the Rockies are examples of young fold mountains.

(b) Old Fold Mountains

Mountains that were formed long ago are called old fold mountains. The Urals, the Appalachians, the Tien Shan and the Aravallis are some famous examples of old fold mountains.



Old Fold Mountains

Block Mountains

(c) Block Mountains

These mountains are formed due to tectonic movements. When the Earth's crust breaks into many blocks because of pressure, some rock blocks rise upward while others move downward. The raised blocks of the Earth's surface are known as block mountains. The Black Forest (Germany), Vosges Mountains (France), Sierra Nevada (California) and Salt Range (Pakistan) are examples of block mountains.

(d) Volcanic Mountains

Volcanic mountains are formed when lava cools and becomes hard on the Earth's surface. Etna (Italy), Kilimanjaro (Tanzania), Cotopaxi (Ecuador), Krakatoa (Indonesia) and Fujiyama (Japan) are examples of volcanic mountains.

Volcanic Mountains

The table given below presents the important mountains of the world.

	Mountain	Continent
1	Verkhoyansk	Asia
2	Stanovoy	Asia
3	Kolyma	Asia
4	Sayan	Asia
5	Altai	Asia

	Mountain	Continent
16	Brooks	North America
17	Alaska	North America
18	Rocky	North America
19	Appalachians	North America
20	Andes	South America

	Mountain	Continent
6	Kunlun	Asia
7	Himalayas	Asia
8	Aravallis	Asia
9	Vindhyas	Asia
10	Satpura	Asia
11	Tien Shan	Asia
12	Pamir	Asia
13	Atlas	Africa
14	Great Karoo	Africa
15	Drakensberg	Africa

	Mountain	Continent
21	Alps	Europe
22	Pyrenees	Europe
23	Scandinavian Mountains	Europe
24	Balkan Mountains	Europe
25	Carpathian Mountains	Europe
26	Cantabrian Mountains	Europe
27	Apennines	Europe
28	Urals	Europe
29	Great Dividing Range	Australia
30	Musgrave Range	Australia

Do you know?

- **A Mountain Range :** It is a long line of mountains and hills with many peaks, summits and valleys.
- **Mountain Chain:** It is made up of many long, narrow and parallel mountain ranges.
- **A Mountain System:** A group of several mountain ranges is known as a mountain system.
- **A Cordillera:** It refers to many mountain groups and systems, for example, the Western Cordillera in North America.

Major Mountains of the World

Do you know?

Climbing Routes to Mount Everest

Mount Everest has two major climbing routes.

(i) The south-east ridge from Nepal.

(ii) The north-east ridge from Tibet.

Important Climbers

(I) Edmund Hillary from New Zealand and Tenzing Norgay Sherpa from India were the first people to climb Mount Everest at 11:30 a.m. local time on 29th May, 1953.

Tenzing Norgay Sherpa

(ii) Junko Tabei of Japan became the first woman to reach the peak on 16th May, 1975. Bachendri Pal was the first Indian woman to climb Mt. Everest on 23rd May, 1984. She reached the summit at 1:07 p.m. (IST). She received the Padma Shri in 1984 and the Padma Bhushan in 2019.

(iii) On 8th May, 1978, Reinhold Messner (Italy) and Peter Habeler (Austria) completed the first climb without using supplemental oxygen.

Santosh Yadav

(iv) Santosh Yadav, an Indian Indo-Tibetan Border Police woman, reached Mt. Everest in the years 1992 and 1993.

(v) Arunima Sinha lost her leg in an accident at the age of 22. With strong determination, she climbed Mount Everest in 2013. She did not stop there, but continued to climb the highest peak of each continent. She was awarded the Padma Shri in 2015.

Arunima Sinha

Mountain Environment

Mountains are homes for many kinds of plants and animals that can live in high places, rough land and very cold or cool weather. In very cold places at great heights, mosses, lichens and alpine plants grow. At lower heights, where the weather is less cold, mountain forests are found with trees like pine, spruce, fir and cedar. These trees are tall, cone-shaped and have thin needle-like leaves to save water from loss by transpiration. At still lower heights, trees like oak, maple and birch grow. Many kinds of shrubs, grasses and wildflowers also grow in these mountain areas.

Spruce tree

Pine tree

Many types of animals like mammals, birds, insects, reptiles and amphibians are found in mountain areas too. Brown bears, Himalayan tahr goats, yaks, snow leopards, mountain lizards, Peregrine falcons, Canadian

Lynx, grey foxes and ibex are some of the main animals living there. The Golden Eagle, Himalayan Monal and Alpine Chough are some of the important mountain birds found in these regions around the world.

Himalayan tahr

Mountain lizard

Grey fox

Mountain goats

Peregrine falcon

Golden eagle

Life in the Mountains

You have learned about the rough landforms, fewer plants and the very cold or cool climate of the mountains. By now, you know how difficult it is to live in the mountains. Life in the mountains has many daily problems, but it also offers different opportunities because of its unique scenery. The steep and rough land of the mountains makes farming and transport very hard for the people too.

Go Further

Terrace farming or cultivation is a method of farming in which hill slopes are changed into flat fields made in steps. The edge of each field is raised to hold water in the land. This method is best suited for growing rice.

People mostly stay in valleys between mountains. Houses have sloping roofs so that snow and rainwater can slide off easily and thick walls to provide warmth. Wood and stone are commonly used to make houses. People do terrace farming by building flat steps on steep mountain slopes. The main crops they grow are potatoes, barley, rice and maize. They also raise animals like cows, sheep, goats and yaks for milk, meat and wool.

People who live in mountains have a special traditional culture and enjoy many festivals connected with nature, the changing seasons and crop harvests. They have strong community bonds and live closely with each other in a group.

Terrace farming

Houses with steep slopes

Mountains often face natural disasters like very cold temperatures, heavy snowfall, avalanches, cloud bursts, earthquakes, floods and landslides. Problems also happen due to human-made disasters like cutting trees, overgrazing and uncontrolled tourism activities.

Earthquake

Cloud Burst

Paragliding

Landslides

Some people visit the well-known temples located in the mountains. People also go to the mountains to witness the beautiful views, fresh air and the chance to enjoy snow, which is usually not found in the plains. They also feel calm and comforted and develop a strong bond with nature. In recent years, tourism has become the main source of employment and income source for the people living in the mountains. Thousands of tourists visit the mountains for hiking, skiing, paragliding and mountaineering every single year.

Hiking

Significance of Mountains

- Mountains are a major source of water for rivers.
- They provide many types of building materials.
- They are the homes of many wild animals and birds.
- Mountains are also well-known as popular tourist spots.
- Mountains provide a lot of oxygen and help indirectly in bringing rain.
- Many valuable stones like diamonds, rubies and others are found in the mountains.

In-Text Questions

1. The Himalayas are the …… fold mountains.
2. ……. and …… are examples of old fold mountains.
3. …… is a block mountain.
4. …… movement is responsible for the formation of block mountains.
5. …… cultivation is practised on the hilly slopes.
6. In recent years, …… has become the main occupation and source of income for people living in the mountains.

PLATEAUS

A plateau is a large landform that stands high above the surrounding land on at least one side. It is also known as a tableland because it has a flat top like a table. Its height may range from a few hundred to several thousand metres. A plateau can be formed by erosion, volcanic activity or the rising of the Earth's crust.

Characteristics of Plateaus

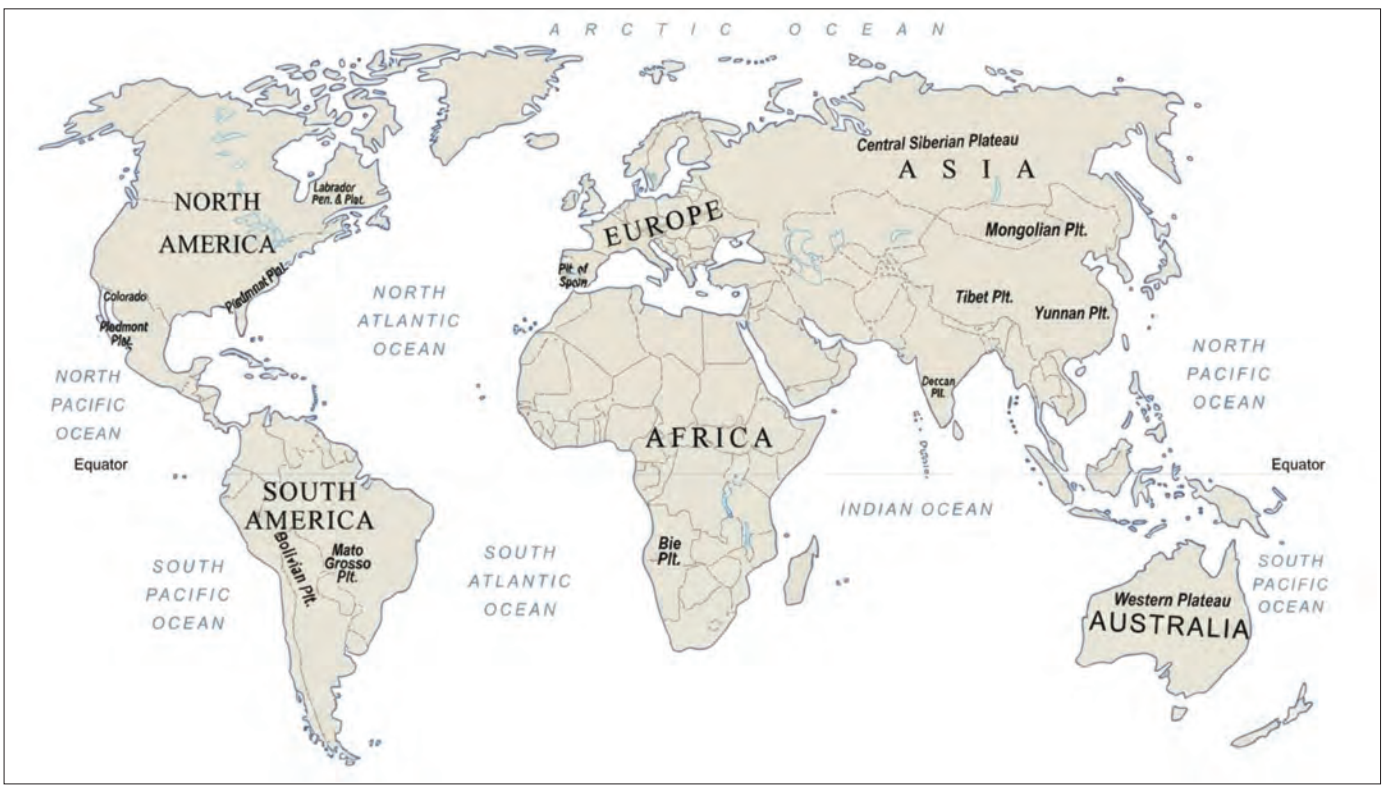
- Plateaus are large landforms that spread over wide areas of land.
- They have flat or slightly uneven surfaces, making them different from the nearby lowlands.
- Their height ranges from a few hundred metres to several thousand metres.
- Plateaus usually have steep sides along their edges, though some have one steep side and one gentle side.

Distribution of Plateaus

- Deccan Plateau in India
- East African Plateau in Kenya, Tanzania and Uganda
- Western Plateau of Australia
- Tibetan Plateau in China

Analyze Thoughts

Suppose you get a chance to live in the mountains for one year. You are completely new to that area. Write a note about the difficulties you may face and the measures you will take to make your life easier and more comfortable there.



Different Plateaus of the World

Different Plateaus of the World

- Central Siberian Plateau, located in Russia
- Mongolian Plateau, located in Mongolia
- Bié Plateau, located in Africa
- Spanish Plateau, located in Europe
- Colorado Plateau, located in North America
- Bolivian Plateau, located in South America

Life in the Plateaus

Plateaus have mild to cool weather and low moisture. Most plateaus have steep sides and flat tops. Their land is quite flat compared to mountains and valleys. The flat tops are used for building homes and villages. Plateaus also have rich soil that is good for farming, where crops like wheat, barley, maize and potatoes are often grown. Step farming is also practised on plateaus with gentle slopes. Animals like donkeys and mules are kept for carrying loads and people.

Plateaus have many minerals like coal and iron ore and mining is an important industry in these areas. Tourism is another major activity as visitors come to enjoy plateaus for their beauty, walking and camping. Plateaus also have many waterfalls.

Do you know?

- The Tibetan Plateau, in Central Asia, is the highest and largest plateau on Earth. It is also called the "Roof of the World." It has an average height of 4,500 m and stretches nearly 2,500 km from east to west.
- The East African Plateau is well-known for its gold and diamond mines.
- The Deccan Plateau of India is famous for its fertile black soil and vast volcanic rock formations.
- The Colorado Plateau in the United States is famous for the Grand Canyon.

Water Falls

Waterfalls are formed when rivers and streams flow over the edges of plateau ridges. These waterfalls create beautiful scenery that attracts many tourists every year. Some famous waterfalls on Indian plateaus are Jog Falls in Karnataka, Dhuandhar Falls in Madhya Pradesh (Deccan Plateau), Nohkalikai Falls in Meghalaya near Cherrapunji (Shillong Plateau), Chitrakote Falls in Chhattisgarh, and Hundru Falls on the Subarnarekha River (Chota Nagpur Plateau).

Nohkalikai Falls

Jog Falls

Importance of Plateaus

- Plateaus are rich in minerals. Many mining companies are located in plateau regions. Plateaus are often called the "storehouses of minerals." For example, the Chota Nagpur Plateau in India has large deposits of coal, manganese, and iron ore.
- Plateaus are popular tourist places. They have beautiful landscapes and waterfalls. The Deccan Plateau of India is a famous tourist destination.
- When rivers flow down from high plateaus, they form waterfalls.

  Hydroelectricity is produced by using the falling water.
- Some plateaus are formed by volcanic activity. These plateaus provide black soil and are suitable for farming. Black soil is ideal for cotton cultivation.
- Plateaus are also good places for humans to live because of their flat land and fertile soil.

Do you know?

- The Chitrakote Waterfall in Chhattisgarh is the largest and most water-logged (widest) waterfall recognized in India's. The horseshoe-shaped waterfall creates a stunning sight and it is famous as the "Niagara Falls of India".
- Jog Falls is formed by the Sharavathi River and is divided into four segments: Raja, Rani, Rover and Rocket. It is one of the highest waterfalls in India.
- Kunchikal Falls in the Shimoga District of Karnataka is the highest cascading waterfall in India with a height of 1,493 feet.
- The Nohkalikai Falls drops down 340 metres from the Cherrapunji Plateau.
- Dudhsagar Falls, formed by the Mandovi river is known as the 'Sea of Milk',
- Ranchi, the capital city of Jharkhand is known as the City of Waterfalls in India.

Dudhsagar falls

PLAINS

Plains are low and flat lands. They usually have nearly the same level everywhere. They are mostly made by rivers.

Characteristics of Plains

- Generally, plains are not higher than 200 metres above the average sea level.
- They are ideal for people to live on and for building things like roads, towns, schools, and hospitals.
- The soils of plains are very fertile and best suited for farming.
- Many plains have numerous rivers, which are useful for irrigation, transport, fishing, and other activities.
- Plains usually have a large population because of their fertile soil, easy water supply, and flat land.

In-Text Questions

State True or False.

1. Plateaus have flat tops.
2. Plateaus are colder than mountains.
3. The Deccan Plateau is known as "The Roof of the World".
4. Terrace cultivation is practised on plateaus.
5. Tourism is a major activity on the plateaus.

Formation of Plains

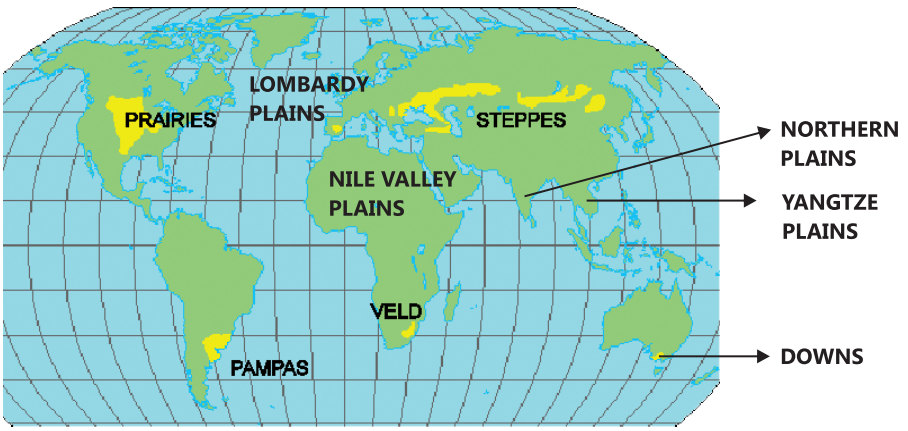
Plains are mainly formed by the deposit of silt and sediments brought by rivers and their tributaries.

Plains may be completely flat or gently rolling.

Most plains are very fertile and suitable for farming activities.

Distribution of Plains

- Northern Plains of India
- Nile Valley Plains in Africa
- Yangtze Plains in China
- Prairies of North America
- Pampas of South America
- Downs Grasslands in Australia
- Lombardy Plains in Italy
- Velds Grasslands in Africa



Plains of the World

Life in the Plains

Plains usually have a mild climate. They are not too cold or too hot, so people can live there easily. The good weather, enough water from rivers and lakes, rich soil and level land make plains some of the most heavily populated places in the world.

Farming is the main work of people living on the plains. Fertile soil and big fields grow many crops like wheat, rice, maize, barley, millets, vegetables and fruits. Fibre crops like jute, cotton and hemp are also grown. The large river systems give a ample water supply to the fields. In many places, farmers grow different crops all through the year. Cows, buffaloes, goats and sheep are kept for milk, meat and wool. Fishing is important for people living near rivers and lakes. People in plains also work in areas like education, health, science, research, shops and industries.

People usually live in homes built with bricks, wood and cement. In cities, flats, tall buildings, and skyscrapers are common. Travel is easier in plains because the land is flat. They have many roads, railways, and airports. Good transport supports trade and business between far places in the country. Waterways and pipelines are more developed in plains than in other areas. Waterways help move goods and people, and boating is also done on rivers and lakes.

These areas have high industrial development, farming, mining, and big markets where traders and buyers exchange agricultural and industrial products.

Tourism also provides livelihood for people in plains. For example, the Taj Mahal in Agra and the Buddhist Stupas of Sarnth in Uttar Pradesh, are major tourist attractions in the world.

River Ganga

Taj Mahal

People who live in the plains have different and various cultural traditions. They celebrate many festivals related to crops and other events. Rivers are an important part of their lives, so they respect and worship rivers along with nature. Many

holy cities are found near riverbanks, where many visitors come during special times. Prayagraj (Allahabad), where the Ganga and Yamuna rivers meet, is visited by millions of people every year. They come there to pray and take part in religious ceremonies.

Sangam in Prayagraj

Many kinds of plants and animals are found in the plains. Large areas of crop fields, grasslands, and forests cover these regions. Different types of flowers and trees grow here. The animals mostly include deer, rabbits, elephants, and many kinds of birds.

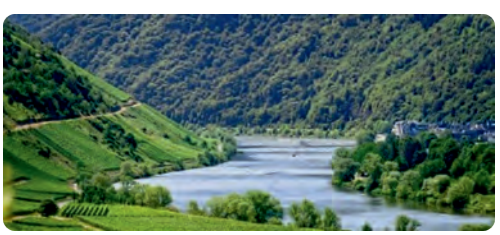
Tiger

Go Further

The Indo-Gangetic Plain, also called the North Indian River Plain, located in the Indian subcontinent, is one of the most fertile and densely populated areas in the world. It stretches across northern India and extends into Pakistan and Bangladesh. It is named after the two main rivers that flow through it, the Indus and the Ganges. The plain also includes the Brahmaputra River basin in the eastern part. Covering an area of about 700,000 sq km, it is one of the largest plains in the world. It is famous for its fertile soil, making it one of the most productive farming regions globally. This plain is covered with thick layers of fertile alluvium. Three major rivers—the Indus, the Ganges and the Brahmaputra—water this plain. Crops such as rice, wheat, sugarcane, maize, gram, millets and many fruits and vegetables are grown here. These plains are also major tourist attractions with numerous monuments, ancient structures, gardens, temples and mosques.

In recent times, overpopulation, pollution, depletion of underground water, loss of farmland, and flooding have caused significant environmental degradation of these plains. Sewage and industrial waste from cities in this region flow directly into the Ganga, the Brahmaputra, and their tributaries. Air pollution is also a serious problem. Motor vehicles release harmful gases in large amounts, causing health issues for people living here.

Importance of Plains



Indo-Gangetic Plains

- Plains have fertile soils, making them ideal for farming and agricultural activities.
- Their climate is suitable for human living. Easy access to water and flat land allows the simple construction of houses.
- Plains are flat, which makes building transport networks like roads, railways and airports easier.
- Plains include forests, grasslands and wetlands that support many kinds of plants and animals.

Analyze Thoughts

Among the three landforms studied in this chapter, which one would you choose to build your house on, and why?
Give reasons to support your answer.

Do you know?

"Namami Ganga Programme"

To protect the river Ganga from pollution, the Ganga Action Plan was launched several decades ago. The dense population in the region has caused damage to many rivers and their tributaries. Now, the Ganga Action Plan has been replaced by a national-level programme for cleaning rivers. To conserve the river Ganga, the "Namami Ganga Programme" has been launched with two main objectives—effective control of pollution and the conservation and rejuvenation of the National River Ganga.

In-Text Questions

State True or False.

1. Plains have a small population.
2. Plains have many rivers and lakes.
3. Prairies are located in North America.
4. Farming is the main occupation of people living in the plains.
5. Plains do not have a well-developed transport system.

IMPORTANT TERMS

- **Weathering:** Rocks breaking down naturally
- **Mountains:** Naturally elevated landforms
- **Lithosphere:** Earth's rigid outer layer
- **Plateau:** Flat highland with steep sides
- **Avalanche:** Rapid snow descent
- **Landforms:** Natural surface features
- **Soil:** Upper layer of Earth
- **Valleys**: Low land between hills
- **Canyon:** Deep narrow valley
- **Elevation**: Height above sea level
- **Intermontane:** Between mountain ranges
- **Ridge:** Narrow elevated land strip
- **Summit:** Mountain's highest point
- **Climate:** Long-term weather patterns
- **Plains:** Flat low-lying land

QUICK TAKE

- Steep and rocky mountains make growing crops and travelling from place to place very hard.
- Mountains have four main types: Young Fold, Old Fold, Block and Volcanic Mountains too.
- The solid outer layer of Earth where we live is called the lithosphere.
- Hills and peaks rise above the land and form high areas called beautiful mountains.
- A plateau is a wide, flat area raised above nearby land and is called a tableland.
- Rivers flowing down high plateaus often create spectacular waterfalls along their path.
- Plateaus have useful minerals like coal, iron and other natural resources.
- Plateaus can form through river erosion, volcanic eruptions or tectonic plate movements too.
- Plains are wide flat lands that are good for towns, roads and buildings.
- Many plains have big rivers that help with irrigation, transport, fishing and more.
- Farming is the main work of people living on fertile open plain areas.
- Plains are often formed by layers of silt and sediments left by flowing rivers.
- Fertile soil, water and flat land attract many people to plains areas.

I. OBJECTIVE TYPE QUESTIONS

A. Choose the correct answer.

1. Which of the following is not a mountain created by volcanic activity?
   (a) Kilimanjaro ☐ (b) Krakatoa ☐ (c) Andes ☐ (d) Fujiyama ☐
2. The Dhuandhar Falls are an example of _____ .
   (a) a cascade ☐ (b) a highland ☐
   (c) a water body ☐ (d) a hill ☐
3. The solid outer layer of the Earth where we live is called the _____ .
   (a) Air layer ☐ (b) Lithosphere ☐ (c) Life zone ☐ (d) Water layer ☐
4. Animals that live in the plains include _____ .
   (a) Tigers ☐ (b) Monkeys ☐ (c) Hares ☐ (d) All of these ☐
5. Which of the following does not describe the feature of mountains?
   I. Mountains have a wide bottom and a pointed peak.
   II. They experience a cooler climate compared to lowlands.
   III. They have an even surface which makes building transport routes simple.
   IV. They contain glaciers that act as major sources of river water.
   (a) I and II ☐ (b) Only III ☐ (c) III and IV ☐ (d) Only IV ☐

B. Write 'T' for True or 'F' False.

1. The Deccan Plateau has rich minerals and black fertile soil. ☐
2. Rivers create fertile plains suitable for farming. ☐
3. Plains are generally found at lower heights, not high areas. ☐
4. The Indo-Gangetic Plain is fertile and densely populated. ☐
5. The Himalayas are a chain of connected mountains. ☐

C. Choose the option that correctly matches items from Column A and B.

Column A	Column B
1. Alps	(i) North America
2. Prairies	(ii) Young Fold Mountain
3. Indo-Gangetic Plains	(iii) Africa
4. Nile Valley Plains	(iv) India

(a) 1.-(ii), 2.-(i), 3.-(iv), 4.-(iii)
(b) 1.-(iv), 2.-(ii), 3.-(i), 4.-(iii)
(c) 1.-(i), 2.-(iv), 3.-(ii), 4.-(iii)
(d) 1.-(iii), 2.-(iv), 3.-(i), 4.-(ii)

D. Assertion-Reason

For question numbers 1 to 4, two statements are given—one called Assertion (A) and the other called Reason (R). Choose the correct option from (a), (b), (c) and (d) given below:

1. **Assertion (A)** : Landforms are not identical everywhere on Earth.
   Reason (R) : Mountains have low temperatures and uneven, rough surfaces.

2. **Assertion (A)** : Different types of landforms are formed by various geological processes over millions of years.
   Reason (R) : More than 70% of the Earth's surface is covered by water.
3. **Assertion (A)** : Plateaus generally have steep slopes on all sides.
   Reason (R) : Plateaus do not have mineral resources.
4. **Assertion (A)** : The plains of the Ganga and the Brahmaputra are thinly populated.
   Reason (R) : These plains contain fertile alluvial soil.

(a) Both Assertion (A) and Reason (R) are correct and Reason properly explains the Assertion.

(b) Both Assertion (A) and Reason (R) are correct but Reason does not explain the Assertion.

(c) Assertion (A) is correct but Reason (R) is incorrect.

(d) Assertion (A) is incorrect but Reason (R) is correct.

II. SHORT ANSWER TYPE QUESTIONS

1. Explain the different types of mountains.
2. How do mountains help greatly in human life?
3. State the importance of plateaus.
4. Write a short description of living conditions in the plains.

III. LONG ANSWER TYPE QUESTIONS

1. Explain why plains have a much bigger population compared to mountain areas.
2. Describe the importance of plateaus and mountains in human life.

IV. DISTINGUISH BETWEEN THE FOLLOWING

1. Plains and Tablelands
2. Mountains and Lowlands
3. Block Mountains and Volcanic Mountains
4. Young Fold Mountains and Old Fold Mountains

V. PICTURE STUDY

Look at the image carefully and answer the following questions based on what you see and what you've learned about plateaus.

1. What is the name of this landform with a flat top and steep sides?
2. How are plateaus different from mountains by their surface?
3. Name one famous plateau in India .
4. Which economic activities are commonly practised on plateaus (farming, mining or fishing)?

VI. SOURCE BASED QUESTIONS

Read the given passage and answer the following questions.

Mountains are elevated landforms rising steeply above their surroundings, distinct from hills and plateaus. Their elevation is measured from sea level to the peak. They occur in ranges, systems or chains and are classified into four types: young fold, old fold, block and volcanic mountains. Diverse vegetation like alpine plants and coniferous forests, along with animals such as yaks, snow leopards

and ibex thrive here. Life is challenging due to cold climates and rough terrain, but people adapt through terrace farming, sloping-roof houses and tourism.

1. Why do people in mountain regions practise terrace farming instead of conventional farming on steep slopes?
   (a) Look attractive ☐ (b) Soil management ☐
   (c) Growing crops ☐ (d) Avoid houses ☐
2. If tourism increases rapidly in mountain areas, what challenge might local communities face?
   (a) More snowfall ☐ (b) Resource pressure ☐
   (c) Easier transport ☐ (d) Festivals disappear ☐
3. Which feature best explains why mountains are different from plateaus?
   (a) Wide tops ☐ (b) Steep rise ☐ (c) Always snow ☐ (d) Only Asia ☐
4. How does the cold climate of mountains influence the way houses are built there?
   (a) Warm walls ☐ (b) Underground houses ☐
   (c) Metal sheets ☐ (d) Sloping roofs ☐

VII. MAP SKILL

On the provided blank map of the world, indicate the following locations:

1. Mountains: Himalaya Range, Alps, Andes Range, Rocky Mountains, Mount Kilimanjaro, Black Forest Mountains, Ural Mountains, Appalachian Mountains, Aravalli Hills
2. Plains: Indo-Gangetic Plains, Nile Valley Plains, North American Prairies, Downs Plains, Pampas Plains
3. Plateaus: Deccan Plateau, Tibetan Plateau, Mongolian Plateau, Colorado Plateau, Spanish Plateau

ACTIVITIES & PROJECTS

Landforms and Climate Connection Chart

Prepare a chart showing how landforms influence climate (e.g., mountains cause rainfall, deserts are dry, coastal areas are humid) and how people adapt to these conditions.

THEME–B

Tapestry of the Past

The past is like a beautiful tapestry woven with the threads of time, stories, discoveries, and experiences of people who lived before us. It helps us understand how communities developed, how cultures flourished, and how human ideas and achievements evolved over centuries. The journey into the past allows us to explore the rich heritage of our land, the lives of early people, and the remarkable contributions that shaped our society. By studying ancient remains, writings, traditions, and other clues, we discover the connections between the past and the present. This exploration helps us appreciate the diverse history and the fascinating beginnings of India's civilization.

4 Timeline and Sources of History

Let's Learn About

- How do we know about earlier times?
- What are the materials of history?
- How is time counted in history?
- The start of human history?

Let's Gear Up

One afternoon, Vanya and her friend Kabir went to a museum in their town. As they moved through the halls, they saw old coins, stone writings, paintings and tools used by people many years ago. Kabir asked, "Why are these things kept here?"

The guide said, "These are sources of history. Coins tell us about rulers and trade, writings show rules and events, paintings show culture and tools tell us how people lived. Historians carefully study these things. They help us learn about the political, social, religious and cultural life of the past. Knowing history shows how yesterday shaped today and tomorrow.

HOW DO WE LEARN ABOUT THE PAST?

Who are the people who study history and help us learn about events that happened long ago? There are many people who explore history.

Some of these include:

- Historians: These are people who study history. They do research, check and understand facts and then tell about past events. They often focus

Ancient History Books

to study a specific topic, time period or place. They share their results with others through articles in newspapers, magazines and books.

An Archaeologist

- Archaeologists: These are experts who study special places and do digging work. They learn about the past by looking at things found in these digs, such as fossils, tools, pots, decorations, beads, little statues, toys, burnt grains, old building remains, houses bricks and bones and teeth of people and animals.
- Epigraphists: These are experts who study old writings. They look at words or marks found on strong materials like stone, metal or clay used in the past.

Ancient Inscription

- Genealogists: These are experts who use old records to study family histories and origins. They draw family trees and try to learn about the social and cultural lives of our ancestors.

A Geologist

- Geologists: These are scientists who study the history of the Earth, its parts, materials and natural changes. They also explore how people have impacted the planet and its resources, along with the creation of land features like rocks, hills, mountains, oceans, rivers, seas and soils around the world.

A Palaeontologist

- Palaeontologists: These experts study the history of life on Earth by examining fossils. Fossils are the preserved remains of plants, animals, fungi, bacteria or other living things that are more than 10,000 years old and are found inside rocks or soil.

An Anthropologist

- Anthropologists: These are experts who study human groups and cultures, from the past and the present. They try to explain and understand the social and cultural features of different time periods.

HOW IS TIME RECORDED IN HISTORY?

If someone asks your birth date, what will you say? For example, if you say 15(day) / 04 (month) / 2015 (year) do you know how days, months, and years are counted and measured?

In history, we also find dates, years, decades, centuries. For example, 273 BC or AD 711. What do BC and AD mean? How are these dates decided?

These dates and years are counted from the estimated birth of Jesus Christ, the founder of Christianity. BC means Before Christ and AD means Anno Domini.

BC (BCE)

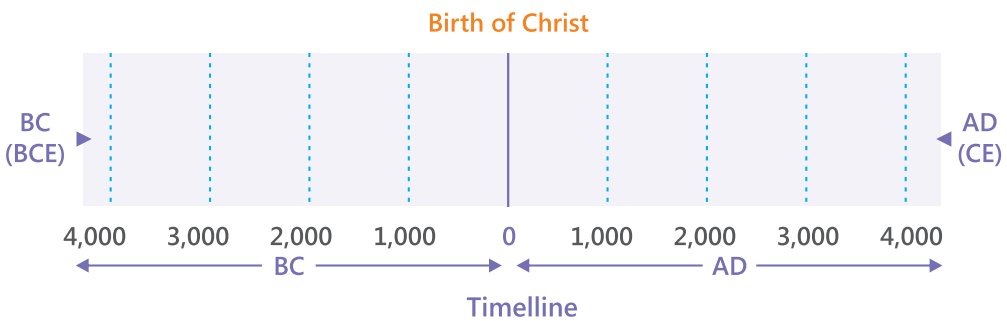
BC means "Before Christ." All the years that happened before Jesus Christ's birth are written as BC. These years are counted backwards in order. For example, 273 BC shows 273 years before Christ's birth. BCE means "Before Common Era." BCE may be used instead of BC, but because the Christian Era is used in many countries today, BC remains widely used in historical records.

Jesus Christ

AD (CE)

AD comes from the Latin words "Anno Domini," which mean "in the year of the Lord" (referring to Jesus Christ).CE is also used in place of AD and means "Common Era."All the years after the birth of Jesus Christ are written as AD. These years are counted forward. For example, the year 2026 can also be written as AD 2026, which means 2026 years after the birth of Jesus Christ.

Today, the most commonly used calendar for counting and recording time is the Gregorian Calendar. However, this calendar does not have a "year zero." The year 1 CE comes immediately after the year 1 BCE.



To find the difference between two dates that are both in BC or both in AD, we subtract the smaller year from the bigger year. For example, the time difference between 2,000 BC and 500 BC is calculated as 2,000 BC – 500 BC = 1,500 years. The same rule is used for dates that are both in AD.

However, to find the time gap between a date in BC and a date in AD, we add the two years and then remove 1 because there is no year zero. For example, to find the difference between 500 BC and AD 1,500, we first add the years: 500 + 1,500 = 2,000 years, then remove 1, giving 2,000 – 1 = 1,999 years in total.

BP

Sometimes BP, meaning "Before Present," is used to show events from the past. For simple study, we take AD/CE 2000 as the current reference year.

In India, these words began being used about 200 years ago because of British rule. Before that,

dates were counted using the Vikram Samvat calendar.

Timeline

A timeline is a method of showing events in time order. It helps us know the order in which events happened and the gaps of time between them. The events on a timeline are placed from the oldest to the newest.

A timeline usually has short details of events to help readers understand the background. It can be made in a straight line, up and down, or side to side and may also use pictures like lines, arrows, signs, or images to make it simple to understand.

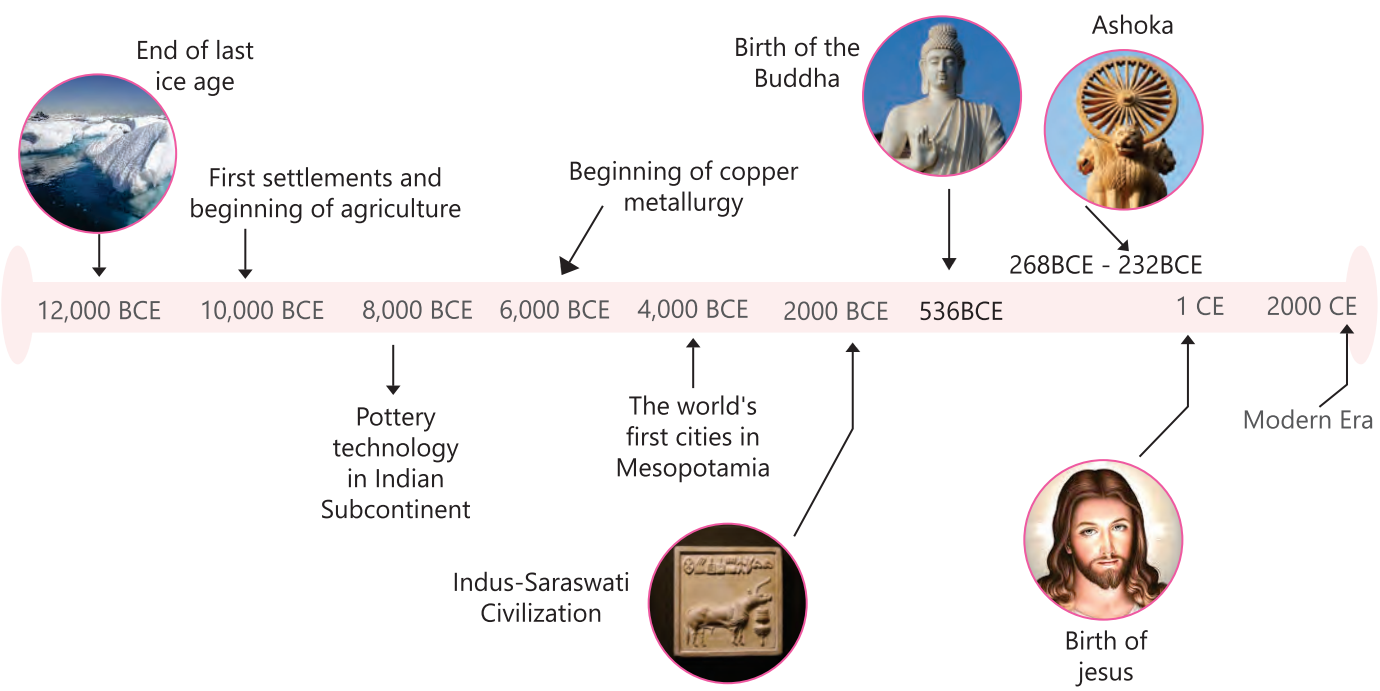
In history, a timeline helps historians and students understand the order of past events, such as the rule of kings and dynasties, the rise and fall of civilizations and empires, important wars, and major discoveries and inventions.

Do you know?

Vikram Samvat is an ancient Hindu calendar system that is still widely used in India and Nepal. It is a lunisolar calendar, which means it follows both the cycles of the moon and the sun. It was introduced in 57 BC by King Vikramaditya of Ujjain after he defeated the Sakas. The year count in the Vikram Samvat calendar is usually 57 years ahead of the Gregorian calendar.

This calendar is based on the moon's motion and has 354 days in a year, divided into 12 months with two phases each. The year starts in the month of Vaishak, which usually corresponds to mid-April and ends in Chaitra, which occurs in mid-March to mdi-April. It is still followed by many communities to schedule festivals, religious ceremonies, agricultural activities and other auspicious occasions. It is the official calendar of Nepal and is used for all governmental and administrative purposes.

Important Terms Related to Time



- **Year:** A period of 365 or 366 days in the Gregorian calendar, divided into 12 months, beginning on January 1 and ending on December 31.
- **Decade:** A period of 10 years. For example, the 1990s include the years 1990–1999, all having the same tens digit.
- **Century:** A period of 100 years, often used to show dates. For example, the 19th century includes the years 1801–1900. We are now in the 21st century, which lasts from 2001 to 2100.
- **Millennium:** A period of 1,000 years, or the end of a 1,000-year period. For example, we are now in the third millennium, which started in 2001 CE and will end in 3000 CE.

In-Text Questions

A. Indicate whether True or False.

1. History is the study of events that happened in the past.
2. An archaeologist maps out family histories and ancestries.
3. Fossils are the preserved remains of plants, animals, fungi and other organisms.
4. Jesus Christ established the religion of Christianity.
5. A timeline does not include pictures or brief descriptions of events.

B. Have a conversation with an older family member, such as your grandfather or grandmother. Inquire about the key events in their life and record the dates when these events happened. Next, create a timeline from the information you collected, incorporating symbols, arrows, brief notes or other visual aids.

WHAT ARE THE SOURCES OF HISTORY?

Clues and evidence used to write history are called sources. Historians use different types of sources to learn about the past. The sources they choose depend on the time period they are studying and the kind of research they are doing.

Sources of history are collected and studied by historians, archaeologists, genealogists, anthropologists, epigraphists, and others, as explained earlier in this chapter. While collecting information about a particular event, place, or person, they work carefully and use as many suitable sources as possible. Sometimes, information from different sources matches, while at other times, the sources may give different information. In such cases, historians must decide which sources are trustworthy and which are not.

Sanchi Stupa, Madhya Pradesh

- **Remains of Buildings or Monuments:** Any structure, building, or place that has historical, archaeological, or artistic importance and is at least 100 years old is called an "Ancient Monument" in India. These remains may be buried, like those in Harappa and

Mohenjo-daro, or may still be standing, like the Red Fort in Delhi or the Taj Mahal in Agra. Monuments include temples, forts, palaces, stupas, monasteries, mausoleums, and similar buildings. They give useful information about the growth of art and architecture, as well as the social and economic life of people from the time when they were built.

Coins of Samdragupta's Reign

- **Coins:** The study of coins is called Numismatics. Coins tell us about rulers, the size of their kingdoms, dates, languages, trade, art, religion, and the literary works of a particular period. For example, the coins of Samudragupta show that he was a talented Veena player.

- **Other Objects:** Archaeologists discover, study, and carefully dig up tools, weapons, pots, utensils, and ornaments buried underground. These objects may be made of stone, bone, baked clay, or metal. They also study the bones

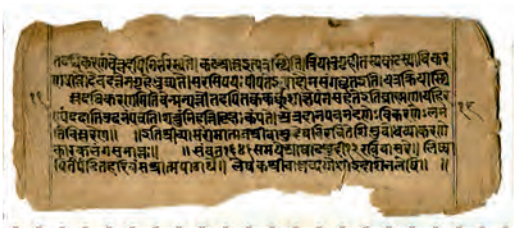
Stone tools

Weapons

Pots

Ornaments

of animals, fish, and birds to understand what early humans ate. Plant remains, such as seeds or pieces of wood, are rarely found because they decay easily and are usually discovered only in burnt or charred form.



A manuscript

- **Manuscripts (Literary Sources):** Books written by hand long ago are called manuscripts (the word comes from the Latin word "manu," meaning hand). People usually wrote manuscripts on two materials: palm leaves and specially prepared birch bark from trees that grow in the Himalayas. These manuscripts contain epics, poems, and plays. They were written in Sanskrit, Prakrit (the language of the common people), and Tamil. Although many manuscripts were damaged or destroyed by insects, some are still kept safe in temples and monasteries. They tell us about the lives of kings, religious beliefs and practices, science, medicine, and other parts of society.

- **Inscriptions:** These are writings or carvings on hard surfaces like stone or metal, but they can also be written on paper or other materials. They usually recorded royal orders, achievements, teachings, and other important information. For example, the inscriptions of Ashoka. Kings often recorded their victories in battles through inscriptions. Some inscriptions also include information about ordinary people. The study of inscriptions is

Ashokan Pillar Inscription in Brahmi Script at Lumbini

called Epigraphy. Decipherment is the process of reading and understanding the script used in inscriptions, which is made up of signs or letters.

Over the past 50 years, scientific research has greatly increased our knowledge and understanding of the past. By using different technologies, researchers have discovered new information that helps us understand history more clearly, correctly, and in greater detail. Scientific studies go beyond traditional ways of studying the past and offer new ideas about the lives of our ancestors and their societies. They have improved our understanding of historical events and human development.

For example, Radiocarbon dating is a scientific method used to find the age of organic materials such as wood, bones, and seeds, up to about 50,000 years old. This method helps us understand the time order of historical events more clearly. Satellite images help archaeologists find and study ancient sites from space. Genetic analysis gives useful information about the movement of people and genetic differences. Historians also use newspapers and historical journals to study events from the past two to three centuries. They also use electronic media, such as the internet and television, to study changes and events from the last few decades.

Analyze Thoughts

Imagine you are an archaeologist assigned to excavate a site. Write a note explaining the methods you would use to discover historical sources. Also, describe the difficulties or obstacles you encountered during your work.

In-Text Questions

1. The Red Fort is located in ..... .
2. The examination of coins is called ..... .
3. Books that were handwritten long ago are referred to as ..... .
4. The study of inscriptions and engravings is called ..... .
5. Satellite images help to locate and observe archaeological sites from ..... .

THE BEGINNINGS OF HUMAN HISTORY

The first modern humans called Homo sapiens appeared on Earth about 300,000 years ago in Africa, beginning human history. Around 60,000 to 70,000 years ago, Homo sapiens started moving from Africa and reached many places like Asia, Europe and the Americas. This slow movement led to humans living across the world and created many different cultures and civilizations through their unique ways of life too.

Early man was a hunter-gatherer

Early humans were people who hunted animals and

gathered fruits, nuts and roots from plants for food. They followed a nomadic way of life, moving often to find food, shelter and other useful things. They usually lived in groups to care for and help each other. Their homes included natural places such as caves and rock shelters or small huts built using materials found in forests. They wore animal skins to keep themselves safe from extreme cold weather.

Discovery and use of Fire

Early humans were the first people to create tools using bone, wood and stone. Some common tools were hand axes, arrowheads, blades, knives, needles and spears, which helped them hunt animals, cut things and build shelters. The discovery of fire was one of their greatest achievements. Fire helped them cook food, stay safe from wild animals and keep warm. Early humans also shared ideas using signs, sounds and simple forms of language, which do not exist today.

Communication was important for planning hunts together and while moving to new places. With time, early humans also learned to create simple jewellery, like pendants made from animal teeth and beads made from stones or shells. They exchanged these decorations with people from other groups.

Cave painting

Many cave drawings have been discovered around the world, showing the daily life, ideas and traditions of early humans. Most of these drawings and carvings show hunting scenes, animals, and human shapes. It is believed that early humans also had ideas about nature and the afterlife.

The First Crops

Millions of years ago, there was a time when the Earth's temperature was very low and much of its surface was covered with thick ice layers and glaciers. This period is called the Ice Age. During this time, large areas of North America, Europe and Asia were covered by ice, and huge amounts of water were stored within it. Humans and animals survived these difficult conditions by creating new tools, shelters and clothes. Some animals moved to warmer places in search of food. The last Ice Age, called the Pleistocene Ice Age, continued for more than 100,000 years and finished about 12,000 years ago.

After this time, the Earth's climate became warmer. As the temperature increased, ice from glaciers melted and rivers received large amounts of water. Grasslands naturally appeared in many areas and different grain plants, including wheat, barley and rice, grew in various parts of the subcontinent. People saw these changes and started growing crops, becoming farmers.

Wheat and barley were the first grains that people cultivated. Later, they began growing other food crops like rice and lentils, along with cotton, jute and other plants.

They used simple tools like hoes and early ploughs and collected crops using sickles made from flint. Humans changed from being food collectors to food growers, which made their lives better. As they needed to look after their crops, people slowly left their nomadic way of life and started living in one place. They built mud houses with grass-covered roofs and stayed together in small villages. Most villages were built near rivers, which gave rich soil and enough water for farming and everyday needs.

People also started to tame animals like sheep, goats, cattle, pigs, camels, horses and donkeys. This helped solve the food shortage problem of early humans. Dogs protected people from harmful wild animals. Animals such as cows, goats and sheep gave fresh milk, while goats and sheep also provided meat. In this way, the animals that people kept and cared for became a "store" of food, and humans no longer needed to take dangerous hunting trips to search for food.

Domesticated animals also helped early humans with farming work. Bullocks, donkeys, horses and camels were used for ploughing fields and moving goods. These animals also gave manure, which helped make the soil richer and fertile.

Domestication of animals

Animals also helped meet the need for clothing. They provided wool and hides, which people used to make clothes. The animals also reproduced naturally, increasing their numbers. In this way, domestication made human life much easier and safer compared with the life of early hunter-gatherers.

The settling of people in groups resulted in the formation of the first communities. As mentioned earlier, these communities were built near rivers such as the Indus, Nile and Euphrates. With time, people made permanent houses, created new farming tools, started saving extra food and made crafts to fulfil other needs. They worked together in growing crops, keeping animals and protecting each other. The lands, forests, grasslands and water sources were seen as the shared wealth of the community and were used by all members. Rich and poor people lived together peacefully and worked for the benefit of everyone.

This period also saw the beginning of organized social systems. Some men were accepted as leaders by the community because of their natural qualities like courage, knowledge and leadership abilities. These leaders were called "chieftains." They could be older, experienced men or young, brave fighters. They made decisions for the community, solved problems and managed the sharing of food and resources. They also protected people from wild animals and fights with other communities. Elderly women were respected because of their wisdom and experience of life.

With the growth of population, the small villages or hamlets slowly became larger in size. To meet

their needs, people developed ways of communication and started trading with one another. They exchanged items like food, tools, and raw materials, while also sharing ideas and building cultural traditions.

They developed new methods for making better tools, pottery, ornaments, and clay products. This period also marked the first use of metals by humans. Copper was the first metal used for making tools and jewellery around 8,000 BCE, while iron was found around 3,000 BCE. The use of iron brought great changes in farming, battles, and building work, because iron tools and weapons were stronger and lasted longer.

Do you know?

1. **What is domestication?**
   It is the process in which humans cultivate crops and rear animals.
2. **Why do the plants and animals that are nurtured and cared for by humans usually differ from wild plants?**
   This is because humans choose only those plants and animals that are resistant to disease. They select plants that produce large grains and have strong stems capable of supporting the weight of mature seeds. Seeds from the chosen plants are saved and replanted to ensure that the next generation of plants maintains the same quality. Animals that are calm and manageable are chosen for domestication. The first plants to be domesticated were wheat and barley, while the first animals domesticated were sheep and goats.

All these changes and improvements in the life of early humans resulted in the emergence of more advanced societies and civilizations.

In-Text Questions

State whether True or False.

1. Early humans survived as hunter-gatherers.
2. Early humans crafted their own tools.
3. People did not establish settlements near river valleys.
4. Resources were controlled by only a small number of people.
5. Copper was the first metal used by humans.

Go Further

Which type of habitation is known as a village?

The main characteristic of a village is that the majority of its inhabitants are involved in producing food.

IMPORTANT TERMS

- **Genealogist:** Traces family history and records
- **Geologist:** Studies Earth's structure and history
- **Epigraphist:** Analyzes ancient inscriptions or writings
- **Auspicious:** Sign of good fortune
- **Timeline:** Chronological sequence of events
- **Numismatist:** A person who studies coins and currency
- **Inscription:** Text engraved on a surface

- **Historian:** Studies and records past events
- **Archaeologist:** Excavates and studies ancient sites
- **Palaeontologist:** Examines fossils to understand life
- **Anthropologist:** Studies human cultures and societies
- **Era:** Distinct historical time period
- **Hamlet:** A very small rural village or settlement.
- **Source**: Origin of historical information
- **Manuscript:** Handwritten historical document
- **Ice Age:** Period of massive glaciation
- **Domestication:** Taming animals or cultivating plants
- **Fossils :** Preserved remains of organisms

QUICK TAKE

- History is the study of past happenings and human experiences over time.
- It explores politics, society, economy, faith, science, culture, ideas and inventions of civilizations.
- AD comes from Latin "Anno Domini," meaning "year of our Lord," counting years forward.
- BC means "Before Christ." Years before Jesus' birth are labelled BC, counting backward.
- A timeline shows events arranged in the order they happened.
- Studying coins and currency from the past is called Numismatics.
- In India, any building, site or structure older than 100 years is an Ancient Monument.
- Sources are hints, records and objects that tell us about history.
- Handwritten old books or records are called manuscripts.
- Modern humans first appeared in Africa around 300,000 years ago.
- New science methods like carbon dating, satellites and DNA help uncover history.
- Writings carved on stone, metal or other surfaces are inscriptions.
- Early humans survived as hunters gatherers.
- The Ice Age was when Earth was very cold and large areas were frozen.
- Wheat and barley were the first plants humans farmed.
- The last Ice Age started 100,000 years ago and ended 12,000 years ago.
- Chieftains were leaders admired for bravery, knowledge and guiding others.
- Humans tamed animals like sheep, goats, cows, pigs, camels, horses and donkeys.
- Living together in groups led to early villages and communities.
- Iron came into use around 3,000 BCE.
- Copper was the first metal used for tools and jewellery around 8,000 BCE.

EXERCISES

I. OBJECTIVE TYPE QUESTIONS

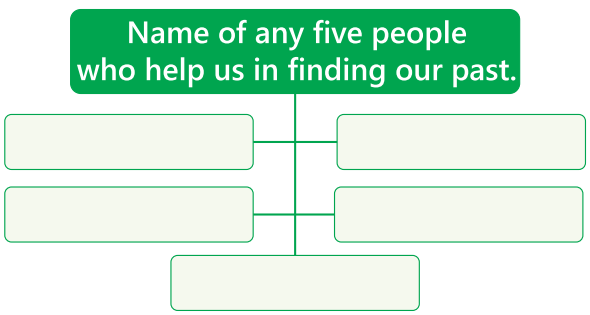
A. Choose the correct answer.

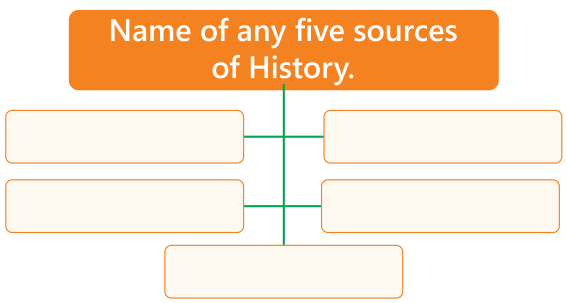
1. Which of these areas are included in the study of history?

(a) Political ☐ (b) Social ☐ (c) Scientific ☐ (d) All of these ☐

2. Which of the following does not explain Early Humans?
   (a) Early humans were hunter-gatherers.
   (b) They lived a nomadic lifestyle, mostly searching for food, shelter and resources.
   (c) They lived in well-developed cities.
   (d) They were the first to create tools from bone, wood and stone.
3. Experts who study inscriptions are known as:
   (a) Geologists ☐ (b) Archaeologists ☐ (c) Epigraphists ☐ (d) Genealogists
4. Manuscripts were written in which of these languages?
   (a) Sanskrit ☐ (b) Prakrit ☐ (c) Tamil ☐ (d) All of these
5. In BC, years are counted:
   (a) Backwards ☐ (b) Forwards
   (c) Both backwards and forwards ☐ (d) None of these

B. Fill in the blanks.





C. Write 'T' for True or 'F' False.

1. Handwritten texts on birch bark are called inscriptions.
2. Hunter-gatherers were people who got food by hunting animals and gathering plants.
3. Copper was the first metal used by early humans.
4. Manuscripts are handwritten records that help us understand our history.
5. Archaeologists are individuals who investigate and dig at sites to learn about our historical heritage.

D. Choose the option that correctly matches items from Column A and B.

Conceptual Learning Problem Solving

Column A	Column B
1. Year	(i) A period of 100 years
2. Decade	(ii) A period of 1,000 years
3. Century	(iii) A period of 365 or 366 days
4. Millennium	(iv) A period of 10 years

(a) 1.-(iii), 2.-(iv), 3.-(i), 4.-(ii)
(b) 1.-(iii), 2.-(ii), 3.-(iv), 4.-(i)
(c) 1.-(iii), 2.-(iv), 3.-(ii), 4.-(i)
(d) 1.-(i), 2.-(ii), 3.-(iii), 4.-(iv)

E. Assertion-Reason.

For questions 1 to 4, two statements are given — one labelled Assertion (A) and the other labelled Reason (R). Choose the correct answer from the codes given below:

1. **Assertion (A)** : Manuscripts are included in written sources of history.
   Reason (R) : Inscriptions are words carved on strong surfaces like stone or metal.
2. **Assertion (A)** : Scientific methods have helped us understand past events and human growth better.
   Reason (R) : Social Science studies do not use scientific methods.
3. **Assertion (A)** : Humans made settlements near river areas.
   Reason (R) : Rivers provided enough water for their everyday requirements.
4. **Assertion (A)** : Wheat and barley were the first crops grown by humans.
   Reason (R) : Early humans also started keeping and using domesticated animals.

(a) Both Assertion (A) and Reason (R) are true and Reason correctly explains the Assertion.
(b) Both Assertion (A) and Reason (R) are true but Reason does not correctly explain the Assertion.
(c) Assertion (A) is correct but Reason (R) is incorrect.
(d) Assertion (A) is incorrect but Reason (R) is correct.

II. Short answer type questions

1. "Animals played an important role in the lives of early humans." Do you agree? Give reasons.
2. Write a short note about the way hunter-gatherers lived.
3. How did humans begin growing crops like wheat and barley?
4. Explain the duties and importance of chieftains in early groups.

III. Long answer type questions

1. Explain how the life of early humans changed after the last Ice Age ended.
2. Describe any three sources that help us learn about the past.
3. Explain how a timeline helps historians and students understand history.
4. Write a note on the work of historians and archaeologists in discovering the past.

Iv. Differentiate between the following.

1. Genealogist and Geologist
2. BC and AD
3. Manuscripts and inscriptions

V. PICTURE STUDY

Study the given pictures showing various sources of history and match them with the correct description below.

(1)

(2)

(3)

(4)

1. They study written records like books and newspapers.
2. They dig old sites and study objects like pottery and bones.
3. They find family histories using old records and documents.
4. They study fossils to learn about ancient plants and animals.

VI. SOURCE BASED QUESTIONS

Read the paragraph and answer the following questions.

People have always been curious about the past, and experts help us discover it. Historians study records, archaeologists dig old sites and examine tools and bones, epigraphists study inscriptions and genealogists follow family histories. Geologists, palaeontologists and anthropologists study the Earth, fossils and human cultures. Time is shown using BC/BCE and AD/CE, and timelines arrange events in order. Experts use monuments, coins, inscriptions and daily objects, while modern methods like radiocarbon dating and satellite images show how people lived, worked and thought.

1. If an archaeologist finds burnt grains at an old site, what could this discovery mean?
   (a) Only meat ☐ (b) Farming existed ☐ (c) Coins used ☐ (d) Writing site ☐
2. Why do historians use timelines while studying history?
   (a) Random order ☐ (b) Compare fossils ☐
   (c) Sequence events ☐ (d) Replace records ☐
3. If you want to know how ancient rulers shared their victories, which source would be most helpful?
   (a) Fossils ☐ (b) Inscriptions ☐ (c) Coins ☐ (d) Family trees ☐
4. How do modern scientific methods like radiocarbon dating improve our knowledge of history?
   (a) Identify rulers ☐ (b) Accurate ages ☐
   (c) Explain inscriptions ☐ (d) Replace monuments ☐

Students create a diary as if they were travelling through different historical periods, recording events in chronological order.

5 India, That Is Bharat

Let's Learn About

- Names Given to India by Its People
- Historical Sources That Mention These Names
- Names Used for India by Outsiders

Let's Gear Up

Rohan chose to explore the heritage places that make our country special. His trip started at the Taj Mahal, where he learned that love was the reason for its construction. Then, he visited the Qutub Minar in Delhi, and was amazed by its tall structure and designs. At the Ajanta and Ellora caves, he saw old paintings that shared stories from many years ago. Later, in Odisha, the Konark Sun Temple amazed him with its huge stone chariot wheels. Finally, he stood near the Red Fort, remembering heroes.

Taj Mahal

Rohan understood that these monuments are not only old buildings; they are valuable lessons about history, culture and art. He wrote in his project, "Heritage places link us with our past and remind us of India's power and creative ideas too."

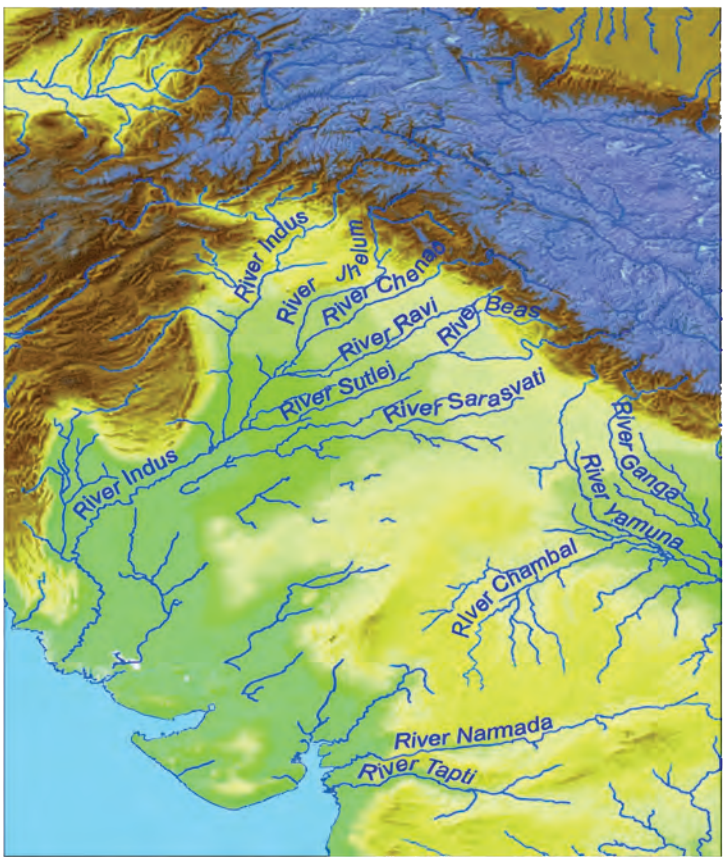
Qutub Minar

Ajanta and Ellora caves

HOW INDIANS NAMED INDIA

The Indians called their land by many different names at different times.

- **Sapta Sindhava:** The earliest mention of this name is found in the Rigveda, the oldest Vedic book. In Sanskrit, Sapta Sindhava means "the land of seven rivers." It referred to the northwestern part of the Indian subcontinent. The word Sindhava comes from Sindhu, which means the Indus River. The Rigveda says that the Sapta Sindhava region was fertile and prosperous, supported by the Indus River, its five main tributaries, and the Saraswati River.
- **Bharata:** The name Bharata is also mentioned in the Rigveda. It referred to an old tribe or group of people who lived in the northwestern parts of the subcontinent.
- **Bharatavarsha:** The name Bharatavarsha is first mentioned in the Mahabharata, one of the greatest ancient Indian epics, traditionally written by Veda Vyasa and developed over many centuries before the Common Era. According to this epic, the name Bharata comes from the famous King Bharata, son of King Dushyanta and Shakuntala, while varsha means a region or part of the Earth. Hence, Bharatavarsha means the land of Bharata, which refers to India. In the northern parts of India, the country is usually called Bharat, while in southern India it is known as Bharatam.



The northwest region

Go Further

There are 18 Puranas that are believed to have been composed by Veda Vyasa. The term 'Purana' signifies ancient. They were initially orally recited and afterwards recorded. They include tales about Gods and Goddesses such as Shiva, Vishnu, Durga and Parvati and how they must be adored. They also explain the origin of the universe, the planetary system, the globe, the lineage of Gods and Rishis and the dynasties. The Puranas were composed in easy Sanskrit poetry and were intended to instruct the ordinary people. They were chanted by priests in shrines.

The Vishnu Purana also explains Bharatavarsha as the land located north of the sea and south of the Himalayan mountains.

Additionally, the Mahabharata mentions the names of many regions of ancient India, such as Indraprastha (modern Delhi), Panchala (parts of present-day Uttar Pradesh), Matsya (modern Rajasthan), Videha (modern Bihar and parts of Nepal), Kerala (present-day Kerala), Kashmira (modern Kashmir), Pragjyotisha (present-day Assam area), Avanti (regions near modern Madhya Pradesh), Dakshinapatha (areas including modern Maharashtra, Karnataka, Andhra Pradesh, and Tamil Nadu), and many others.

- **Jambudvipa:** The term Jambudvipa is mentioned in the Mahabharata and is also found in many Buddhist and Jain texts. In Sanskrit, Jambu means the Jamun (Indian blackberry) tree, which grows widely in the region, while dvipa means an island or continent. Therefore, Jambudvipa means the land or continent connected with the Jamun tree, referring to the Indian subcontinent.

Map of a few regions listed in the Mahabharata.

This name is also mentioned in an inscription of the Mauryan ruler Ashoka, which describes the whole Indian region, including present-day India, Bangladesh, Pakistan, and parts of Afghanistan.

- **Aryavarta:** Many early Indian texts, including the Vedas and the Manusmriti, mention the term Aryavarta. It comes from the Sanskrit words Arya, meaning noble, and varta, meaning land or region. Therefore, Aryavarta means "the land of noble people."This name was used mainly for the northern and central parts of India, where the Aryans built their settlements during the Vedic period.

In-Text Questions

1. The earliest among the Vedas is the .....
2. The name "Sindhu" is used for the river ..... .
3. The word Bharata appears for the first time in the ..... .
4. The child born to King Dushyant and Shakuntala was .....
5. Matsya is identified with the modern region of ..... .

Go Further

The earliest inscriptional proof of the usage of Bharatavarsha is discovered in the Hathigumpha record of ruler Kharavela of Kalinga (1st cent. BC) where it refers to the area of the Ganga, west of Magadha.

HOW FOREIGNERS NAMED INDIA

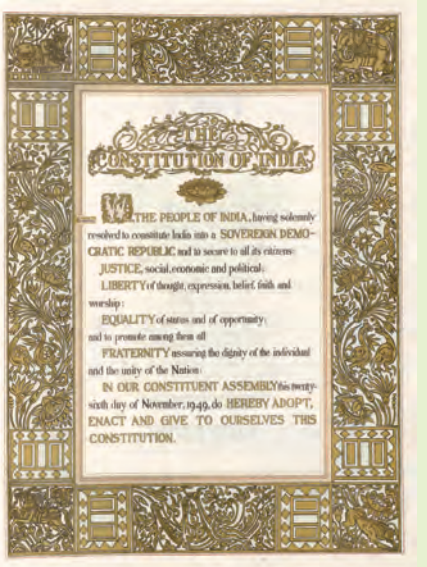
The different names used by foreigners for India are as follows:

- **Hidu or Hindu or Hindustan:** The Persians were the first foreigners to give India a name. Around 516 BC, the Persian King Darius I took control of the Indus Valley. As you have learned, the Indus River was known as Sindhu. The Persians accepted this name and called the lower Indus region Hindu, their version of Sindhu. This name spread up to Egypt. From the 1st century BC, the ending suffix-stan was added to Hindu, creating the name Hindustan.

  An inscription by Emperor Shapur I mentions Sindh as Hindustan. Later, the British also used the name Hindustan along with India.

Do you know?

Article 1 in the Constitution declares, 'India, also referred to as Bharat, shall be a federation of States.' Therefore, both 'India' and 'Bharat' are acknowledged as the official designations of our country.



THE CONSTITUTION OF INDIA

WE, THE PEOPLE OF INDIA, having solemnly resolved to constitute India into a SOVEREIGN DEMOCRATIC REPUBLIC and to secure to all its citizens:
JUSTICE, social, economic and political;
LIBERTY of thought, expression, belief, faith and worship;
EQUALITY of status and of opportunity;
and to promote among them all
FRATERNITY assuring the dignity of the individual and the unity of the Nation;
IN OUR CONSTITUENT ASSEMBLY this twenty-sixth day of November, 1949, do HEREBY ADOPT, ENACT AND GIVE TO OURSELVES THIS CONSTITUTION.

First page of Indian Constitution that states India, that is Bharat

- **Indoi or Indike:** The Greeks came across the Indus region during Alexander the Great's invasion in the 4th century BC. They borrowed the name Hindu from the Persians but removed the first letter because it was not used in Greek. Thus, Hindu became Indoi or Indike.

  This name Indoi later influenced the Latin term India.

- **Tianzhu or Yindu or Shendu:** The Chinese also had links with India and gave it different names. One common name was Tianzhu, found in Chinese history books, Buddhist writings and stories of Chinese pilgrims who went to India.

  The term Tianzhu was derived from Sindhu and was used to describe India as a "holy land," because it was where Buddha was born too.

  The Chinese also named India Yindu, from the old word Hind, commonly used during the Tang period.

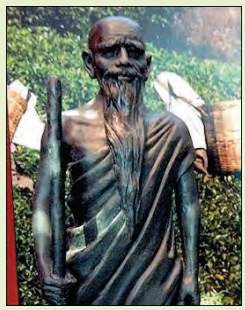
  Old Chinese writings from the Han dynasty called India Shendu, which was believed to come from the word Sindhu.

  Some writings also mention Jambudvipa, meaning the land where Buddhism grew and

spread widely.

Do you know?

In ancient periods, Chinese travellers journeyed to India to study Buddhism, explore Buddhist philosophy, acquire original manuscripts of Buddhist scriptures, and visit sacred Buddhist sites.



Faxian

Xuanzang

The Chinese traveller Faxian (Fa-Hien) came to India and stayed for several years at renowned Buddhist centres like Lumbini, Kapilavastu, Bodh Gaya, Sarnath and Kushinagar. His travel account titled "A Record of Buddhist Kingdoms" (Fogo Ji) offers valuable information about Buddhism and the culture of India.

Another Chinese traveller Xuanzang (Hsuan-Tsang) studied at Nalanda University under the famous scholar Shilabhadra and visited many significant Buddhist locations. He spent about 17 years in India and returned to China with an extensive collection of Buddhist texts and scriptures. He devoted the rest of his life to translating these texts into Chinese. His travel account, "Great Tang Records on the Western Regions" (Da Tang Xi Yu Ji), provides deep insight into the geography, culture, religion and political state of India during that era.

- **Gyagar and Phagyul:** Tibetans called India Gyagar and Phagyul. Gyagar probably came from the Sanskrit word vihara, which means a Buddhist monastery.

  Phagyul means the "land of the Aryans," and it refers to India.

- **India:** The British named the country India, which came from the Sanskrit word Sindhu, the old name of the Indus River.

  As mentioned, the Greek word Indoi became the base for the present name India.

In-Text Questions

Indicate whether true or false.

1. The Persians were the earliest outsiders to refer to India by name.
2. Alexander was a ruler of Persia.
3. The Indus River was also known as Sindhu.
4. Travellers from China never visited India.
5. They called India Yindu.

IMPORTANT TERMS

- **Pilgrim:** Someone travelling far to sacred places.
- **Inscription:** Writing engraved or carved on a surface.

- **Linguistic:** Related to words, speech or language study.
- **Heritage:** Customs, values and culture of a nation passed down.
- **Puranas:** Ancient Sanskrit texts about Gods and legends.
- **Epic:** A lengthy poem about heroes or history.
- **Tribe:** A group of families sharing traditions.
- **Tributary:** A smaller stream that joins a larger one.
- **Constitution:** A written set of fundamental laws.
- **Monastery:** A place where monks or nuns reside.

QUICK TAKE

- "Sindhava" comes from Sindhu, the old name of the great Indus River that flows through the region.
- Local people often called their land Sapta Sindhava, Bharata, Bharatavarsha, Jambudvipa or Aryavarta.
- The word Bharata is first found in the Rig Veda, one of India's oldest holy books.
- Old writings like the Vedas and Manusmriti called the land Aryavarta, meaning "land of Aryans."
- India has had many names over time, showing its long history and different cultural traditions.
- Jambudvipa appears in the Mahabharata and Buddhist and Jain writings as a name for India.
- Bharatavarsha is mentioned in the Mahabharata, a famous story with history and legends.
- Chinese records, Buddhist writings and travellers called India Tianzhu in old historical texts.
- Foreign people used many names for India: Hindu, Hindustan, Indoi, Indike, Tianzhu, Yindu, Shendu, Gyagar, Phagyul, India.
- Greeks learned about the Indus region when Alexander the Great attacked it in the fourth century BCE.
- Persians were some of the first foreigners to write about India and its growing civilizations.
- The British later named it India, taken from Sindhu, the Sanskrit name for the Indus River.

EXERCISES

I. OBJECTIVE TYPE QUESTIONS

A. Choose the correct answer.

1. The word Bharata is first mentioned in_____.
   (a) Upanishada ☐ (b) Puranas ☐
   (c) Rigveda ☐ (d) Descriptions by Greek travellers ☐
2. Literary sources include_____.
   (a) Old scriptures ☐ (b) Writings of foreign visitors ☐
   (c) Narratives of pilgrims ☐ (d) All of these ☐
3. The name for India commonly found in Chinese history books, Buddhist writings, and records of Chinese travellers are_____.
   (a) Tianzhu ☐ (b) Yindu ☐ (c) Shendu ☐ (d) Jambudvipa ☐
4. Sapta Sindhava refers to the region located in which part of the Indian subcontinent?
   (a) Northeast ☐ (b) Northwest ☐ (c) Southeast ☐ (d) Southwest ☐

B. Write 'T' for True or 'F' False.

1. Throughout ancient times, many groups of people moved and settled in India. ☐
2. The Sapta Sindhava region was watered by the river Ganga and its smaller rivers. ☐
3. Videha corresponds to present day Kerala. ☐
4. "Dvipa" means an island or continent in Sanskrit. ☐
5. The name "Indoi" became the basis for the latter Latin name "India". ☐

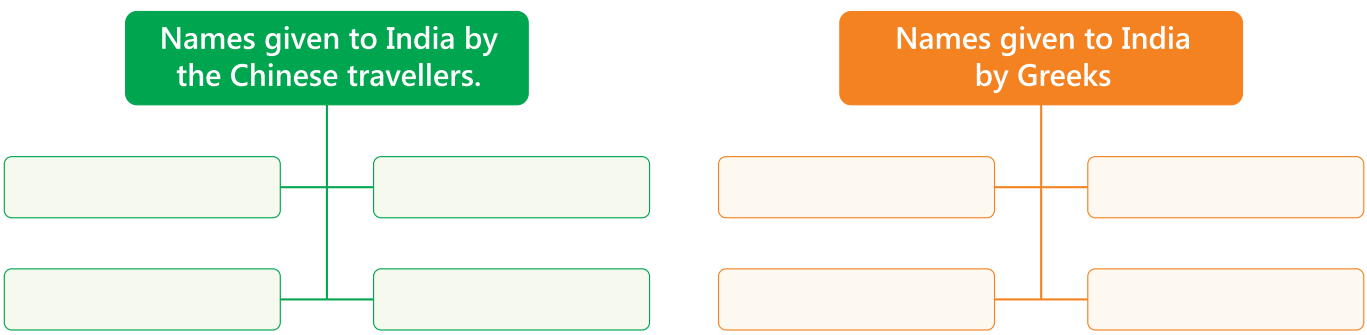
C. Choose the option that correctly matches items from Column A and B.

Conceptual Learning Problem Solving

Column A	Column B
1. Bharatavarsha	(i) Manusmriti
2. Aryavarta	(ii) Tibetans
3. Indoi	(iii) Mahabharata
4. Gyagar	(iv) Greek

(a) 1.-(ii), 2.-(i), 3.-(iii), 4.-(iv)
(b) 1.-(i), 2.-(iii), 3.-(iv), 4.-(ii)
(c) 1.-(i), 2.-(ii), 3.-(iii), 4.-(iv)
(d) 1.-(iii), 2.-(i), 3.-(iv), 4.-(ii)

D. Fill in the blanks.



E. Statement-Explanation

For question numbers 1 to 4, two statements are given—one labelled Assertion (A) and the other labelled Reason (R). Select the correct answer from the codes:

1. **Assertion (A):** Heritage sites help us learn about India's history and culture.
   Reason (R): They protect the art, buildings and traditions of the past
2. **Assertion (A):** The name Sapta Sindhava means "the land of seven rivers."
   Reason (R): It was named after the Indus River, its five main tributaries and the Saraswati River.
3. **Assertion (A):** The name Bharatavarsha is linked with the famous King Bharata.
   Reason (R): The word varsha means a region or land.
4. **Assertion (A):** The Greeks called India Indoi or Indike.
   Reason (R): They took the Persian name Hindu and changed its sound in the Greek language.

(a) Both Assertion (A) and Reason (R) are true, and Reason explains Assertion correctly.
(b) Both Assertion (A) and Reason (R) are true, but Reason does not explain Assertion.
(c) Assertion (A) is true, but Reason (R) is false.
(d) Assertion (A) is false, but Reason (R) is true.

II. Short answer type questions.

1. What does the Mahabharata tell us about the name "Bharata"?
2. Write a short note on Sapta Sindhava.
3. Name the different foreign groups that came to India.
4. Write briefly about the origin of the name "Jambudvipa"

III. Long answer type questions.

1. Explain what the Mahabharata tells us about ancient India.
2. Describe the different names that Chinese travelers gave to India.

IV. Source based questions.

Read the paragraph and answer the following questions.

India has been known by many names throughout history, showing its rich culture and links with different civilizations. Ancient Indians called their land Sapta Sindhava, Bharata, Bharatavarsha, Jambudvipa and Aryavarta. These names were based on rivers, kings, tribes or respected people. People from other lands gave India names such as Hindu/Hindustan (Persians), Indoi/Indike (Greeks), Tianzhu/Yindu/Shendu (Chinese), Gyagar/Phagyul (Tibetans) and finally India (British). Most of these names came from the word Sindhu or their ideas about the country. These names show how India's identity grew through its own traditions and contacts with other cultures.

1. Why did ancient Indians name their land after rivers like Sapta Sindhava?
   (a) Rivers supported life ☐ (b) Rivers stopped travel ☐
   (c) Rivers culturally unimportant ☐ (d) Rivers helped trade ☐
2. What does the name Bharata tell us about remembering leaders?
   (a) Leaders only mythical ☐ (b) Leaders easily forgotten ☐
   (c) Leaders shape identity ☐ (d) Leaders culturally irrelevant ☐
3. What do foreign names based on Sindhu show about cultural exchange?
   (a) Outsiders shaped understanding ☐ (b) Locals were ignored ☐
   (c) Names randomly chosen ☐ (d) No cultural interaction ☐
4. What lesson do India's many historical names teach us?
   (a) Names never change ☐ (b) Identity changes over time ☐
   (c) Outsiders name lands ☐ (d) Names lack meaning ☐

Taste of India Recipe Journal

Document simple recipes from different states, explaining their cultural significance and ingredients.

6 The Beginnings of Indian Civilisation

Let's Learn About

- What is a Civilisation?
- Spread of the Indus-Saraswati Civilisation
- Sources of Information
- Main Features of the Indus-Saraswati Civilisation
- Extent of the Indus-Saraswati Society
- Major Centres of the Civilisation
- The End or a New beginning

Let's Gear Up

Many thousands of years ago, people found the rich land near the Indus River. The river gave them water for farming, so families began living there instead of moving from place to place. They built strong mud-brick houses, grew crops like rice and barley, and kept animals for food and farming. Slowly, these small villages became busy towns and later turned into well-known cities like Harappa and Mohenjo-Daro. These cities were amazing—they had broad streets, public wells, and smart drainage systems that kept everything clean. Imagine walking through one of these cities: traders selling colourful beads, potters making clay pots, and children happily playing near the river. This busy life marked the beginning of Indian civilisation, a story that changed history forever.

WHAT IS A CIVILISATION ?

"In simple terms, civilisation means an advanced form of human society and life."

It refers to the stage in human development when people started thinking beyond only meeting their basic needs. It is the time when people began thinking not only about food, shelter, and

clothing, but also about improving their lives and achieving more. Civilisation is a continuous process that promotes special skills in every area of life. A civilised society has its own social, political and economic systems. Civilisation keeps growing over time, changing from simple to more complex. Division of labour is an important feature of a civilisation.

Some important characteristics of a civilisation are:

- An organised government that gives leadership, maintains law and order, and takes care of its people.
- A group of cities that act as centres of government, culture, trade, and tradition. These cities are well-planned with good irrigation systems, drainage, roads, and strong protective walls.
- Extra food production using special tools and equipment.
- Clear social classes such as rulers, priests, soldiers, artisans and farmers, mostly based on occupation, wealth or birth.
- Special skills in crafts and jobs, along with proper use of raw materials, making and sharing of finished goods.
- Growth of markets and trade, both within society and with others.
- Development of writing for sharing, keeping records, and passing knowledge to future generations.
- Progress in art, books, science and technology, showing culture, traditions and values.
- An organised religion with broad beliefs, practices and moral values.

In short, a civilisation develops when there is an organised social, political and economic system. Civilisation can be compared to a ladder with steps like the invention of the wheel, beginning of farming, growth of writing, mathematics, astronomy, communication and transport systems, crafts and technology.

Go Further

Why did Civilisations flourish near river valleys ?

A River valley can be termed as the mother of civilisations. All the early civilisations grew up in the river valleys. The main reasons for this were:

- Rivers provided continuous flow of water for agriculture.
- The fertile land near rivers supported settlement.
- Rivers also provided means of transport and communication.
- Rivers flooded every year and thus kept the fertility of soil intact.

The time period of the four main river valley civilisations of the world, which developed around 6,000 years ago, is given below:

TIMELINE

4000-3500 B.C.: The Mesopotamian Civilisation on the banks of the Euphrates and Tigris rivers

3300 B.C.: The Indus Saraswati Civilisation or the Harappan Civilisation along the Indus river in the Indian subcontinent.

3100 B.C.: The Egyptian Civilisation along the Nile river in Africa.

2000 B.C.: The Chinese Civilisation along the Huang Ho river.

Timeline of four great river valley civilisations

In-Text Questions

Indicate whether true or false.

1. Settlements developed near riverbanks.
2. Commerce contributed to the expansion of cities.
3. A civilisation moves in a downward direction.
4. The Egyptian civilisation thrived along the Indus River.
5. The division of labour is a key feature of a civilisation.

THE INDUS-SARASWATI OR SINDHU-SARASWATI CIVILISATION

Discovery

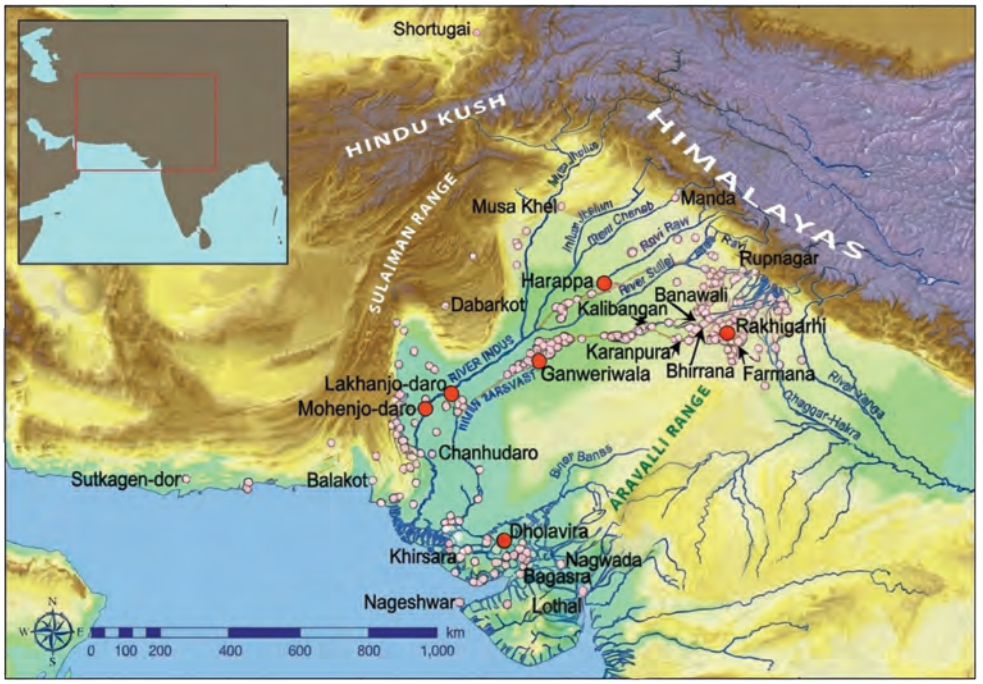
The Indus-Saraswati Civilisation was first discovered during excavations done by Daya Ram Sahni at Harappa and Rakhal Das Banerji at Mohenjo-daro. In 1921, Indian archaeologist Rai Bahadur Daya Ram Sahni first found the remains of the city of Harappa. Later, in 1922, Rakhal Das Banerji, an officer of the Archaeological Survey of India, discovered the ruins of Mohenjo-daro.

Nomenclature of the Civilisation

The Indus-Saraswati Civilisation belonged to the Bronze Age. At first, the remains of this civilisation were found only near the Indus River and its tributaries — the Ravi, Chenab, Beas, Sutlej and Jhelum rivers. Due to this, archaeologists called it the Indus-Saraswati Civilisation.

Do you know?

Harappa is an old city of the Indus-Saraswati Civilisation (around 600–1700 BCE) located in northern Pakistan. The location of its remains was uncovered in 1920.



Map of some of the main settlements of the Indus-Saraswati civilisation. Notice the natural boundaries formed by the Fountain ranges (in brown colour).

Since Harappa was the first city to be discovered and other sites had mostly similar features, this civilisation was called the Harappan civilisation. Some archaeologists also called it the 'Indus-Saraswati' or 'Sindhu-Saraswati' civilisation because many sites were found along the Saraswati River. The people of this civilisation were called Harappans. The excavation of the well-planned cities of Harappa and Mohenjo-daro added nearly 2,000 years to the history of India.

Do you know?

The Saraswati River and Indus-Saraswati Civilisation

The Saraswati River is regarded as a sacred river and is known as the "River of Knowledge" in Hindu mythology. Goddess Saraswati is called the "Goddess of Knowledge," and it is believed that she herself dwelled in this holy river.

The river is first mentioned in the Rigveda, where it is called "Naditrana," meaning the best of rivers. It is identified with the Ghaggar-Hakra channel in the regions of Haryana and Rajasthan. Later Vedic texts state that the river gradually dried up and finally vanished. Since the river no longer flows, some historians consider it legendary.

The river played an important role in the development of the Indus-Saraswati Civilisation. It originated in the Himalayas and flowed through northwestern India, lying between the Indus River in the west and the Ganges in the east. It passed through Punjab, Haryana, western Rajasthan and Gujarat before flowing into the Arabian Sea.

Many sites of the Indus-Saraswati Civilisation, especially those from the mature Harappan phase (around 2600–1900 BCE), such as Kalibangan, Banawali and Rakhigarhi, are located along the banks of the Saraswati River and its tributaries. The river was a blessing for the Harappans as it supplied water

for farming, transport and daily needs. As the river gradually dried up due to climate or geological changes, it caused the decline of many Indus-Saraswati cities because water was no longer available for agriculture or trade. This resulted in large-scale migration of people from the Saraswati valley to the Ganges valley and other areas.

Numerous satellite images have assisted in tracing the path of the Saraswati River, which clearly indicate that this river was not legendary but a vital source of life for the Harappan civilisation.

EXTENT OF THE INDUS-SARASWATI CIVILISATION

The Indus-Saraswati Civilisation began around 3300 BCE and developed greatly between 2600 BCE and 1900 BCE. With the discovery of nearly 1,400 settlements spread across different parts of the Indian subcontinent, it is considered the largest civilisation of the ancient world. It is also called the 'First Urban Development of India.' Out of these 1,400 sites, about 925 are in India and 475 are in Pakistan.

The boundaries of the Indus-Saraswati Civilisation were:

- **West:** Sutkagen Dor in Baluchistan
- **East:** Alamgirpur in Uttar Pradesh
- **North:** Manda in Jammu & Kashmir
- **South:** Diamabad in Maharashtra

The civilisation covered an area of about 1,250,000 square kilometres.

MAJOR CENTRES OF THE CIVILISATION

Apart from Harappa and Mohenjo-daro, where the remains of the Indus-Saraswati Civilisation were first discovered, other important sites include:

- **Kalibangan** in Ganganagar district, Rajasthan
- **Ropar** near the Sutlej River, Punjab
- **Banawali** in Hisar district, Haryana
- **Alamgirpur** in Meerut district, Uttar Pradesh
- **Lothal, Rangpur, Rojdi and Dholavira** in Gujarat
- **Kotdiji, Amri, Chanhu-Daro** in present-day Pakistan
- **Sutkagen Dor** on the eastern coast of South Balochistan, Pakistan

  The two recently discovered sites are Rakhigarhi (Haryana) and Dholavira (in Kutch, Gujarat).

Important sites of the Indus-Saraswati Civilisation

SOURCES OF INFORMATION

Our main sources of knowledge about the Indus-Saraswati Civilisation are the archaeological remains found during excavations at different sites. These remains include seals, seal impressions, statues, jewellery, pottery and structures like the Great Granary at Harappa and the Great Bath at Mohenjo-daro. The Indus script was found, but it has not been understood yet and remains a mystery for historians.

MAIN FEATURES OF THE INDUS-SARASWATI CIVILISATION

The remains of the Indus-Saraswati sites show that it was an advanced and well-organised urban civilisation. Some of its important features are:

- Urban Planning and Structures: The Harappan cities were properly planned. Most of these cities were divided into two parts: the upper town (or citadel) and the lower town.

Go Further

Mohenjo-daro is a historic city of the Indus-Saraswati Civilisation (around 2600–1700 BCE) and is currently an important archaeological site in Pakistan, southwest of Sukkur.

The Citadel

A citadel is a fort built on higher ground in or near a city, where people could take shelter during attacks. Usually, the citadel was built on the western side of the city and covered a smaller area. It was made on a raised platform. High walls made of baked bricks surrounded the citadel to protect it from floods. The bricks were placed in a linked pattern, making the walls strong and long-lasting. Important public buildings, such as the Great Bath of Mohenjo-daro, granaries, assembly halls or town halls, and fire altars were built inside the citadel. It is believed that the rulers lived there.

The Great Bath

It was found at Mohenjo-daro. It looks like a big rectangular pool, similar to a modern swimming pool. Its measurements are 11.88 metres long, 7.01 metres wide and 2.43 metres deep. The tank was covered with bricks and coated with gypsum plaster. It was made waterproof with a layer of natural tar or bitumen. Steps went down from two sides. There were rooms with two openings on all sides, which were possibly used as changing rooms. One opening at the top brought water from a nearby well, while the other opening helped drain the used water. It is believed that the Great Bath was used either as a bathing place for the royal family or as a tank for religious ceremonies and rituals.

The Great Bath

The Granary

Store Houses or the Granaries

Mohenjo-daro, Harappa and Lothal had well-built storage buildings. The biggest structure found at Mohenjo-daro is the Granary, which was 45.71 metres long and 15.23 metres wide. In Harappa, there were six granaries used to store extra grain. Near the granaries, round brick platforms were found, which were probably used for separating grain from the stalks.

Assembly or Town Hall

A massive building measuring 69 metres in length and 24 metres in width with walls approximately 1.5 metres thick, has been discovered in Mohenjo-daro. It was likely used either as an administrative building or as a hall for public meetings.

Fire Altars

Fire altars were found at Kalibangan and Lothal. Their discovery indicates that the Indus-Saraswati people conducted rituals.

The Lower Town

The Lower town was usually located in the eastern part of the city. It was bigger but lower than the citadel. It was the living area of common people. The lower town was also surrounded by high walls of baked bricks to protect it from floods.

A Well in the House

Houses

The houses of common people were usually one or two storeys high. The rooms were built around a central courtyard. The houses were lined along by narrow but straight roads. They were made using similar, good-quality baked bricks. Most houses had separate bathrooms, kitchens and wells. The Harappan civilisation had the oldest toilets with a flushing system in the ancient world.

A large reservoir cut in the rock at Dholavira, measuring 33 metres in length

Wells

The people of the Indus-Saraswati Civilisation dug wells to get underground water. These wells were found both inside houses and within the city walls. Some wells were also used to remove wastewater. The planning of cities like Harappa, Mohenjo-daro, and Dholavira shows that the Harappans gave great importance to managing water. These cities have evidence of big public baths and water storage tanks. You have already learned about the Great Bath at Mohenjo-daro. Excavations show that Dholavira had at least six large water reservoirs, with the biggest one measuring 73 metres in length. These reservoirs were built with stones or cut into rocks. Most of them were connected to underground drains for collecting and storing rainwater. Therefore, the reservoirs helped to manage water shortages.

Drainage system at Lothal (Gujarat)

Drainage System

The Harappan people had an advanced and well-planned drainage system. This shows that they gave great importance to cleanliness and hygiene. The drains inside houses were connected to the main drains on the streets. Smaller drains joined bigger drains. The street drains ran straight along the roads and were mostly covered. Each drain had a gentle slope to help water flow easily. They also had openings at regular

A Street in Mohenjo-daro

distances for cleaning.

Streets

In Mohenjo-daro, the main road was more than 800 metres long and 10 metres wide. The streets crossed each other at right angles. They had rounded corners to help heavy carts turn easily. Houses were built on both sides of the roads. It is believed that houses, drains and streets were planned and constructed together.

Farming

The farmers grew wheat, barley, lentils, peas, rice, sesame, flaxseed, mustard and vegetables. The Harappans were the first people to grow cotton in Asia and Europe. They spun cotton to make clothes.

A new tool, the plough, became very important for the Harappans. It was probably made of wood and was used to prepare the soil for planting seeds. Although wooden ploughs have not been found, small models of ploughs were discovered during excavations. It is believed that farmers may have stored water and provided it to the fields when needed. Lothal was an important centre for rice farming.

The Harappan Plough

Herding

The Harappans kept cattle, sheep, goats and buffaloes.

Although water and grazing land were easily available during dry seasons, the herders moved around looking for grass and water for their animals. The herders also worked as hunters and gatherers. They collected fruits like ber, caught fish from rivers and seas, and hunted wild animals such as antelopes.

Food

The farmers and herders lived in small villages in rural areas. They supplied food to artisans, writers, and rulers living in the cities. The food included grains, milk, meat, fish, eggs, and fruits. Harappan cooking pots with remains of ginger, turmeric, and bananas have been found during excavations.

Terracotta Figurines

Clothing

Cotton was grown at Mehrgarh about 7,000 years ago. At Mohenjo-daro, archaeologists found actual pieces of cloth attached to the lid of a silver vase and some copper objects. They also discovered spindle whorls made of terracotta and faience, which were used for spinning thread. Therefore, archaeologists have enough evidence that cotton was made into cloth in the Harappan civilisation.

Tool-Making and Other Craft

The Harappan people made tools and weapons from copper and bronze. These tools included axes, knives, spears, fishhooks, and other similar items. They also continued making tools from stone. It is likely that a new group of metalworkers had developed. Craftsmen usually made objects from stone, shell, and metals such as copper, bronze, gold, and silver. These items were made under the guidance of specialists, who may have been both men and women.

The Harappan Tools

The Harappan Weapons and Implements

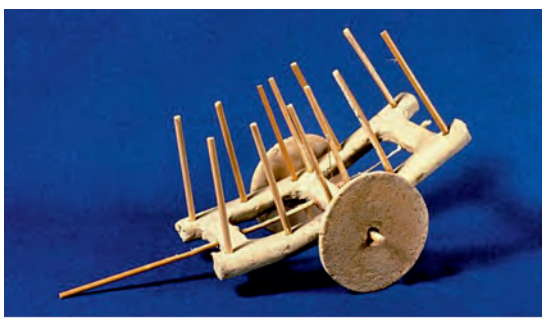
Do you know?

About 4,000 years ago, traders may have used seals to mark their bags or parcels containing goods that were transported from one location to another. A layer of wet clay was placed over the knot after the bag was closed and tied. Then, a seal was pressed onto the wet clay. The impression made by the seal is called a sealing. When the goods reached their destination with the sealing intact, it was taken as proof that the items had arrived safely.

TIMELINE

c. 2600-1900 BCE
Period of the Indus-Saraswati Civilisation.

CE 1920-21
Excavations conducted at Harappa and Mohenjo-daro.



The Harappan Toy Carts

A Brisk Trade

Go Further

The **alloy bronze** is produced by combining copper with tin.

Trade in the Indus-Saraswati civilisation happened through both land and sea routes. Both foreign and local trade developed during this period. Foreign trade was done using ships, while local trade was carried by bullock carts. Lothal was an important centre for trade with Mesopotamia, Persia, Oman and Afghanistan. The small seals found in the Indus-Saraswati region were probably used for trade purposes. The Harappans mostly used local raw materials but also collected some materials from faraway places. They brought different materials from the following regions:

Raw Materials	The Places from where they brought
Copper	Present-day Rajasthan, Oman in West Asia
Tin	Afghanistan and Iran
Gold	Present-day Karnataka
Precious Stones	Present-day Gujarat, Iran and Afghanistan

The exported items included ivory, pearls, gold, jewellery, some food items, timber, decorated pottery and cotton cloth. Necklaces made of engraved carnelian beads were very popular. The carnelian beads were drilled and decorated by Harappan craftsmen using special methods. Many of these beads have been found in the Indus-Saraswati region, Mesopotamia and Ancient Egypt, showing active trade between these areas.

Necklace

The Harappan Pottery

The Harappan Jewellery

Go Further

The Indus-Saraswati seals and beads have been discovered in Mesopotamia. The Mesopotamian records refer to trade with a region called "Meluhha," which is thought to represent the Indus-Saraswati civilisation.

Harappan carnelian beads excavated at Susa (present-day Iran)

A dockyard made of bricks has been found at Lothal. It is 217 metres long and 36 metres wide. It was probably used for keeping ships. This discovery shows that the Harappans knew about ships and carried out successful overseas trade. The Harappans also developed the earliest standard system of weights and measures in Indian history. It is believed that they built trading centres and settlements in other regions to increase trade. Evidence of northern Indus-Saraswati settlements has been found in Oman and other parts of the Persian Gulf.

Harappan ivory comb (about 7 cm long) found on the coast of Oman

A seal depicting a Rhino

A Unicorn Seal

Seals

A large number of seals have been found in Harappan cities. The Harappans usually made seals from stone, terracotta, copper, and steatite. The seals were mostly rectangular and had an animal carved on them. It is believed that seals were used to mark bags and parcels carrying goods from one place to another. After tying the bag, a layer of clay was placed over the knot and the seal was pressed onto it. An intact sealing showed that the goods had arrived safely.

Go Further

In the Sindhi language, "Mohenjo-Daro" means the "Mound of the Dead." The name comes from the discovery of a large number of skeletons of men, women, and children in the uppermost layers of the city. The bodies showed cuts and wounds all over, likely caused by a sword or an axe. This indicates that they all suffered a violent death, which contributed to the decline of the city.

Skeletons found at Mohenjo-Daro

THE END OR A NEW BEGINNING

The Harappan or Indus-Saraswati Civilisation started declining around 1900 BC and disappeared by 1400 BC. Cities in Sindh and Western Punjab were abandoned. Many people moved to newer and smaller settlements in the east and south.

The reasons for this migration were:

1. Some experts believe that climate change caused rivers to slowly dry up because of less rainfall. Less rain reduced crop production and the food supply for the cities.
2. Some areas may have been affected by floods.
3. Large-scale deforestation may have happened because wood was needed to bake bricks and melt copper ore.
4. It is also possible that grazing by large herds of cattle, sheep, and goats damaged the vegetation cover.

Although the cities disappeared, much of the Harappan culture and technology survived and was passed on to the next stage of Indian civilisation, which you will study later.

In-Text Questions

Give a one-word answer for the following.

1. Northern limit of the Indus-Saraswati civilisation.
2. Another name for the citadel.
3. Location where cotton was grown around 7,000 years ago.
4. Place from which gold was traded.
5. Site where the Great Bath was discovered.

Do you know?

Lower Town

Lothal

Beside a tributary of the Sabarmati in Gujarat, there was the city of Lothal, located near the Gulf of Khambhat. Raw materials, such as semi-precious stones, were readily available in the surrounding areas. The city became an important centre of production where objects were crafted from stone, shell and metal. Numerous seals and sealings (impressions of seals on clay) were discovered in this workshop.

A building at Lothal was likely a bead-making workshop. Fragments of stone, bead-making tools, semi-finished and finished beads have been found at the site.

The **dockyard** at Lothal was a large **water tank** where boats and ships entered from the sea via the river channel. Goods were probably **loaded and unloaded** at this dockyard.

A Dockyard at Lothal

NEW TERMS

- **Plough:** Tool for preparing soil
- **Civilisation:** Advanced stage of society
- **Seal:** Mark used for identification
- **Deforestation:** Large-scale removal of forests
- **Granary:** Building for storing grain
- **Citadel:** Fortified center of a city
- **Bitumen:** Sticky black waterproof substance
- **Spindle:** Tool for spinning thread
- **Specialist:** Expert in one field
- **Sealing:** Impression made by a seal
- **Chalcolithic Age:** Period using stone and metal
- **Nomenclature:** System of naming things

IMPORTANT TAKE

- The Indus–Saraswati Civilisation began around 3300 BC and reached its peak between 2600 BC and 1900 BC.
- Archaeological remains found at many sites give us most of the information about the Indus–Saraswati Civilisation.
- A civilisation is a highly developed and well-organised human society.
- Harappa, Mohenjo-daro, Kalibangan, Ropar, Rakhigarhi Banawali, Lothal, Dholavira, and Alamgirpur were important centres.
- The Indus–Saraswati Civilisation belonged to the Copper–Stone Age.
- Harappa was discovered by Daya Ram Sahni in 1921, while Mohenjo-daro was discovered by R.D. Banerji in 1922.
- The cities had a raised western citadel and a lower residential town in the east.
- Houses had proper drainage systems connected to street drains, with roads crossing at right angles.

- Most houses had kitchens, bathrooms, and wells built along narrow, straight lanes.
- The Great Bath, Granary, and Town Hall were important buildings in Mohenjo-daro.
- Farmers grew wheat, barley, pulses, peas, rice, sesame, linseed, and mustard.
- The Harappans kept animals such as cattle, goats, sheep, and buffaloes.
- People wore clothes made from cotton and wool, as shown by the spindles and whorls found.
- Traders and craftsmen brought raw materials to make jewellery, statues, tools, weapons, toys, and utensils.
- Harappan seals were made from stone, terracotta, and copper, and were usually rectangular with animal designs.
- The civilisation started to decline around 1900 BC and disappeared by 1400 BC.
- The name Harappan civilisation comes from Harappa, the first excavated site with similar features.
- It is called the Indus–Saraswati civilisation as many settlements lay near Sarasvati River.

I. OBJECTIVE TYPE QUESTIONS

A. Choose the correct answer.

1. The Harappan city of Dholavira was divided into:
   (a) three parts ☐ (b) two parts ☐ (c) four parts ☐ (d) five parts ☐
2. Harappan seals were usually:
   (a) square in shape ☐ (b) rectangular in shape ☐
   (c) circular in shape ☐ (d) none of these ☐
3. The first cities developed about:
   (a) 2,700 years ago ☐ (b) 4,700 years ago ☐
   (c) 8,000 years ago ☐ (d) 10,000 years ago ☐
4. One of the earliest cities in the Indian subcontinent is:
   (a) Chandigarh ☐ (b) Noida ☐ (c) Harappa ☐ (d) None of these ☐
5. Who looked after the construction of the special structures in the city?
   (a) The farmers ☐ (b) The herders ☐ (c) The rulers ☐ (d) The officials ☐

B. Write 'T' for True or 'F' False.

1. A very important water tank, called the 'Great Bath,' was found at Mohenjo-daro during excavations. ☐
2. Fire platforms have been found at Kalibangan and Lothal. ☐
3. A specialist is a person trained to do certain kinds of work. ☐
4. The raw materials, such as copper, tin, gold, silver and semi-precious stones used by the Harappans were available locally. ☐
5. The cities of Dholavira and Lothal help us understand Harappan culture. ☐

C. Choose the option that correctly matches items from **Column A** and **B**.

Column A	Column B
1. Mohenjo-daro	(i) Discovered by Daya Ram Sahni
2. Lothal	(ii) Large letters of Harappan script
3. Dholavira	(iii) Great Bath
4. Harappa	(iv) Greek

(a) 1.-(iv), 2.-(iii), 3.-(ii), 4.-(i)
(b) 1.-(iii), 2.-(ii), 3.-(iv), 4.-(i)
© 1.-(iii), 2.-(iv), 3.-(ii), 4.-(i)
(d) 1.-(i), 2.-(ii), 3.-(iii), 4.-(iv)

D. Fill in the blanks.

1. The Egyptian civilisation grew along the ..... river.
2. ..... discovered the remains of Mohenjo-daro in 1922.
3. 'Harappa' means ..... .
4. Banawali is in the state of ..... .
5. The Citadel was built on the ..... side of the city.

E. Assertion-Reason

For question numbers 1 to 4, two statements are provided—one marked as Assertion (A) and the other marked as Reason (R). Choose the correct answer from the codes (a), (b), (c), and (d) as given below:

1. **Assertion (A)** : A granary has been found at Kalibangan.
   Reason (R) : The Great Bath is located at Mohenjo-daro.
2. **Assertion (A)** : Real ploughs have not been found during excavations.
   Reason (R) : They were made of wood and may have decayed over time.
3. **Assertion (A)** : Crops were grown easily in the Indus–Saraswati region.
   Reason (R) : Evidence of fire altars has also been found at many sites.
4. **Assertion (A)** : Ropar is located in Punjab.
   Reason (R) : Lothal is located in Haryana.

(a) Both Assertion (A) and Reason (R) are true and the Reason correctly explains the Assertion.
(b) Both Assertion (A) and Reason (R) are true, but the Reason does not correctly explain the Assertion.
(c) Assertion (A) is correct but Reason (R) is incorrect.
(d) Assertion (A) is incorrect but Reason (R) is correct.

II. SHORT ANSWER TYPE QUESTIONS

1. List the uses of copper and bronze by the people of the Indus–Saraswati Civilisation.
2. Explain the main features of the Great Bath at Mohenjo-daro.
3. When and where was cotton first grown?
4. What proof shows that textiles were used in the Harappan Civilisation?
5. Who was known as an expert in a particular field in Harappan Civilisation?

III. LONG ANSWER TYPE QUESTIONS

1. How were the Harappan cities planned? Describe their layout, divisions, and important structures.
2. Explain the main reasons that caused the decline of the Indus–Saraswati Civilisation.

3 Write a note on the clothes and jewellery of the Indus–Saraswati people.
4. Explain the geographical area covered by the Indus–Saraswati Civilisation.
5. Describe the main features of the religious practices of the Harappan people.

IV. PICTURE STUDY

Look at the image of the Great Bath from Mohenjo-daro below and answer the following questions:

1. What is the name of the old structure shown in the picture?
2. Which civilisation built the Great Bath at Mohenjo-daro?
3. Which material was used to make the tank waterproof?
4. Why do historians think the Great Bath was important for the people of Mohenjo-daro?

V. SOURCE BASED QUESTIONS

Read the given paragraph and answer the following questions.

A civilisation is an advanced stage of human society where people move beyond basic needs and create organised systems of government, trade, religion, and culture. It has features like extra food production, division of work, social groups, and growth in art, science, and technology. The Indus–Saraswati civilisation, which flourished between 2600 BCE and 1900 BCE, was one of the earliest and largest civilisations in the world. It spread across India and Pakistan and had well-planned cities like Harappa and Mohenjo-daro with citadels, granaries, drainage systems, and undeciphered writing. Archaeological remains like seals, pottery, and buildings show that it was an organised and developed society.

1. Why is extra food production considered an important feature of a civilisation?
   (a) More hunting time ☐ (b) Trade and labour ☐
   (c) Less organisation ☐ (d) No cities ☐
2. The Indus–Saraswati cities had advanced drainage systems. What does this show about their society?
   (a) Cleanliness valued ☐ (b) Focus on temples ☐
   (c) Water avoidance ☐ (d) No community ☐
3. The Indus script has not been understood yet. How does this affect our knowledge of the civilisation?
   (a) Limited knowledge ☐ (b) No communication ☐
   (c) Copied writing ☐ (d) Only oral records ☐
4. Why are seals and pottery found at Harappa and Mohenjo-daro important?
   (a) Poor are isolated ☐ (b) Art and trade ☐
   (c) Farming only ☐ (d) Decoration only ☐

ACTIVITIES & PROJECTS

Food and Farming in Ancient India

(i) Study the crops grown in early civilisations (wheat, barley, rice).

(ii) Prepare a PowerPoint presentation comparing old farming methods with modern farming methods.

(iii) **Focus:** Agriculture and its role in settlement.

MAP SKILL

1. Indicate the Indus River and its tributaries on an outlined map of India.
2. Show the following key locations of the Indus-Saraswati civilisation on a blank map of India:
   (a) Harappa
   (b) Mohenjo-Daro
   (c) Lothal
   (d) Kalibangan
   (e) Dholavira
   (f) Banawali

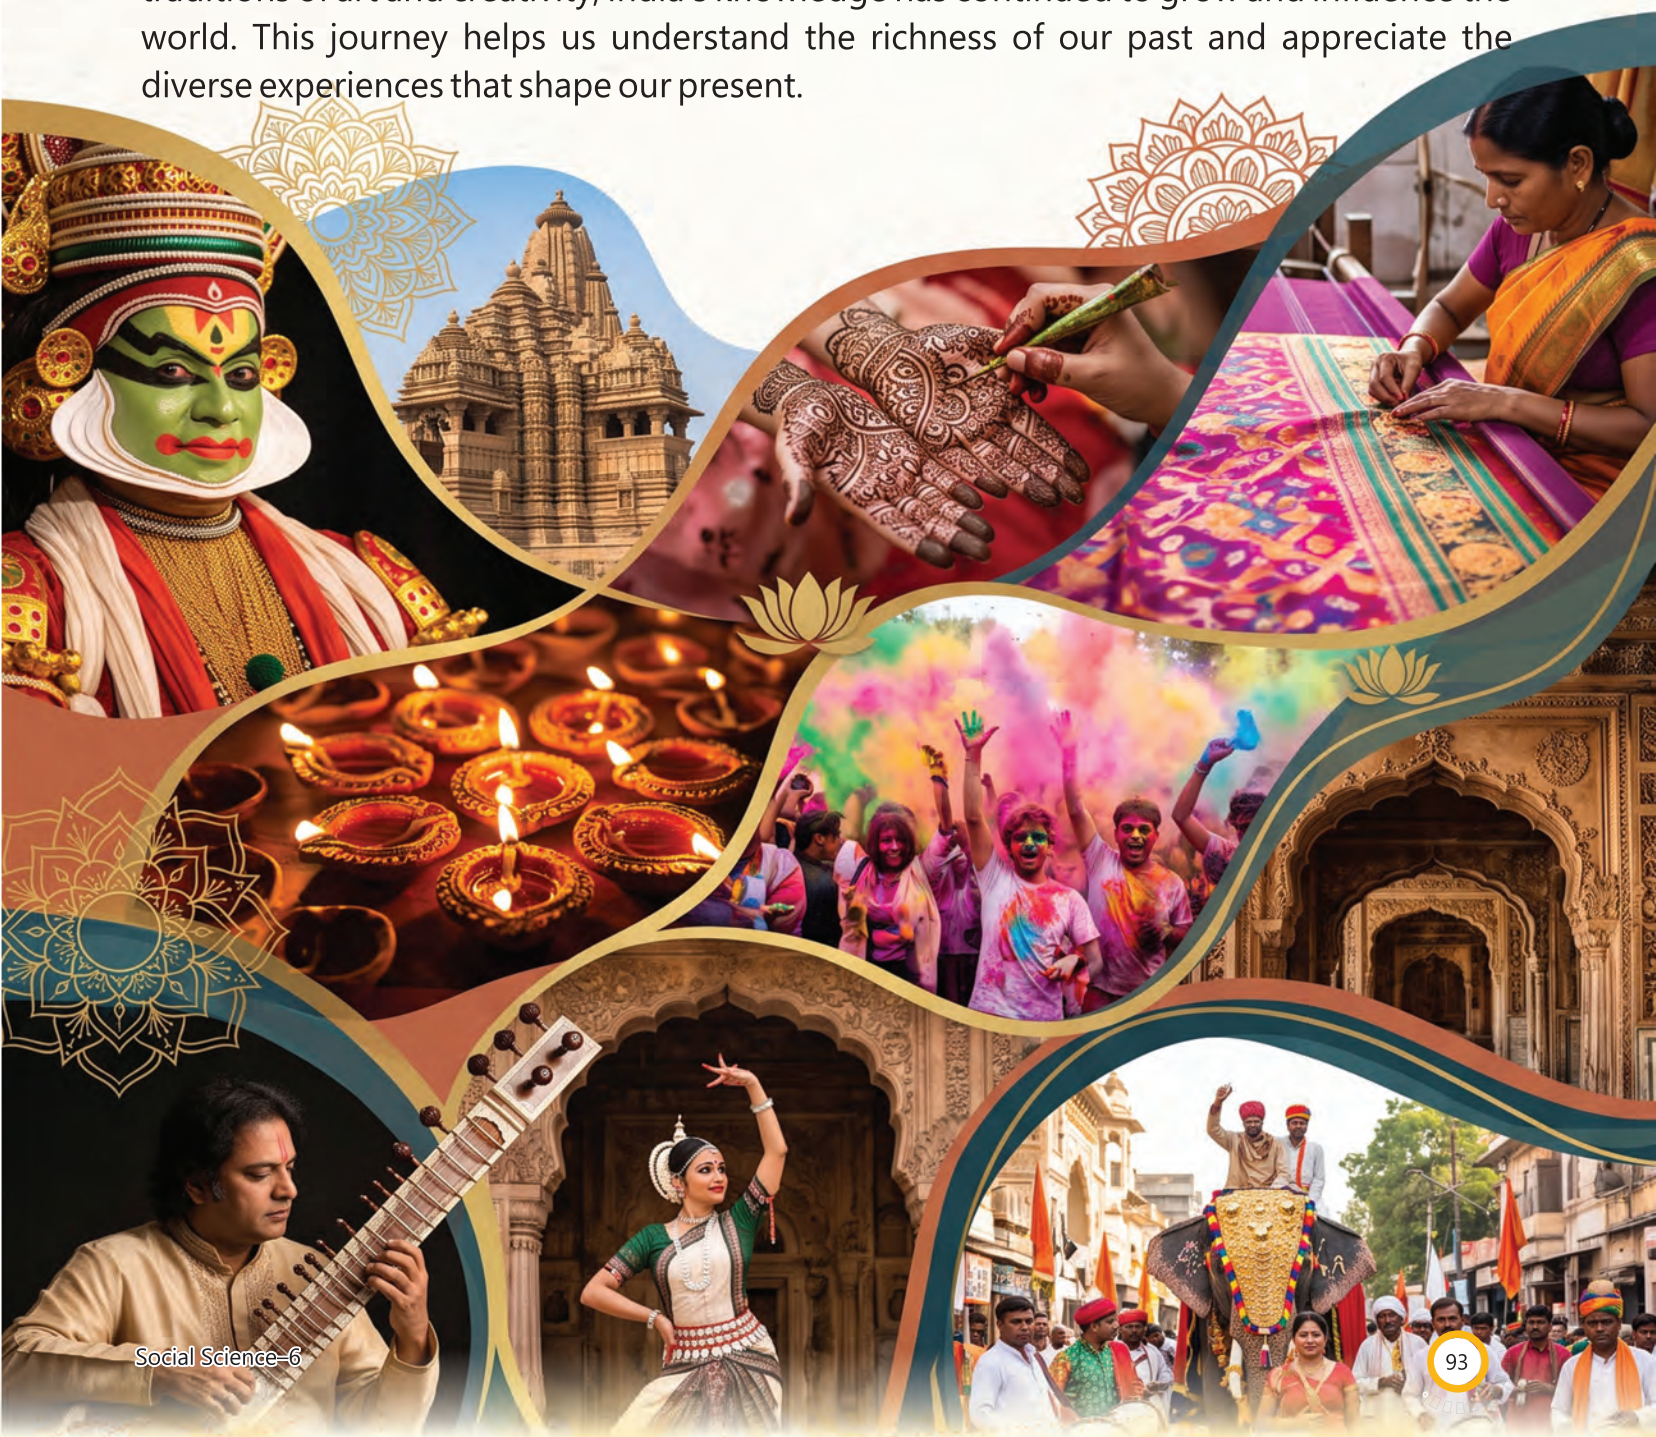
Outline Map of India

Outlined map of India

THEME–C

Our Culture, Heritage and Knowledge Traditions

India's rich heritage is a beautiful journey through time, where stories, ideas, art, traditions, and wisdom have been passed from one generation to another. The country's ancient practices, languages, festivals, crafts, and ways of life reflect the deep connection between people and their surroundings. Across different regions, communities have developed unique customs while sharing common values of respect, harmony, and togetherness. From remarkable achievements in science and learning to inspiring traditions of art and creativity, India's knowledge has continued to grow and influence the world. This journey helps us understand the richness of our past and appreciate the diverse experiences that shape our present.



7 India's Cultural Roots

Let's Learn About

- The Vedas and Vedic Tradition
- The Vedic Society
- The Upanishads
- The Teachings of Buddha
- Jain Philosophy
- Local and Tribal Origins

Let's Gear Up

Madhav felt very happy when his school announced a special exhibition about India's Cultural Roots. His grandmother often shared interesting stories about the Vedas, huge temples, colourful festivals and wise teachers like Chanakya. Wanting to know more, Madhav excitedly visited the exhibition. He enjoyed the simple models of Indus Valley homes, heard sweet folk songs and also tried writing his name in the beautiful Devanagari script. Each display showed how India's culture is not only from the past but also affects everyday life today. Traditions like yoga for health, Ayurveda for healing and respecting elders reminded Madhav of values that help society. He understood that these practices encourage kindness, unity and learning, making India's cultural roots a special treasure that joins generations and gives hope for the future with love and peace for all people everywhere.

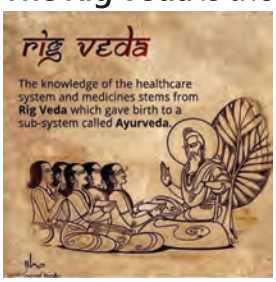
In this chapter, we will learn about some ideas and two Indian religions, Jainism and Buddhism.

THE VEDAS AND VEDIC CULTURE

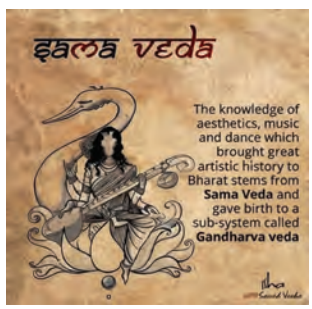
The word 'Veda' comes from the root 'vid', which means 'to know'. So, 'Veda' means 'knowledge'. It is believed that old rishis (male sages) and rishikas (female sages) wrote the Vedic hymns with help from the gods. These hymns were shared from one generation to another. When the Aryans came and lived in India, these Vedic hymns were gathered into books and arranged as we know them today.

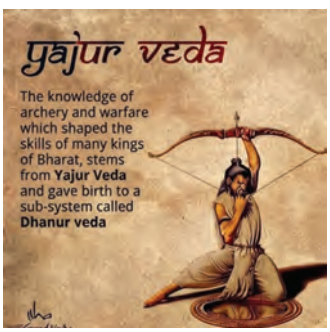
Most Vedic hymns are about different gods and goddesses like Agni (fire god), Indra (leader of gods), Varuna (water and law god), Surya (sun god), Saraswati (goddess of knowledge), Usha (goddess of dawn), Ratri (goddess of night) and others. These hymns praise the gods with beautiful and meaningful words and ask for their blessings. They also explain how to perform rituals and tell the reason and value of these practices. People believe that the deities protect the universe order (Rta), follow truth (Ritam) and bring happiness, growth and well-being to everyone today.

The Rig Veda is the oldest of the four Vedas. It was written about 3,500 years ago in Vedic Sanskrit, which differs from the classical Sanskrit learned in schools today. The Rig Veda has 10 'Mandalas' or parts. It includes 1,028 hymns that praise many Aryan gods and goddesses. Three main deities were very important: Indra, the god of war and rain; Agni, the fire god; and Soma, the sacred drink and moon god. They were greatly respected by people.



Some hymns in the Rig Veda are written as talks between people. One famous conversation is between a sage called Vishvamitra and the two rivers, Beas and Sutlej. The hymns also talk about other rivers like the Indus and its smaller rivers, along with Saraswati, Ganga and Yamuna.



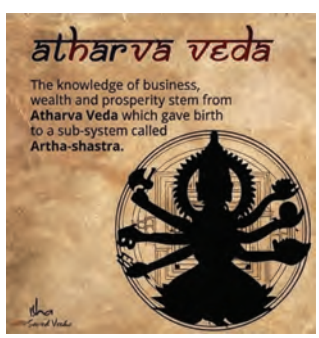


The Rig Veda gives information about the political, social, economic and spiritual life of the people in the Early Vedic Age.

The Sama Veda, also known as the "Book of Songs", has hymns sung during special sacrifices.

The Yajur Veda, also called the 'Book of Sacrificial Prayers', describes the ways to perform different rituals.

The Atharva Veda is a collection of hymns, prayers and special chants used to protect people from and remove evil spirits and harmful powers.



The Vedas were shared by speaking from one generation to another. Priests taught students to sing and remember each verse of the Vedas correctly and with care, word by word. This practice continued for many years before the Vedas were finally written

down. Later, they were printed, which occured less than two hundred years ago. The Vedas became the base of Hinduism, one of the oldest religions still followed by people worldwide today.

The Vedas, along with the Brahmanas, Upanishads, Puranas and Epics, together form what is called 'Vedic Literature'.

THE VEDIC SOCIETY

Some important features of Vedic society were as follows:

- The Vedic people lived in joint families, headed by the oldest male member, who was called the Grihapati.
- The word Jana referred to a group of people or a community. A group of villages where people of the same tribe lived was called a Jana. The Rig Veda mentions more than 30 Janas, including the Pancha Jana, Yadava Jana, the Puru Jana and Bharat Jana.
- Each Jana was ruled by a Rajan (king), who functioned as the protector (Gopa) of the people.
- The whole land area was called the Rashtra.
- The Rajan or ruler was helped by many officials like the Purohita (chief priest), Senani (army leader) and Gramani (village head).
- Councils like the Sabha and Samiti advised the king. The Sabha was a group of wise elders who gave advice on important issues, while the Samiti was a meeting of all tribal people. One main duty of the Samiti was to choose the king.
- Girls got education and were not married when they were very young. The Rig Veda mentions learned women like Ghosha, Apala and Vishwavara, who became rishis and even wrote hymns.
- Farming was the main way of earning a living. Crops like barley, wheat, cotton and oilseeds were grown.
- The Aryans ate foods like wheat, barley, vegetables, fruits and meat. Milk and dairy items were also an important part of their daily food.
- They reared domestic animals like cows, horses, dogs, goats, donkeys and sheep.
- Many types of jobs existed during the Rig Vedic Period. The Rig Veda mentions priests, weavers, cloth makers, metal workers, builders, doctors, dancers, carpenters, leather workers and potters, among others.
- Both local and foreign trade were carried out in the Vedic Age. Trade work was handled by a group called the Pani.

Go Further

Sanskrit is regarded as a member of the Indo-European language group. This group consists of Indian languages such as Sanskrit, Hindi, Assamese, Gujarati, Kashmiri, and Sindhi, as well as European languages like English, French, German, Greek, Italian, and Spanish. Languages such as Tamil, Telugu, Kannada, and Malayalam are part of the Dravidian language family. The languages spoken in north-eastern India belong to the Tibeto-Burman group, while those used in Jharkhand and certain regions of Central India are classified under the Austro-Asiatic language family.

- The main ways of land travel were horse carts and ox carts, while boats were used for trading on rivers.
- During the Later Vedic Period, around 3,000 years ago, some men became known as rajas by performing great sacrifices like the Ashvamedha Yajna and Rajasuya Yajna. Religious practices and rituals became very detailed, expensive and important for every householder. Many offerings were given to Agni, the fire god, who was believed to connect humans with the gods. Religion also developed into deeper thinking, and ideas like Punarjanma (rebirth), Karma (actions) and Moksha (freedom) started shaping people's thoughts.

Analyze Thoughts

Contrast Vedic society with present-day society. Write any three resemblances and three distinctions.

THE UPANISHADS

The word 'Upanishad' comes from three parts—upa, ni and shad. In this meaning, 'upa' means near, 'ni' means down and 'shad' means to sit. So, Upanishad means sitting near a Guru or teacher to get knowledge and learning.

Upanishadic Teacher and Students

The Upanishads are considered a part of Later Vedic writings. They mainly contain talks between teachers and students and share the ideas of many religious thinkers and spiritual leaders. Most ideas in the Upanishads are explained through easy spoken conversations and simple dialogues.

Many historians think that there are 108 Upanishads, and 11 are seen as the main ones. They were written by learned Hindu sages, mostly men, especially Brahmins and kings. However, some famous women thinkers like Gargi, Apala, Ghosha and Maitreyi also took part in important discussions in royal courts. During the 8th and 9th centuries, the great philosopher Adi Guru Shankaracharya explained and expanded many ideas from the Upanishads for future spiritual and religious.

Teachings of the Upanishads

The Upanishadic thinkers tried to answer many difficult questions. They wondered about life after death and some scholars questioned why sacrifices were performed. According to them, there is an eternal truth in the universe that remains even after death. They called it Atman, meaning individual soul, and Brahman, meaning supreme soul. They believed that basically the Atman and Brahman are the same. If a person ignores the individual soul, they are actually ignoring the universal soul which connects all beings throughout the entire universe.

The Upanishads discuss Indian philosophical ideas and explain the concepts of Karma, Maya and Mukti. They teach that the individual soul can unite with Brahman, the universal soul, through the practice of good actions (Karma). The Upanishads also describe topics like the beginning of the universe, the creation of humans, good moral behaviour, the practice of Yoga and meditation, Karma and the truths connected to life, death and human existence.

Go Further

The major Upanishads are as follows:

1. Katha
2. Taittiriya
3. Chandogya
4. Isha
5. Kena
6. Prasna
7. Mandukya
8. Aitareya
9. Mundaka
10. Svetasvatara
11. Brihadaranyaka

In the Later Vedic Period, many other important written works were also created. These texts discussed topics like grammar, literature, astrology, astronomy, medicine (Ayurveda), military studies (Dhanurveda), music (Gandharvaveda) and many more. A famous scholar, Panini, prepared a well-organized grammar of Sanskrit. He arranged vowels and consonants in a fixed order and used them to make short rules that explained the basic ideas of the language in detail.

The Six Branches of Indian Philosophy

The six branches of Indian philosophy and their founders are:

1. Vaisheshika by Konada
2. Nyaya by Gautama
3. Samkhya by Kapila
4. Yoga by Patanjali
5. Purva Mimamsa by Jaimini
6. Vedanta or Uttara Mimamsa by Vyasa

Although these six schools appear different from one another, they share a fundamental harmony in their intellectual pursuit of truth. These philosophical systems continue to influence scholarly discussions in our country. According to Max Muller, a German-born British scholar of Indian studies, these six philosophical systems evolved over many generations, with numerous thinkers contributing their individual insights.

In-Text Questions

A. Complete the sentences.

1. The term "Veda" signifies .....
2. Saraswati was the goddess of .....
3. ..... is known as the Book of Chants.
4. ..... means to sit near the teacher or Guru to receive instruction.
5. ..... compiled a grammar for Sanskrit.

B. Can you recall any hymn from the Vedas? Which Veda does it come from? Explain its meaning to your friends.

BUDDHISM

Buddhism was started by Gautama Buddha (563–483 BCE) in India, about 2,500 years ago. He did not follow strict religious rules but taught the Middle Way, making Buddhism attractive to common people everywhere.

A statue of Buddha from Sarnath, 4th century BC.

Early Life

The birth name of the Buddha was Siddhartha Gautama. He was a Kshatriya prince. He was born in 563 BCE in the Lumbini forest near Kapilvastu, at the base of Nepal's hills. His father, Suddhodana, was the head of the Shakya clan of Kapilvastu. His mother, Mahamaya, died when Siddhartha was only seven days old. As a prince, Siddhartha enjoyed a very comfortable and luxurious life. At the age of 19, he married Princess Yasodhara and had a son called Rahul as well.

Lumbini Pillar

The Four Great Signs

One day while travelling in the city in his chariot, Siddhartha first saw an old man, then a very ill person and later a dead body. These sights deeply troubled him and made him think about life. Finally, he saw an ascetic who looked calm and free from worldly things. Siddhartha wished to understand the mystery of life and death. At the age of 29, he left his home to search for truth. The old man, sick man, dead body and ascetic are called the 'Four Great Signs' by Buddhist scholars while studying his life.

Search for Truth

Siddhartha travelled for six years. He then sat under a Pipal tree in Gaya and began to meditate. On the forty-ninth day, at age 35, he gained Supreme Knowledge or Enlightenment. From that time onwards, he was called the 'Buddha' or 'The Enlightened One' by people.

Gautama Buddha undertaking extreme ascetic practices before his enlightenment on the bank of the river Falgu in Bodhgaya, Bihar.

Sarnath Stupa

The Pipal tree where he received Supreme Knowledge became known as the Tree of Wisdom or Bodhi Vriksha. He gave his first teaching at Sarnath near Varanasi. This was called Dharmachakra Pravartana or the 'turning of the wheel of Dharma'. Gautama Buddha then walked to many parts of the country. He died at the age of 80 in 483 BCE at Kushinagar in Uttar Pradesh.

Teachings of Buddhism

The core teachings of Buddhism are found in the Four Noble Truths and the Eightfold Path.

The Four Noble Truths

1. The truth of suffering (Dukkha)
2. The truth of the origin of suffering (Samudaya)
3. The truth of the cessation of suffering (Nirodha)
4. The truth of the path leading to the cessation of suffering (Magga)

The Dharma Wheel, often used to represent the Noble Eightfold Path

The Eightfold Path (Ashtangika Marga)

1· Correct belief or comprehension
2· Correct intention
3· Correct speech
4· Correct conduct
5· Correct way of earning a living
6· Correct effort
7· Correct mindfulness
8· Correct meditation, focus or absorption

Gautama Buddha believed that the Eightfold Path guided a person towards the Middle Path or the path of balance. By following this path, a person finally freed himself from the cycle of birth, death and rebirth and achieved Nirvana or Moksha. Buddha rejected animal sacrifices and rituals. He strongly taught Ahimsa or non-violence for all living beings. He gave great importance to conduct or Karma. Good deeds are rewarded and bad deeds are punished. Buddha taught equality among all men and women and strongly opposed the caste system. He gave importance to moral values like honesty, kindness and respect for elders. He encouraged people to think for themselves rather than simply accept everything said by others without careful thought.

Analyze Thoughts

Which of Buddha's teachings did you like the most and why?

Buddha used many ways to share his teachings with people. He spoke in Prakrit, the language of ordinary people, so everyone could understand his message easily. Both men and women could join the Buddhist Sangha. The Buddhist Sangha was a group of bhikshus (monks) and bhikshunis (nuns) who followed Buddha's teachings and taught them to others through their lives with great care and devotion.

The clear teachings and the message of equality attracted many people. With time, Buddhism spread not only in India but also to countries like Tibet, China, Nepal, Sri Lanka, Myanmar (Burma), Mesopotamia, Syria, Egypt, Macedonia, Central Asia and Japan.

Buddhist Councils

After Gautama Buddha's death, four councils were held in different places to record his teachings and sermons and gather them together in books for people.

- First Council: at Saptaparni Cave near Rajgir
- Second Council: at Vaishali

Go Further

According to a Buddhist scripture, just as the waters of different rivers lose their names and individual identity when they merge into the vast ocean, in the same way, Varna, social status and family background are set aside when the disciples of Buddha enter the monastic order.

- Third Council: at Pataliputra
- Fourth Council: at Kundalvana in Kashmir

Buddhist Texts

The Buddhist books called Tripitaka (The Three Baskets) contain Buddha's teachings. They are written in the Pali language and divided into three main parts:

1. Sutta Pitaka
2. Vinaya Pitaka
3. Abhidhamma Pitaka

The Jatakas are tales about Gautama's earlier lives before becoming Buddha.

Buddhist Sects

In the first century AD, during King Kanishka's rule, Buddhism divided into two sects: the Hinayana, which saw Buddha as a teacher; and the Mahayana, which considered Buddha as a god and followed his teachings.

Statue of the Buddha at Bodh Gaya

Spread of Buddhism

Many reasons helped Buddhism become widely accepted in India and other countries as well.

- **Clarity of Teachings:** Buddha opposed rituals, sacrifices, and blind beliefs. He focused on truth and Karma. His easy and useful teachings attracted people from different parts of society.
- **Principle of Equality:** He opposed the caste system and the high status of the Brahmin class. His ideas were fair, and he treated all people equally.
- **Ease of Adaptation:** The easy teachings of Buddhism could be easily changed to suit the needs of different areas. As a result, Buddhism spread to many countries outside India.
- **Language:** Gautama Buddha taught in Prakrit, the language of common people, so his teachings could be easily understood by more people.
- **Character of the Buddha:** Gautama Buddha left his rich life to serve common people. His qualities, love for truth, knowledge and simple way of living attracted people towards him.
- **Royal Support:** Kings such as Ashoka and Kanishka followed Buddhism and sent missionaries to other countries to spread Buddhist teachings.
- **Buddhist Sangha:** The Sangha started by Gautama Buddha preserved and shared his teachings among

Ashoka specifically assigned a group of officials called the Dhamma-Mahamattas, who traveled around and disseminated the teachings of Buddha among the people.

Pali Language

ordinary people. Buddhist monasteries became important places of learning and education.

Decline of Buddhism

Although Buddhism became very popular in India, it could not completely replace Hinduism. With time, it began to decline during the rule of Hindu kings from the Gupta and Rajput dynasties.

The main reasons for its decline were:

- Weakness of the Buddhist Sangha
- Revival of Hinduism under Sri Adi Shankaracharya
- Support for Hinduism by the Gupta rulers
- Splitting of Buddhism into groups
- Loss of royal support from Hindu kings
- Hinduism supported by Rajput kings, who were brave warriors and did not follow the idea of Ahimsa

Sri Adi Shankaracharya
(AD 788-820)

In-Text Questions

Give one word answer for the following.

1. The tree beneath which Buddha gained enlightenment.
2. The location where Buddha gave his first discourse.
3. The city where the third Buddhist council took place.
4. A ruler who followed Buddhism.
5. The language used by Buddha for preaching.

JAINISM

Vardhamana Mahavira is considered the founder of Jainism. He was the twenty-fourth and final Tirthankara or spiritual teacher, who developed the ideas of Jainism. His teachings became the base of Jainism. The first Tirthankara was Rishabhadeva and the twenty-third Tirthankara was Parshvanath. Parshvanath's main teachings were: non-violence, non-stealing, truth and non-possessiveness. He created a proper system. The followers of this religion are called Jains.

परस्परोपग्रहोजीवानाम्

Vardhamana Mahavira (540-468 BC)

It was Vardhamana Mahavira who gave clear direction to Jainism and created its ideas and teachings.

Early Life

Mahavira was born in 540 BC at Kundagrama, near Vaishali in present-day Bihar. He belonged to a royal Kshatriya family. His father Siddhartha was the leader of a Kshatriya clan called Jnatrikas. His

mother Trishala was a princess of the Lichchhavi clan. Vardhamana got early education in different areas of knowledge and arts. He married Yashoda and had one daughter. At the age of thirty, Mahavira left his home to search for truth.

Miniature Painting of Mahavira

Search for Truth

Vardhamana travelled from place to place for twelve years, practicing meditation. In the thirteenth year, he attained Nirvana under a Sal tree on the outskirts of a town called Jrimbhikagrama. He was then known as Mahavira, the great hero, or Jina, the conqueror. His disciples came to be called Nirgranthis, meaning free from attachments. For the next thirty years, he traveled widely and taught his principles. He passed away in 468 BCE at the age of seventy-two at Pavapuri near Rajgir, Bihar.

Teachings of Mahavira

The teachings of Mahavira can be summarized as follows:

- **Ahimsa (Non-violence):** Mahavira stressed the value of non-violence. He said, "All living beings want to live. Life is valuable for everyone." He believed that humans, animals, fire, air and plants also have souls. Therefore, no living being, including insects and plants, should be harmed or hurt in any way.
- **Simple Living:** Mahavira encouraged a simple way of living. He opposed collecting too much wealth or property. He said that people who search for truth must first give up all their belongings. He called this "Aparigraha," which means non-possession.
- **Truthfulness:** He taught people to be truthful and honest. He said that truth has many viewpoints and cannot be explained through only one statement. He called this "Anekantavada," which means "not only one".
- **Rejection of Rituals:** He did not believe in the existence of God. He opposed the chanting of mantras, rituals and sacrifices.
- **Equality:** He believed that all people were equal and rejected any type of discrimination based on caste.
- **Karma and Moksha:** He followed the ideas of Karma and Moksha. He encouraged doing good actions (Karma) to achieve Moksha, which means freedom from the cycle of birth, death and rebirth. He said that Moksha can be achieved by following the Tri-ratnas or Three Jewels of Jainism, namely:
  1. Right Faith (Samyak Darshan)
  2. Right Conduct (Samyak Charitra)
  3. Right Knowledge (Samyak Jnana)

Go Further

The word 'Jina' referred to a person who had conquered their desires and emotions and achieved supreme wisdom.

Idol of Lord Mahavira at Shri Mahavirji (Rajasthan)

Mahavira taught in Prakrit, the language of ordinary people. Soon, his ideas and teachings

became accepted by the common people.

Go Further

Different varieties of the Prakrit language were spoken in various parts of the country. They were named after the regions where they were used. For instance, the Prakrit spoken in Magadha and Mithila was called Magadhi and Maithili, respectively.

A Jain Scripture in Prakrit

Jain Councils

Two Jain meetings were held after Mahavira's death to write down all his teachings and principles. These groups organized them into written books. The first meeting happened at Pataliputra in the 3rd century BCE. The second meeting was held at Valabhi in Gujarat in the 5th century CE as well.

Jain Texts

TIMELINE

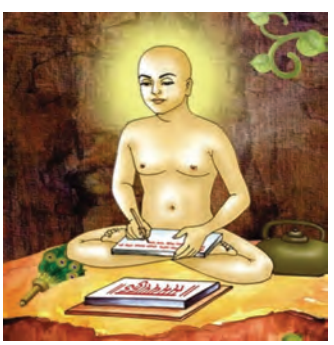
540-468 BC : Vardhamana Mahavira

3rd century BC : The First Jain Councilat Pataliputra

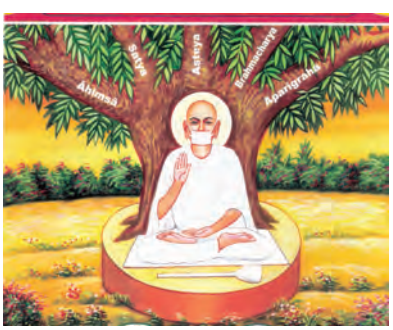
5th century BC : The Second Jain Council at Valabhi

563-483 BC : Gautama Buddha

The sacred books of the Jains are called Agama-Siddhanta. The 12 Angas are the first and most important part of their religious writings. The Siddhanta has 45 to 50 books. Later, 12 Upangas or smaller sections were also added. Mahavira's teachings are written in Ardha-Magadhi Prakrit. Jain monks also wrote Niryuktis or explanations. These were first written in Prakrit, but later Sanskrit was used too.



A Digambara Jain



A Svetambara Jain

Jain Sects

Around 300 BC, Jainism split into two groups – the Digambaras and the Svetambaras. Digambara means 'sky-clad' or 'without clothes'. The followers of the Digambara group do not wear clothes and strictly follow the original teachings of Lord Mahavira.

Svetambara means 'dressed in white'. The followers of this branch

wear white clothes and do not follow a life of strict penance. Later, the Digambaras made South India their main region, while the Svetambaras settled in Rajasthan and Gujarat.

Spread of Jainism

The main reasons for the spread of Jainism among common people were:

- **Simple Language:** Mahavira taught in Prakrit, the language of common people, which helped them easily understand his teachings.
- **Principle of Equality:** Mahavira opposed caste differences and believed all people were equal. He welcomed people from every section of society into the new religion. This attracted many followers.
- **Character of Mahavira:** Mahavira showed people the way to search for truth through his own life. He left his home, travelled for many years and practiced different hardships before imparting these teachings to others.
- **Royal Support:** The great Maurya ruler Chandragupta was a faithful follower of Jainism. King Kharavela of Kalinga supported Jain teachings and personally placed Jain images. Jainism was an important religion in Mathura during the Kushana period and in Eastern India during Harsha's rule. Later, many royal families in the South accepted Jainism. They helped Jain art and literature grow, gave donations to Jain monks, and encouraged the building of Jain temples.

Lord Mahavira's attainment of Kevalajnana

Decline of Jainism

The main reasons for the decline of Jainism were:

- Lack of royal support during the region of the Gupta rulers.
- Division within Jainism.
- Absence of a great teacher after Lord Mahavira.
- Internal conflicts among lower groups of society, which stopped them from joining together for a religious purpose.
- Jainism had to face competition from both Buddhism and the Hindu revival movement.

Jainism was mostly supported by traders. It spread to different areas of North India, Gujarat, Tamil Nadu and Karnataka. The teachings of Mahavira and his followers were passed down orally for many centuries. They were written down in their current form only about 1,500 years ago at Valabhi in Gujarat.

Today, Jains are mainly found in Maharashtra, Rajasthan, Gujarat, some parts of Madhya Pradesh and Karnataka. They are mostly rich and successful traders and have built many charity centres like hospitals, rest houses

In-Text Questions

State True or False :

1. The twenty-third Tirthankara was Parshvanath.
2. Mahavira attained liberation (Nirvana) under a Pipal tree.
3. The first Jain council took place at Vaishali.
4. The teachings of Mahavira are recorded in Ardha-Magadhi Prakrit.
5. The Gupta rulers practiced Hinduism.

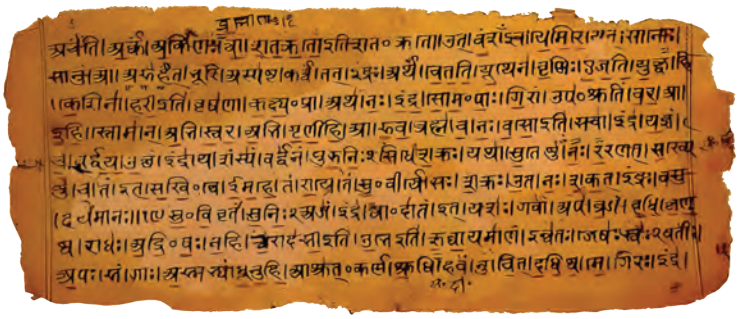
(dharamshalas) and shelters for animals. They actively work for social change, spreading education and the growth of their religion.

FOLK AND TRIBAL ROOTS

The rich cultural diversity of India is also shown through its various tribal and folk traditions, each having its own special customs, language, beliefs, art and dances.

A tribe is made up of a group of related families living together in small villages or settlements. Usually, two or three generations of one family live together in a tribe.

The first references to tribes in India are found in ancient Vedic texts, especially the Rigveda. As learned earlier in this chapter, the Rigveda mentions names of more than 30 tribes or groups, called "janas", including Pancha Jana, Yadava Jana, Puru Jana and Bharata Jana.



Rigveda

These early tribes were often semi-nomadic and engaged in herding, farming and warfare. According to the 2011 Census, India has 705 officially recognized tribes, which make up 8.6% of the total population, approximately 104 million people.

Chief Features of Tribes

The main features of tribes are as follows:

- They do work like gathering, hunting, herding, fishing and farming to earn their living. Farm work such as preparing the land, sowing seeds, caring for crops and harvesting is usually done by women, while men take the animals to find grazing land. Children often look after the crops and drive away animals and birds that may harm or eat them. Caring for animals and milking are done by both men and women. Together, they also make baskets, pots, tools and homes.
- Both men and women join in dancing, singing, and decorating their homes.
- Tribes have their own language, music, folk stories and paintings, which are part of their rich and unique cultural heritage. They also worship their own deities.
- Some men become leaders of the tribal community because of their natural abilities. They may be experienced older men, priests, or brave young warriors. Older women are respected for their wisdom and experience.
- Land, forests, grasslands and water and their use are seen as the shared wealth of the tribe. These resources are used together by everyone. Rich and poor live peacefully without major differences. This spirit of co-operation and equality makes tribes different from many other societies.

Analyze Thoughts

Can you identify any common ideas in the teachings of Buddhism and Jainism? Write them down in your notebook.

Folk culture includes the traditional arts, music, dance and customs followed by rural and tribal communities of the country. Folk culture is a living heritage in India passed from one generation to another through folk tales, myths, legends, songs, stories and proverbs. These tales, myths, legends, songs and stories were not written down but were passed orally by common people and tribes. Learning about tribal and folk traditions helps us better understand our country's ancient history and cultural heritage.

Do you know?

The Gond community of Chhattisgarh follows a traditional self-rule system called the Ghotul, where youth are taught about social values and duties. The Ghotul is regarded as an independent children's commune. It serves as a meeting place for unmarried boys and girls, where they take part in activities like singing, dancing, storytelling and learning about their cultural heritage. They also develop values such as discipline, diligence, respect for elders and service to the community.

Gond tribe of Chhattisgarh

Most folk traditions and cultural practices of tribes are similar to those of Hinduism. They all share a close connection with nature, customs and local beliefs. They mainly worship deities linked to natural elements like the sun, moon, earth and water, and ask for their blessings and guidance. The worship of Lord Jagannath, especially in Odisha, also has strong connections with tribal traditions. Lord Jagannath is often linked with the tribal god Neela Madhava, a form of Lord Vishnu worshipped by the Sabara tribe, a native community of Odisha. Tribal people also worship gods and goddesses connected with fertility, farming, ancestors and the cycle of life.

Ayyanar, Tamil Nadu

Some commonly worshipped deities among the rural and tribal communities of India are:

- **Gramadevata (Village gods):** These were local guardian gods, often shown by stone statues in village shrines. They protected the village and its people. Examples include Ayyanar (Tamil Nadu) and Khandoba (Maharashtra).
- **Mother Goddess:** A female goddess connected with fertility, womanhood, abundance, wealth and protection. Many figurines of the Mother Goddess have been discovered at Indus Valley sites. She was worshipped through rituals linked with fertility, seasonal festivals and offerings.
- **Nature Spirits:** These are supernatural beings believed to live in natural places like mountains, rivers, trees and forests. They are respected for their blessings through rituals, prayers and offerings. Examples include rivers like the Ganga and Yamuna, the forest spirit Bonbibi of Bengal and the Nilgiris in Tamil Nadu. The Toda community

Toda tribes, Tamil Nadu

lives in the Nilgiri hills of Tamil Nadu. They believe that more than thirty peaks of the Nilgiri range are homes of some gods and goddesses. These thirty peaks are very sacred to the Toda people, so they avoid pointing towards them with their fingers

- **Creator Deities:** These are gods and goddesses believed to have created the world and living beings. They are respected through rituals and festivals. Examples include God Dharmesh and Singbonga worshipped by the Munda and Santhal tribes of Chotanagpur, Lord Donyipolo, a combined form of the Sun and Moon worshipped by tribes of Arunachal Pradesh, and God Khandoba worshipped in parts of Central India and the Western Deccan region.

Lord Donyipolo

Due to city growth, cutting of forests, shifting of homes and loss of ancestral lands, tribal communities face many problems. However, they have shown great strength and patience over time. They continue to grow and protect their identity and cultural heritage.

Analyze Thoughts

Think of some measures that can be taken to improve the life of the tribals.

In-Text Questions

State whether True or False.

1. Numerous tribal groups in India celebrate their own distinct festivals.
2. The Rig Veda lists the names of more than 30 tribes or communities.
3. Folk songs and dances in India are performed only during religious celebrations.
4. Folk literature consists of oral traditions, myths, legends, tales, sayings and epic stories.
5. Deity Khandoba is venerated in certain regions of Central India.

IMPORTANT TERMS

- **Tirthankara:** Spiritual teacher or guide
- **Karma Marg:** Path of righteous actions
- **Upanishads:** Later Hindu spiritual texts
- **Bhakti Marg:** Path of devotional love
- **Gyan Marg:** Way of true knowledge
- **Jina:** Conqueror of worldly desires
- **Gana:** Clan or social group
- **Ascetic:** Self-denying spiritual practitioner
- **Enlightenment:** Realization of ultimate truth
- **Viharas:** Monastic residences for monks
- **Nirvana:** Freedom from worldly suffering
- **Sermon:** Religious teaching or discourse
- **Tanha:** Craving or worldly desire
- **Moksha:** Liberation from rebirth cycle
- **Ahimsa:** Principle of non-violence
- **Prakrit:** Common vernacular language
- **Monk:** Man practicing spiritual renunciation

- **Nun:** Female spiritual renunciant
- **Consciousness:** Awareness of self, surroundings
- **Attachment:** Emotional or habitual bond
- **Spiritual:** Pertaining to the inner essence
- **Atman:** Eternal soul or self
- **Cosmic:** Related to the universe
- **Healer:** Traditional illness-treating practitioner

QUICK TAKE

- Veda comes from "vid," meaning "to know." Veda means divine knowledge and wisdom.
- Rigveda: Collection of holy hymns praising gods and natural forces.
- Samaveda: Musical verses mainly taken from Rigveda hymns.
- Yajurveda: Instructions for rituals, ceremonies and holy offerings.
- Atharvaveda: Spells, prayers and charms for protection from harm.
- Upanishad means "sit near the teacher to learn."
- Wise thinkers studied life's secrets, meditation, karma, human beginnings, yoga and the mysteries of the universe.
- Buddhism:
  1. Founder: Gautama Buddha
     (i) Birthplace: Lumbini near Kapilavastu | Mother: Mahamaya | Father: Shuddhodana
     (ii) Wife: Yashodhara | Son: Rahul | Left home: age 29
     (iii)Enlightenment: Bodh Gaya, Bihar | First Sermon: Sarnath
  2. Teachings:
     (i) Four Noble Truths | Practice non-violence | Reject caste divisions | Follow the Eightfold Path
     (ii) Believe in karma, mindfulness and ethical living
  3. Spread widely to India, Tibet, China, Nepal, Sri Lanka, Myanmar (Burma) and Japan.
- Jainism:
  1. Founder: Vardhamana Mahavira
     (i) 24th Tirthankara | Father: Siddhartha | Wife: Yashoda
     (ii) Birthplace: Kundagrama, Bihar | Mother: Trishala | Left home: age 30
     (iii)After Enlightenment: Called Jina | Death: Pawapuri | Preached in Prakrit
  2. Teachings:
     (i) Follow Ahimsa, truthfulness, non-stealing, control of desires and chastity
     (ii) Follow the Three Jewels: Right Knowledge, Right Faith and Right Conduct
  3. Popular among traders / Spread in North India, Gujarat, Tamil Nadu and Karnataka

Tribe: Group of related families in small villages.

Folk culture: Local arts, songs, dances, stories, myths, legends and oral traditions.

I. OBJECTIVE TYPE QUESTIONS

A. Choose the correct answer.

1. Mahavira was the Tirthankara.
   (a) 21st ☐ (b) 22nd ☐ (c) 23rd ☐ (d) 24th ☐
2. Mahavira taught his teachings in the language of common people.
   (a) Pali ☐ (b) Prakrit ☐ (c) Sanskrit ☐ (d) English ☐
3. Mahavira died at _____ .
   (a) Gaya ☐ (b) Kashi ☐ (c) Pavapuri ☐ (d) Haridwar ☐
4. Gautama Buddha gave his first sermon at _____ .
   (a) Prayag ☐ (b) Kashi ☐ (c) Mathura ☐ (d) Sarnath ☐
5. Gautama Buddha was married to _____ .
   (a) Radha ☐ (b) Rukmini ☐ (c) Yasodhara ☐ (d) Trishala ☐
6. Gautama Buddha was born at _____ .
   (a) Pataliputra ☐ (b) Gaya ☐ (c) Varanasi ☐ (d) Lumbini ☐
7. Gautama Buddha attained Enlightenment under the tree _____ .
   (a) Pipal ☐ (b) Teak ☐ (c) Sal ☐ (d) Sandalwood ☐
8. The Second Jain Council was held at _____ .
   (a) Pataliputra ☐ (b) Ujjain ☐ (c) Valabhi ☐ (d) Vaishali ☐

B. Write 'T' for True or 'F' for False.

1. Buddha attained enlightenment at Kusinara. ☐
2. The followers of Jainism were expected to be honest and follow good morals. ☐
3. The followers of Buddhism and Jainism were allowed to live away from their homes in separate places called Sanghas. ☐
4. According to Buddha, the main reason for human suffering is the desire to gain more and more. ☐
5. The Later Vedic texts that contain talks between teachers and students are called the Upanishads. ☐

C. Assertion-Reason

For question numbers 1 to 4, two statements are provided—one called Assertion (A) and the other called Reason (R). Choose the correct option from the codes (a), (b), (c) and (d) given below:

1. **Assertion (A):** Siddhartha achieved complete wisdom or enlightenment at the age of 35.
   Reason (R): After this, he was called the "Buddha" or the Enlightened One.
2. **Assertion (A):** The Upanishads rejected the idea of Karma.
   Reason (R): They supported good conduct and the practice of Yoga.

3. **Assertion (A):** Buddha taught the Noble Eightfold Path.

   Reason (R): Mahavira opposed violence against all living beings.

4. **Assertion (A):** Gautama Buddha was born in Lumbini.

   Reason (R): He died at Pavapuri

   (a) Both Assertion (A) and Reason (R) are correct and Reason (R) properly explains Assertion (A).

   (b) Both Assertion (A) and Reason (R) are correct but Reason (R) does not correctly explain Assertion (A).

   (c) Assertion (A) is correct but Reason (R) is incorrect.

   (d) Assertion (A) is incorrect but Reason (R) is correct.

D. Choose the option that correctly matches items from Column A and B.

Column A	Column B
1. Second Council of Buddhism	(i) Vardhamana Mahavira
2. Fourth Council of Buddhism	(ii) Pataliputra
3. First Council of Jainism	(iii) Vaishali
4. The Founder of Jainism	(iv) Kashmir

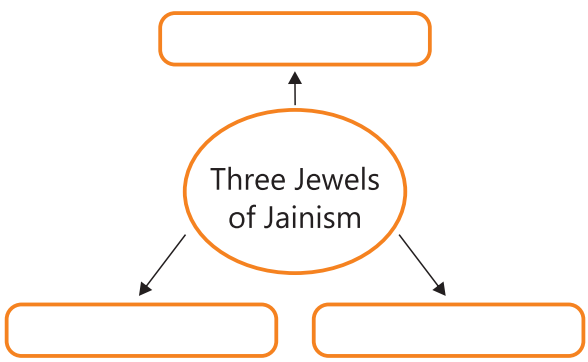
(a) 1.-(iv), 2.-(iii), 3.-(i), 4.-(ii)

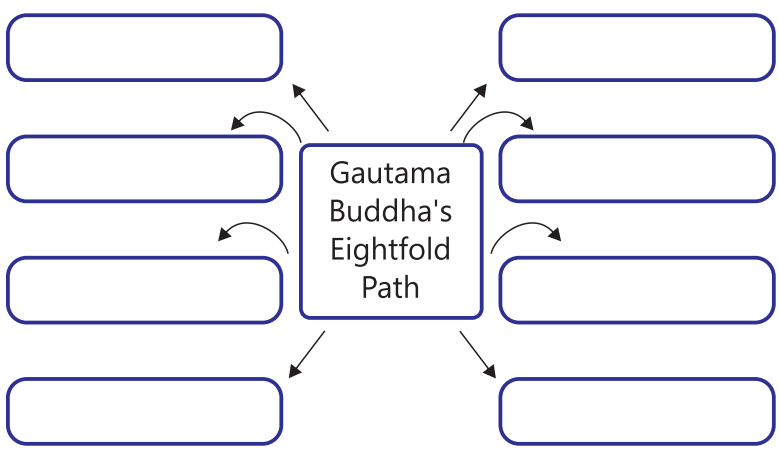
(b) 1.-(i), 2.-(ii), 3.-(iv), 4.-(iii)

(c) 1.-(ii), 2.-(i), 3.-(iv), 4.-(iii)

(d) 1.-(iii), 2.-(iv), 3.-(ii), 4.-(i)

E. Fill in the blanks.





II. SHORT ANSWER TYPE QUESTIONS

1. Explain the Noble Eightfold Path taught by Lord Buddha that helps a person achieve salvation or freedom (Nirvana/Moksha).
2. What questions did the thinkers of the Upanishads try to answer?
3. Write a short note on the life of Lord Buddha.
4. Write a brief description of the life of Vardhamana Mahavira.
5. Explain any three main features of tribal societies.

III. LONG ANSWER TYPE QUESTIONS

1. What were the central principles preached by Lord Buddha?
2. Explain the important teachings of Mahavira.
3. Write a short description of India's rich and varied folk traditions.
4. Write a brief account of the main ideas of the Upanishadic philosophers.

IV. PICTURE STUDY

1. Who is shown sitting under the tree in the picture?
2. Which important event of his life is shown in this picture?
3. What is the name of the tree where he attained Enlightenment?
4. After attaining Enlightenment, by what name was Siddhartha Gautama known?

V. SOURCE BASED QUESTIONS

Read the given passage and answer the following questions.

The Vedas, whose name mean "knowledge," are ancient texts written by sages and passed down by speaking before they were written. They praise gods like Indra, Agni and Varuna and guide rituals that maintained the order of the universe. The Rig Veda, the oldest Veda, gives information about early society, economy and religious beliefs. Later texts like the Upanishads discussed ideas such as Atman, Brahman, Karma and Moksha. Buddhism, founded by Gautama Buddha, taught kindness and the Middle Way instead of difficult rituals. Together, these traditions helped shape Indian culture by encouraging wisdom, good living and the search for spiritual knowledge that continues even today.

1. Why do you think the Vedas were passed orally for a long time before being written?
   (a) To keep knowledge secret ☐ (b) Sacred oral tradition ☐
   (c) Writing unavailable ☐ (d) Inability to write ☐
2. What does the Rig Veda show about early Indian society besides worship of gods?
   (a) House building ☐ (b) Society and spirituality ☐
   (c) Wars and battles ☐ (d) Farming techniques ☐
3. How is the Buddhist idea of the Middle Way different from the ritual focus of the Vedas?
   (a) More difficult rituals ☐ (b) Fire worship only ☐
   (c) Avoids extremes ☐ (d) Rituals only ☐
4. Why may ideas like Atman, Brahman, Karma and Moksha still inspire people today?
   (a) Ancient rituals ☐ (b) Easy to memorize ☐
   (c) No longer relevant ☐ (d) Universal truths ☐

ACTIVITIES & PROJECTS

Local Heritage Walk & Documentation

- Organize a visit to a nearby temple, fort, museum or historical place.
- Students record their observations through photos, drawings or journals.
- Share how the place connects with India's cultural heritage.

8 Unity in Diversity, or 'Many in the one'

Let's Learn About

- Abundant Variety
- Diversity of Food
- Textiles and Clothing
- Festivals Galore
- An epic spread

Let's Gear Up

One morning, the school garden looked like a dream. Flowers of many colours—red roses, yellow marigolds, purple lilies—were growing together. A group of children saw that each flower was different, but all made the garden pretty. Nanya said, "It is like our class! We speak many languages, eat different foods and enjoy different festivals." Arjun said, "But when we play, learn or sing together, we become one happy family." The teacher smiled and said, "This is Unity in Diversity. Many flowers make one garden, and many people make one nation."

Variety enriches our lives better. The unique differences within a diverse community benifits us in many ways.

- **Cultural advancement**: Communities with a diverse population enjoy a lively cultural exchange among their people through many festivals, traditions, foods, languages, clothes and more.
- **Broader representation and efficient administration:** A diverse community often brings better representation of all groups in society and smooth management. The leaders must think about the needs, wishes and problems of all people while making rules.

- **Economic development:** A nation with a diverse population often sees strong economic growth, because people with different skills, abilities and experiences help increase overall productivity.
- **Heightened tolerance and acceptance:** A diverse population respects each other's views and differences, creating a culture of kindness and mutual respect.
- **Social concord and comprehension:** The different groups in a community develop care and understanding for each other. This helps create a peaceful and happy society.

A RICH DIVERSITY

India is a country of many differences. This variety can be seen in its land, religions, customs, traditions, languages, foods, jobs and more. The land of India has the tall Himalayas in the north, dry deserts in the northwest, fertile Ganga plains and green tropical forests in the south and northeast. People in India follow different religions, celebrate many festivals, speak various languages and eat many types of food. They live together with love and respect in one nation.

India has more than 1.4 billion people, making up nearly 18% of the world's population. The country has 22 official languages and hundreds of dialects spoken in different states. Hindi, Punjabi, Bengali, Gujarati, Assamese, Telugu, Marathi, Tamil and Urdu are some of the main languages spoken in India. *The People of India* project, started by the Anthropological Survey of India, is one of the largest studies of people and cultures in the world. Begun in 1985, the study looked at India's population diversity, mainly focusing on ethnic, language and cultural features. Finished in the early 1990s, the survey recorded more than 4,635 communities across the country. It listed about 325 languages and dialects using 25 scripts. The study also examined major religions and beliefs followed in the nation. It showed the idea of unity in diversity, which is an important part of India.

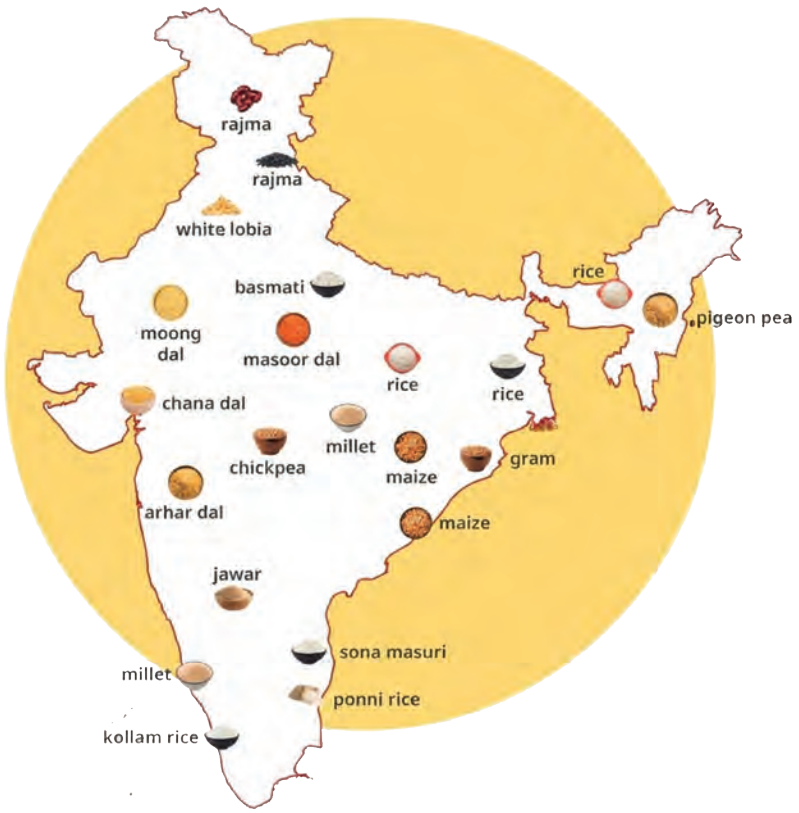
India: Unity in Diversity

Variety or the many differences in regional, cultural and religious backgrounds of people helps make India very interesting and diverse. The phrase "*unity in diversity*" is a suitable way to describe India. This phrase was given by Pt. Jawaharlal Nehru. He discussed Indian unity in his famous book, *The Discovery of India*. He said that Indian unity is not forced from outside but comes from within. He also explained that India accepts many religions and traditions, and respects every difference. Let us now learn about some parts of Indian life that truly show *Unity in Diversity* and make India a special nation full of pride.

FOOD FOR ALL

India is famous for its wide variety of foods and cooking styles, each having its own special taste, ingredients and ways of making. The food changes from one region and place to another based

on the climate, culture and availability of local products. You may have seen that Northern India is famous for wheat-based foods like roti and stuffed breads, while Southern India is known for rice-based dishes like steamed cakes and crispy pancakes. However, people from different parts of the country enjoy all these types of food with the same excitement.



A few examples of cereals and pulses from different regions of India

Go Further

Khichdi, a modest preparation of grains and pulses, is frequently regarded as a soothing meal that embodies the spirit of Indian gastronomy.

In spite of the variety in meals, there exist numerous basic foods that bring the nation together. Grains such as rice, wheat and barley; coarse cereals like sorghum, pearl millet and finger millet; legumes and pulses; and seasonings like turmeric, pepper, cumin and ginger are employed in nearly every part of the land. These shared elements foster a feeling of harmony within the diversity of cuisines. You may have noticed in your households how a single component (oneness) can be utilized to craft multiple preparations (variety). For instance, the widely used vegetable potatoes serve as a base in countless items such as fritters, stuffed flatbreads, pancakes, flattened-rice dishes, stews, cutlets, and more.

Analyze Thoughts

Just as with the potato, reflect on another plant or cereal that serves as the foundation for multiple food items. List a few creations as well that can be cooked using that vegetable or grain.

In the same way, the tradition of the "thali" in Indian society illustrates the principle of unity in diversity. A "thali" is a broad tray holding an assortment of foods. It offers contrasting tastes—sweet, sour, tangy, piquant—just like the multifaceted communities of India co-existing.

India also values the practice of distributing meals and delicacies among relatives, companions and neighbours during festivities and significant occasions. This sharing of flavours builds cherished connections among people and strengthens the spirit of unity in diversity.

A thali with a variety of dishes

In-Text Questions

State True or False :

1. India is a nation of variations.
2. Variety enhances our existence.
3. Citizens throughout India converse in a single tongue.
4. Variety obstructs financial progress.
5. There are 22 formally acknowledged tongues in India.

TEXTILES AND CLOTHING

Along with food, Indian clothes and fabrics also show the idea of unity in diversity. Different parts of India are famous for their special designs, colours, patterns and clothing styles influenced by climate and old traditions. Yet, these different fabrics are worn proudly by people all over the country and represent unity among cultural differences. The Banarasi silk sarees, Pashmina from Kashmir, Bandhani of Gujarat, Kanjeevaram from Tamil Nadu and Kantha embroidery of Bengal and Northeast India are loved and respected by Indians everywhere.

Some clothes like the saree, salwar-kameez, kurta-pyjama and headgear are common Indian dresses worn across the country, but their designs and styles may be different. They are mostly worn during festivals, weddings and other special occasions. Various regions accept and share each other's clothing traditions, and this exchange helps build unity and respect among all people.

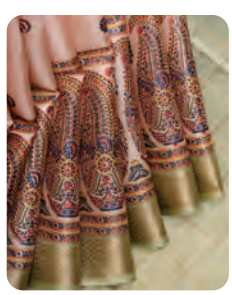
Banarasi saree

Kanjeevaram saree

Bandhani saree

Patola saree

Chanderi saree



Tussar silk saree

The saree is a great example of unity in diversity in India. It is a symbol of cultural heritage that connects women from all parts of the country. This dress is a common traditional wear for Indian women, loved during festivals, weddings and special events. Sarees are found in many styles, including the famous Banarasi weave from Uttar Pradesh, Kanjeevaram from Tamil Nadu, Bandhani from Gujarat and Rajasthan, Patola from Gujarat, Tant from West Bengal, Chanderi from Madhya Pradesh, Tussar silk from Bihar, Muga silk from Assam, Pochampally from Telangana, Paithani from Maharashtra, and Kasavu from Kerala as well today.

Tant saree

Pochampally saree

Sarees are also made with different materials like silk, cotton and synthetic fibres, and each has many colours and designs. Each type of saree has its own special weaving styles, fabric quality, patterns, wearing methods and cultural value. They show the regional diversity of India, but the way women across the country accept and wear this garment has made the saree a symbol of Indian identity and a true example of unity in diversity for all people everywhere today.

The saree is worn in many different ways. Each style of wearing it shows India's rich cultural heritage and creative skills. The common styles include the Nivi drape (Andhra Pradesh and Telangana), Bengali drape (West Bengal), Gujarati drape (Gujarat), Nauvari drape (Maharashtra), Coorgi drape (Karnataka), Madisar drape (Tamil Nadu) and Sambalpuri drape (Odisha). Even today, many new ways of wearing sarees are being created because Indian women continue to love this traditional dress.

Nivi Style (Andhra Pradesh and Telangana)

Bengali Style (West Bengal)

Gujarati Style (Gujarat)

Nauvari Style (Maharashtra)

Different draping styles of saree

In village areas, women often wear the saree in a shorter style, which helps them do farming work, household tasks or carry heavy loads easily. They also use the saree's pallu as a cover to protect themselves or their small children from sunlight, dust or as a warm wrap during cold weather.

Different uses of saree

You may be surprised to know that the history of the saree goes back to the Indus–Saraswati Civilization. Discoveries at Mohenjo-Daro and Harappa found small clay statues of women wearing cloth wrapped around the waist and placed over the shoulder, similar to today's saree. The Rig Veda, one of the oldest holy books in the world, mentions clothing like the modern saree. During the Vedic period, women wore a single piece of cloth that slowly changed into the saree. This dress was called Poshak and was worn with a cloth belt tied around the waist, known as 'Mekhala'.

Over time, sarees became more beautiful, featuring rich borders and designs, and women began wearing them in different folds and styles.

Along with being a clear example of unity in diversity, the saree also represents national pride.

Wearing a saree is more than just a fashion choice; it shows respect for elders and family traditions. Although many types of clothes are available today, the saree remains a strong symbol of Indian culture and heritage.

Go Further

The term *saree* originates from the Sanskrit word *Satika*, which is taken from the three-part attire called *Poshak*. The *Poshak* consists of the *Antariya* (lower cloth), *Uttariya* (covering worn across the shoulder), and *Stanapatta* (breast band).

Cloth wrapped around the waist of a terracotta figurine

Analyze Thoughts

If you were given an opportunity to put on a saree, which material and wrapping style would you prefer.

Do you know?

Figures such as Indira Gandhi encouraged the use of handwoven sarees to foster self-sufficiency, and strengthen the Indian cloth sector.

In-Text Questions

Identify the regions associated with the following sarees:

1. Kanjeevaram saree 2. Banarasi saree 3. Chanderi saree 4. Tant saree 5. Patola saree

FESTIVALS GALORE

Like the variety in food, clothes, customs, culture, languages and more, the many festivals celebrated in India also show a colourful picture of diversity. Festivals like Diwali, Durga Puja, Holi, Eid-ul-Fitr and Christmas are celebrated across India. These festivals bring people together and strengthen the feelings of peace and unity despite differences in region, language or religion.

Makar Sankranti

Dandiya in Gujarat

Festivals like Diwali, Makar Sankranti and Navratri are good examples of unity in diversity because they are celebrated across India with different regional customs. In Northern India, Diwali is celebrated to remember Lord Rama's return to Ayodhya after fourteen years, while in Southern India it is observed as Naraka Chaturdashi. In Eastern India, Diwali is linked with the worship of Goddess Kali.

Different names of similar festivals across India around the same date

Makar Sankranti, celebrated in northern India as a harvest festival, shows the movement of the sun into the Capricorn zodiac sign. It is celebrated around 14 January in different parts of India with different names like Pongal in Tamil Nadu, Magh Bihu in Assam and Khichdi Parv in Uttar Pradesh. Similarly, Navratri is celebrated as Durga Puja in Bengal, Dussehra in northern India and Garba with Dandiya in Gujarat.

National celebrations like Republic

Analyze Thoughts

Prepare a list of the festivities observed in your locality. Compose a short description of the manner in which they are observed and how they encourage harmony in variety.

Day and Independence Day bring the whole country together, as they are celebrated with great pride by all citizens of the nation.

Republic Day

AN EPIC SPREAD

Indian writings also show unity in diversity. The literary tradition of India clearly represents the great variety of languages and cultures along with the sameness of thoughts, morals and values.

India has 22 officially recognized languages and many different dialects. Every language has its own literary tradition that shows the culture, history and social life of different regions. However, this diverse collection of writings has common themes, stories and symbols. Together, they teach shared moral and social values, equality, love and devotion. Many literary works have been translated into different languages, encouraging cultural exchange and increasing our understanding of the beliefs and traditions of other regions and communities.

'Pancha Pandavar', a carved stone in a forest of the Nilgiris, Tamil Nadu, depicting the five Pandava brothers. The shrine containing this stone is maintained by Irula tribals to commemorate the Pandavas' passing through the area.

The writings of Kabir, Guru Nanak, Tulsidas, Amir Khusro and others have been translated into many languages and they teach love, respect, unity and peace among people. The Panchatantra is an old Indian collection of animal stories and moral lessons. It was written in Sanskrit by Vishnu Sharma. Each story in the Panchatantra shows human qualities like honesty, greed, wisdom, friendship and more, while teaching good values to readers. These stories are so interesting that the Panchatantra has been translated and changed into many forms around the world. It has reached Persian, Arabic, Latin and European languages. Many books and stories have been created from the Panchatantra. It is said that more than 200 versions of the Panchatantra are found in over 50 languages. Therefore, one text (unity) with many versions (diversity) clearly shows the main idea of this chapter: harmony within diversity in India.

India's two great epics—the Ramayana and the Mahabharata—show the country's traditions and different cultures, giving a wonderful example of unity in diversity. Written by Valmiki, the Ramayana has many versions like the Ramcharitmanas by Tulsidas in Awadhi, the Kamba

"Indrajit meets with Ravana, then binds Rama and Laksmana with magic serpents; Sita is told they are dead," folio from the Yuddha Kanda of the Ramayana, by Sahib Din, Udaipur, 1650-52,

Ramayanam in Tamil and the Ramakien in Thai. It has also been translated into many other Indian languages. Similarly, the Mahabharata, written by Ved Vyasa, has many regional versions like the Bharatam in Tamil and the Mahabharata in Telugu. Different folk groups like the Gonds, Mundas and Bhils have their own versions of both epics, showing their local beliefs, values and traditions. Many tribes of the Northeast and Himalayan regions, including Kashmir, have shared their versions of the Ramayana and Mahabharata orally with future generations. Their stories also tell how characters from these epics travelled to the places where these tribes live today. The translations and adaptations of these epics make them available to people in different regions, helping cultural exchange and communication among communities. Both epics have also been presented, performed and respected through many art forms like poetry, theatre, music, painting and sculpture.

Go Further

The Story of Mahabharata

Draupadi Cheer-Haran

Pandu reigned as the ruler of Hastinapur. He fathered five sons—Yudhishthira, Bhima, Arjuna, Nakula and Sahadeva—who were collectively known as the Pandavas.

Upon Pandu's death, his sightless brother Dhritarashtra assumed the throne. He fathered a hundred sons, with Duryodhana as the firstborn among them. They were collectively identified as the Kauravas.

Dhritarashtra divided the kingdom by giving Hastinapur to his sons and the Khandava forest to his nephews.

The Pandavas made their capital at Indraprastha. Duryodhana was very jealous of the Pandavas. The Kauravas invited the Pandavas to a game of dice and defeated them by tricks. The Pandavas lost everything in the game including their kingdom, wealth and even their wife, Draupadi. They had to go on a 13 year exile. On their return, they demanded their kingdom back but the Kauravas refused. This resulted in a fierce 18 days of the Mahabharata War'.

Besides the tale of conflict, the Mahabharata also encompasses the Bhagavad Gita. This comprises the discourses delivered by Lord Krishna to Arjuna on the battleground.

Gita Updesh by Lord Krishna to Arjuna

Go Further

The Story of Ramayana

Rama was the firstborn son of Monarch Dasharatha, who governed the realm of Kosala (Awadh). Ayodhya served as the capital city of Kosala.

Lord Rama seated with his wife Devi Sita

Dasharatha had three consorts. To honour a vow given to his second consort, Kaikeyi, Dasharatha sent Rama into banishment for fourteen years. Rama's spouse, Sita, and his brother, Lakshmana, accompanied him. During this banishment, Sita was seized by Ravana, the sovereign of Lanka. Rama was compelled to wage a war against Ravana to reclaim his wife.He emerged victorious in that intense conflict and rescued Sita. After completing fourteen years of exile, they returned to Ayodhya. The citizens of Ayodhya rejoiced at their homecoming by kindling clay lamps.

Rama (right) seated on the shoulders of Hanuman, battles the demon-king Ravana.

Even today, Hindus observe Diwali in remembrance of their homecoming. Rama ascended as the monarch of Kosala and founded a perfect realm grounded in fairness and righteousness. This is referred to as *Ramarajya*.

Analyze Thoughts

Which figure from the *Ramayana* or *Mahabharata* do you admire the most and for what reasons? Provide explanations to support your response.

Although there are differences in stories, characters and versions, both epics are famous for teaching moral values like duty, love, truth, justice, kindness, respect for elders and the victory of good over evil. India's unity in diversity can be seen in many forms such as art, music, painting, architecture and sculpture. It is present in the heart of the nation and we experience it in many ways in our everyday lives. While diversity brings creativity, acceptance and respect for each other's customs and traditions, it is the hidden unity that creates cooperation and peace among the people.

Do you know?

Plurality has likewise been a foundation of resilience for India. Throughout the struggle for independence, men and women from varied linguistic, cultural, spiritual and regional origins

united to resist British imperial domination. The British assumed they could fragment the Indians due to their differences and govern them.

The citizens of India demonstrated to the British that they could remain different yet still unite in times of necessity. Individuals from all walks of life strategized together, laboured together and endured imprisonment together during the National Struggle for Independence. Verses, melodies, dramas and emblems acted as constant reminders of our nation's rich heritage of honouring plurality. For instance, the Indian tricolour was employed as a sign of resistance against British authority by people across the entire land. The following hymn was sung after the Jallianwala Bagh tragedy in Amritsar, where a vast number of defenseless and innocent people were slain by the British.

Jallianwala Bagh Massacre

Don't forget the days of blood, O friend
In the midst of your happiness remember to shed a tear for us
The hunter has torn away every single flower
Do plant a flower in the desert garden dear friend
Having fallen to bullets we slept in Jallianwala Bagh
Do light a lamp on this lonely grave, O friend
The blood of Hindus and Muslims flows together today
Do soak your robe in this river of blood dear friend
Some rot in jails while others lie in their graves
Do shed a few tears for them O friend.

Source: Indian People's Theatre Association (IPTA)

Countless men and women—Hindus, Sikhs and Muslims, both wealthy and humble—assembled and chanted this hymn to resist the tyrannical imperial regime. This stood as one of the most powerful illustrations of India's "Oneness in Plurality."

In-Text Questions

State True or False :

1. In Northern India, Diwali is observed to commemorate the homecoming of Lord Rama to Ayodhya after fourteen years.
2. Pongal is observed in the state of Tamil Nadu.
3. Republic Day is regarded as a national celebration.
4. The Panchatantra was authored in the Awadhi language.
5. The Ramayana and the Mahabharata have never been rendered into any other tongues.

IMPORTANT TERMS

- **Intercultural Sharing:** Exchange of cultural practices mutually
- **Enhancement:** Improvement of quality or value
- **Variety:** Different forms or types
- **Acceptance:** Willingness to acknowledge differences
- **Efficiency:** Speed and effectiveness of work
- **Delegation:** Acting on someone's behalf
- **Compassion:** Understanding and sharing feelings
- **Cultural Group:** People sharing common traditions
- **Regional Speech:** Language unique to region
- **Taste:** Flavour sensed in food
- **Traditional Lore:** Community stories and beliefs
- **Social Study:** Examination of human society
- **Basic Food:** Essential dietary items
- **Fabrics:** Woven or knitted materials
- **Serving Dish:** Plate or bowl used
- **Miniature Statues:** Small carved or moulded figures
- **Decorative:** Ornamented with artistic design
- **Modification:** Change made for adaptation
- **Pattern:** Repeated decorative design element
- **Carving Art:** Craft of shaping materials

QUICK TAKE

- The nation spans snowy mountains, deserts, lush plains and dense tropical forests.
- Over 1.4 billion people speak 22 official languages and countless local dialects.
- Diversity strengthens society through exchange, better governance, business growth, empathy and peaceful co-existence.
- India celebrates variety in beliefs, culture, speech, cuisine, clothing, and landscapes.
- Food differs by area but often includes grains, beans, herbs, and aromatic seasonings.
- Regions are known for fabrics, yet traditional attire like sarees, kurta-pajamas and turbans remain common.
- The People of India project recorded more than 4,600 unique communities.
- A thali combines multiple flavours on a single plate, showing harmony through variety.
- These timeless stories unite the country, connecting people across different regions and traditions.
- National days such as Independence and Republic Day celebrate shared pride and identity.
- The Ramayana and the Mahabharata appear in many local versions, teaching honesty, love, courage and justice.
- These stories connect people, promoting morals of kindness, courage and fairness across regions.
- Festivals like Diwali, Holi, Eid, Christmas and Makar Sankranti unite communities uniquely.
- Classic tales like the Ramayana and the Mahabharata appear many in local versions, teaching life lessons such as honesty, love, courage and justice.

I. OBJECTIVE TYPE QUESTIONS

A. Choose the correct answer.

1. Who coined the phrase "Unity in Diversity" to describe India?
   (a) Jawaharlal Nehru ☐ (b) Mahatma Gandhi ☐
   (c) Rabindranath Tagore ☐ (d) Sardar Vallabhbhai Patel ☐
2. Which food item shows unity in Indian food culture?
   (a) Chapati ☐ (b) Thali ☐ (c) Rice ☐ (d) Idli ☐
3. The saree is a symbol of unity because it is worn
   (a) Only in Southern parts of India ☐
   (b) Only by village women ☐
   (c) By women across India in different styles ☐
   (d) As a modern dress in cities ☐
4. Which statement is true about Indian festivals?
   (a) Diwali only in North India ☐ (b) Makar Sankranti has regional forms ☐
   (c) Holi only in Gujarat ☐ (d) Eid only in South India ☐
5. What is the main idea of both the Ramayana and the Mahabharata?
   (a) Economic growth ☐ (b) Cultural diversity ☐
   (c) Moral duty and justice ☐ (d) Scientific progress ☐

B. Fill in the blanks.

1. India has ..... officially recognized languages.
2. The Ramcharitmanas was written by ..... in the Awadhi language.
3. The saree is believed to have started from the ..... Civilization.
4. Festivals like ..... in Tamil Nadu and ..... in Assam are regional names for Makar Sankranti.
5. The famous Bandhani sarees come from the state of ..... .

C. Write 'T' for True or 'F' for False.

1. The saree is worn only in the Northern parts of India. ☐
2. The *Ramayana* has only one version, written by Valmiki. ☐
3. The *Panchatantra* is a collection of moral stories that started in Australia. ☐
4. Festivals like Diwali, Makar Sankranti and Navratri are celebrated with different regional customs across India. ☐
5. Banarasi silk sarees are famous in Tamil Nadu. ☐

D. Choose the option that correctly matches items from Column A and B.

Column A	Column B
1. Panchatantra	(i) Valmiki
2. Mahabharata	(ii) Moral Stories
3. Ramayana	(iii) Jawaharlal Nehru
4. Unity in Diversity Phrase	(iv) Ved Vyasa

(a) 1.-(iii), 2.-(i), 3.-(ii), 4.-(iv)
(b) 1.-(ii), 2.-(iv), 3.-(i), 4.-(iii)
(c) 1.-(i), 2.-(ii), 3.-(iii), 4.-(iv)
(d) 1.-(iii), 2.-(i), 3.-(iv), 4.-(ii)

E. Assertion-Reason

For question numbers 1 to 4, two statements are provided—one marked Assertion (A) and the other marked Reason (R). Choose the correct option from the codes (a), (b), (c) and (d) as given below:

1. **Assertion (A)** : The Panchatantra has been translated into many languages around the world.
   Reason (R) : It has stories that show human qualities and teach moral lessons liked by people everywhere.
2. **Assertion (A)** : The saree is considered a symbol of national pride in India.
   Reason (R) : It is worn only by women in rural areas of India.
3. **Assertion (A)** : The phrase "Unity in Diversity" was introduced by Jawaharlal Nehru.
   Reason (R) : India has only 10 officially recognized languages and one cultural tradition.
4. **Assertion (A)** : Festivals in India like Diwali and Makar Sankranti are celebrated with regional differences.
   Reason (R) : India's climate affects the way festivals are celebrated in different regions.

(a) Both Assertion (A) and Reason (R) are correct and Reason is the proper clarification of the Assertion.
(b) Both Assertion (A) and Reason (R) are correct but Reason is not the proper clarification of the Assertion.
(c) Assertion (A) is correct but Reason (R) is incorrect.
(d) Assertion (A) is incorrect but Reason (R) is correct.

II. SHORT ANSWER TYPE QUESTIONS

1. Explain the meaning of the phrase "Unity in Diversity" in the Indian context.
2. Describe the importance of Indian festivals in promoting the feeling of unity in diversity.
3. In what way does customary Indian attire demonstrate harmony in multiplicity?
4. Write a note on how Indian food represents the idea of unity in diversity.

III. LONG ANSWER TYPE QUESTIONS

1. Explain how Indian traditions promote "Unity in Diversity" through food, festivals and clothing.
2. Describe how the Ramayana and the Mahabharata show the idea of Unity in Diversity in India.

IV. SOURCE BASED QUESTIONS

Read the passage below and respond to the following questions.

India is a country of diversity, where geography, languages, food and clothes shape its culture. From the Himalayas to the coastal areas, people follow different traditions but remain united. Basic foods like rice and wheat, and clothes like sarees, bring communities together. Nehru's idea of "unity in diversity" explains how differences make people stronger and more connected. The thali, with its variety of tastes, and fabrics like Banarasi silk and Kanjeevaram, represent harmony among differences. India's ability to accept many identities while maintaining unity makes it a wonderful example of cultural togetherness.

1. How does the idea of "unity in diversity" make India stronger?
   (a) Ignore differences ☐ (b) Celebrate togetherness ☐
   (c) Enforce tradition ☐ (d) Limit practices ☐
2. Why is the saree seen as a symbol of unity in diversity? ☐
   (a) One region ☐ (b) Same designs ☐
   (c) Connects women ☐ (d) Religious use ☐
3. What can we learn from the tradition of the "thali"? ☐
   (a) Harmonious variety ☐ (b) One flavour ☐
   (c) Unchanged traditions ☐ (d) Discourage sharing ☐
4. Why is India called "multifaceted"? ☐
   (a) One culture ☐ (b) Diverse aspects ☐
   (c) Same customs ☐ (d) Imposed unity ☐

V. PICTURE STUDY

Look at the picture of the Indian thali and answer the following questions:

1. Name any two food items shown in the thali.
2. Which grain is usually used to make roti?
3. How does a thali represent the idea of "unity in diversity"?
4. Why do people share food during festivals in India?

ACTIVITIES & PROJECTS

Divide the class into four groups. Each group will represent one state or region by preparing a short presentation using costumes, songs or folk stories. Together, the class will create a "Mini-India" fair to show unity in diversity.

THEME–D

Governance and Democracy

Every society works with certain rules, responsibilities, and systems that help people live together peacefully. From our homes and neighbourhoods to larger communities, cooperation and participation play an important role in making decisions and solving problems. People come together to share ideas, choose representatives, and contribute towards the well-being of everyone. Understanding how decisions are made, how public services are provided, and how citizens can take part in improving their surroundings help us become responsible members of society. This journey introduces us to the ways people work together, support each other, and build a fair and organised society through active participation and shared responsibilities.

9 Family and Community

Let's Learn About

- Chief Features of a Family
- Community
- Roles and Responsibilities of a family
- Roles and Responsibilities of a Community

Let's Gear Up

You surely know the word community. What do you think of when you hear it? You may think of neighbours, friends, teachers and helpers who live and work near you. A community is like a big family where people share happiness, solve problems and celebrate together. Just as a family teaches us values at home, a community teaches us teamwork, respect and kindness outside. It plays an important role in building our identity and helping us become responsible citizens. When families and communities work together, they create peace and strength that make life valuable for everyone.

FAMILY

A family is a long-lasting and important social group made up of people related through birth, marriage or care. A family is the first group we become part of when we are born. Family members live together and share emotional, financial and social responsibilities.

CHIEF FEATURES OF A FAMILY

- **Collective Group:** A family is a small group of people who are closely related, live together in one home and share responsibilities.

- **Emotional Care:** Family members give each other emotional support. They care for one another and share love and friendship.
- **Financial Support:** The elders of the family, such as parents and grandparents, manage money matters and provide basic needs like food, shelter, clothes, education and other necessities for family members.
- **Divided Duties:** Family members share duties with each other, such as doing household work, taking care of elders or children and making decisions together.
- **Passing on Traditions and Principles:** A family passes its traditions, values, beliefs, customs and practices from one generation to another.
- **Social Training:** A family teaches its members good behaviour, morals and values. It prepares children for bigger responsibilities and roles in society.

Types of Family

- **Joint Family (Extended household):** In this type of family, many generations live together in the same house, including grandparents, parents, children and sometimes uncles, aunts and cousins. All members share duties and resources with each other and build a strong support system for everyone.

A Joint Family

- **Nuclear Family (Immediate household):** This type of family is more common in big cities and includes only parents and their children living together.
- **Single-Parent Family:** In this type of family, children are raised by one parent alone, either the mother or the father.

A Nuclear Family

A Single Parent Family

Analyze Thoughts

Which kind of household do you belong to?

Do you know?

There are several relatives in your household whom you address with titles such as Dada, Dadi, Nana, Nani, Mama, Mami, Tau, Tai, Bua, Chachi and so on. These are all Hindi terms for various relationships. Many similar titles exist in other Indian tongues as well. Interestingly, there is no exact expression in Indian languages for the English word "cousin", since in India, cousins are considered brothers and sisters.

ROLES AND RESPONSIBILITIES

Let us begin with a brief tale about how various household members assist and care for one another.

Aditi resided with her family in Mumbai. There were six individuals in her household—her grandparents, parents and her younger sibling. It was her grandmother's 75th birthday and the household chose to mark the occasion by arranging a grand meal at home and welcoming some of her grandmother's companions.

Since a great deal of preparation was required for the celebration, all the household members gathered and agreed to divide the duties so that the event could proceed without difficulty. Aditi's father, Ravi, assumed the responsibility of purchasing the ingredients for the meals and sweets to be cooked, along with decorative materials and return presents for the visitors. Aditi's mother, Veena, undertook the task of cooking the main courses, which also included Grandma's beloved recipes. She chose to seek Aditi's assistance in chopping vegetables and arranging the dining table.

Sharing and caring in the family

Aditi enjoyed baking and decided to bake her grandmother's cherished pineapple cake. She drafted a list of the items needed for the cake and its topping and passed it on to her father. Her younger brother, Anant, assumed the responsibility of decorating the house and main hall with balloons, ribbons and other decorations. He sought the assistance of his grandfather in inflating the balloons and fastening the ribbons.

By late afternoon, with the co-operation and support of all the members of the household, the

home was beautifully adorned, the cake was prepared and all the meals were ready on schedule. The celebration continued into the night and the visitors admired the household for their united efforts. Grandmother was delighted and deeply touched to witness the arrangements as well as to meet her old companions on her special occasion.

Veena, in particular, expressed gratitude to the children for their assistance and guidance, teaching them the value of collaboration and unity within a household that makes even challenging tasks manageable.

From this example, you must have understood that sharing duties and tasks is very important in a family because it helps everything run smoothly. You are surely helping your family members in some way. Family members depend on one another for their everyday needs. Help and teamwork among relatives build feelings of love, understanding, respect and care. Cooperation means working together. Every family member helps in household work in different ways according to their skills, age and abilities.

Usually, parents have the responsibility of handling family money, looking after elderly family members, raising children in a healthy environment, providing basic needs like good health and education and preparing them to become responsible members of society. Parents also teach their children moral values, good habits, family traditions and cultural practices. A family is the first place where children learn, and parents are their first teachers and guides. In the family, children learn values like kindness, gratitude, empathy, honesty, care, truthfulness, responsibility, hard work and helpfulness.

Children also take part in responsibilities as they grow up. They help with household tasks like cleaning, dusting, setting the table, watering plants and looking after younger brothers and sisters. By doing small tasks, they get ready for bigger responsibilities in society later. As they become older, they slowly take on more duties and some even help their families financially.

The older members of a family, such as grandparents, also have important roles at home. They guide the family during important situations and difficult times through their knowledge and life experiences. They also teach children important values and family traditions through daily activities and stories. Elders take care of younger family members and help with simple household tasks.

Analyze Thoughts

In which varied manners do you and your siblings assist your parents with domestic tasks? Consider additional methods as well through which you can support them in managing your home efficiently.

In-Text Questions

A. State whether True or False.

1. A family unit is our first social circle into which we arrive at birth.
2. A nuclear household consists of grandparents and cousins living together.
3. We gain moral lessons only in schools and not within our home environment.
4. A family unit also provides emotional support.
5. A family unit equips children for greater duties and community roles.

B. Prepare your family tree.

C. Complete the table by writing the name of the relative in your household who carries out the duty listed in the box.

Task	Name of the family member and your relation with him/her
Cooks food	
Cleans utensils	
Looks after the garden	
Brings vegetables from the market	
Helps you with homework	
Goes to the office	

COMMUNITY

A community is a group of people who share the same area, religion, interests, values or goals. A community can also be called a group of families who live together, help each other and work together.

Chief features of a Community

- **Common Interests:** People in a community share similar interests, goals and experiences. These may come from the same place, work, culture, hobby or religion.
- **Feeling of Belonging:** As community members have common interests, they feel connected with each other and feel safe together. They develop a sense of belonging and a shared identity.
- **Reciprocal Assistance:** People in a community support each other during difficult times. This help can be emotional, financial or social. They share their resources, which makes their bonds and relationships stronger.
- **Shared Principles:** Members of a community often share similar beliefs, habits, traditions and customs. These common values guide their behaviour and relationships.
- **Social Exchange:** Community members meet and communicate often, either through gatherings, letters or online platforms. These meetings are arranged for a common goal, such as completing a project or working for the benefit of the group.
- **Collective Duties:** Community members have different roles and responsibilities that help the group work smoothly. They make decisions together while solving common problems or planning activities for everyone's benefit.

Village

- **Territorial Limits:** Old communities had fixed boundaries such as a neighbourhood or town. Modern communities are mostly connected through technology like social media groups and online networks.

Types of Community

- **Territorial community:** A community where people live in the same physical area, such as villages, towns or countries.
- **Heritage community:** A community where people have the same culture, traditions, customs and practices, like Native Americans or German-Americans.
- **Faith-based community:** A community made up of people who follow the same religion and beliefs, such as Hindu society or Buddhist community.
- **Digital community:** A community where people connect online from different places, such as social media groups like Facebook and online discussion forums.
- **Planned community:** A planned community where people live together to follow a common purpose and share responsibilities, such as co-operatives, co-housing groups resident welfare associations.
- **Hobby-oriented community:** A community where people share similar interests or hobbies, such as sports clubs, music group or dance groups.

Besides these, there are many other types of communities like business communities, farming communities, trade communities, political communities, educational communities and more. Communities depend on each other. This means they need one another for resources, support and proper management of their activities. For example, village communities depend on cities for markets and selling their handmade products, while city communities depend on villages for food and raw materials.

Analyze Thoughts

Are you or any relative in your household associated with any community? State the name of that community and describe its aim and activities.

Do you know?

The Toda society dwells in the Nilgiri ranges of Tamil Nadu, India. One of the most remarkable features of Toda tradition is their customary building style, especially their arched huts known as "dogles." These shelters are built without the use of nails or metallic fastenings. They are bound together solely with bamboo, straw, and detailed weaving methods. The huts are half-circular in design to resist the strong winds and heavy rains of the Nilgiri ranges.

ROLES AND RESPONSIBILITIES

Let us start by seeing some real examples to understand how communities work for welfare activities in India.

SEWA (Self-Employed Women's Association)—Gujarat

Started in 1972 by Ela Bhatt, SEWA is an organization of poor, self-employed women workers. Its aim is to improve the working conditions of women working in unorganized sectors.

SEWA SELP EMPLOYED WOMEN'S ASSOCIATION

Women at SEWA meet

Such as street sellers, home-based workers and farm labourers. It also provides childcare, health services and shelter facilities to its members. Through SEWA, many women have gained education, become financially secure and are also running co-operative businesses.

Chipko Movement-Uttarakhand

Chipko Movement -Uttrakhand

This movement started in the 1970s in Uttarakhand to stop contractors from cutting trees. Local people, especially women, hugged the trees to prevent them from being cut down. The movement was led by village communities to protect forests, which supported their livelihood. The campaign teaches the careful use of forest resources and shows the importance of people working together for conservation.

Chipko Movement

The Van Dhan Vikas Yojana for tribal communities

A training programme under the Van Dhan Vikas Yojana

This programme was started in 2018 with the aims to improve the living conditions and income of tribal communities by encouraging the sale of forest products. For this, Van Dhan Kendras have been created where tribal self-help groups receive training in safe collection, better quality checking and selling of forest produce. The scheme achieves many goals like using local resources, protecting nature and improving the economic condition of tribal communities.

Van Dhan Vikas Yojana

Kerala Floods 2018 - Fishermen's Rescue Operations

The boatmen from coastal communities played an important role in rescue work during the terrible floods in Kerala in 2018. These boatmen moved through flooded areas with their boats and saved many trapped people. They were praised as real heroes by the government and the public for their selfless help and local knowledge of water currents and boat navigation, which saved many lives.

Kerala Floods 2018

Flood alert

Gujarat Earthquake 2001 - Kutch Community-Led Rehabilitation

After the severe earthquake of 2001, the people of Kutch came together and helped each other rebuild their homes and lives. New earthquake-safe houses were built with the support of NGOs, local workers and traders. Local groups also provided emotional support by giving counselling to the people affected by the disaster.

Gujarat Earthquake 2001

Earthquake warning system symbol

Community Efforts

From the examples given above, it is clear that communities play an important role in improving the economy, protecting nature and handling natural disasters by providing aid, rebuilding and emotional support. Often, local communities are the first to respond during emergencies before any outside help arrives.

Some important efforts made by communities in different areas are explained below:

- In many rural areas, communities often come together to manage and protect water resources and start projects like rainwater harvesting, watershed management and building water storage tanks.

- Communities also play an important role in protecting and wisely using forest resources. This has led to more trees, restoration of many damaged forests and better income opportunities for local people.

- Communities also arrange health camps, awareness activities and teaching sessions to address different health issues and support wellness. This has helped improve the health of mothers and children, stop diseases and increase the overall well-being of communities.
- Communities also care for the learning needs of their members. They build schools, libraries and organise learning programmes to help people understand the importance of education and provide good-quality teaching to children and adults. These efforts have increased school enrolment, reduced student dropouts and improved the learning achievements of students.

- Communities also organise cleanliness drives to promote a clean and safe environment. They build and maintain sanitation facilities, which has reduced water-related diseases and improved the living conditions of community members.

- Communities also run farming programmes where they encourage environment-friendly farming methods like natural farming, pest control and proper use of resources, improving the living conditions and income of farmers.
- Sometimes, communities also start disaster management programmes that help them prepare for and handle natural disasters like floods, earthquakes, storms and more. These efforts have saved many lives, as shown in the examples above. They also reduce damage to property and help achieve faster recovery after disasters.

- Neighbourhood groups also provide financial support and loan assistance to small businesses and entrepreneurs. These efforts support new and small

ventures, provide loans even without banks and improve the financial condition of group members. Women often create Self-Help Groups (SHGs), where they come together to save money, lend to each other and take part in common activities.

- Some communities also take part in tourism activities to promote responsible travel, protect cultural and traditional heritage, and create new income opportunities for their members. This has also helped create jobs and increase the income of communities.

Therefore, it is clear that communities solve different social, economic, cultural, agricultural and environmental problems in India. Their efforts and solutions have created positive changes for both their members and the environment.

Analyze Thoughts

Do you know of any community-driven initiative in your locality? If so, then explain and deliberate on its aims and roles in your classroom.

In-Text Questions

Give one example of each of the following.

1. Cultural community
2. Geographical community
3. Affinity-based community
4. Online community
5. Passion-based community

IMPORTANT TERMS

- **Essential:** Absolutely necessary, very important
- **Mutually reliant:** Depending on each other equally
- **Cohort:** A group born around the same time
- **Acculturation:** Learning societal norms and values
- **Obligations:** Duties one must perform
- **Protection:** Keeping something safe and secure
- **Enduring:** Lasting without losing strength
- **Sympathy:** Feeling concern for others
- **Deliberate:** Done with clear intention
- **Topographical:** Related to the land's physical features
- **Disaster:** Event causing serious harm
- **Collaboration:** Working together toward a goal
- **Strengthening:** Making stronger and more capable

- **Subsistence:** Means of supporting oneself
- **Safeguard:** Shield from possible harm
- **Mental:** Related to the mind
- **Craftsperson:** A skilled worker who makes items
- **Hygiene:** Practices for maintaining cleanliness and health
- **Legacy:** Cultural or historical inheritance
- **Maintain:** Keep in original condition

QUICK TAKE

- Communities play an important role in emergencies, education, healthcare and protecting the environment.
- Main roles of a family: Gives support, shares duties and decisions, and passes on values, traditions and culture.
- A community is a group of people who live together and share a place, beliefs, interests or goals.
- Types of households: Extended family homes and small nuclear families.
- They solve social, economic and environmental problems by working together.
- Communities depend on one another for resources, support and proper functioning.
- Important features of a community: Shared traditions, common goals, teamwork, regular communication and shared responsibilities.

I. OBJECTIVE TYPE QUESTIONS

A. Choose the correct answer.

1. Which of the following is not a feature of an extended family?
   (a) Sharing responsibilities ☐ (b) Many generations living together ☐
   (c) Living in different places ☐ (d) Strong assistance system ☐
2. What is the main role of a family?
   (a) To provide enjoyment ☐ (b) To teach ethics and support its members ☐
   (c) To start businesses ☐ (d) To build houses ☐
3. Which option best explains social interdependence?
   (a) Communities depend only on themselves ☐
   (b) Communities depend on one another for resources and help ☐
   (c) Communities do not connect ☐
   (d) Communities compete with one another ☐
4. Which of the following was a Community-led environmental initiative in Uttarakhand?
   (a) Chipko Movement ☐ (b) Self-Employed Women's Association ☐
   (c) Kerala Relief Operations ☐ (d) Forest Wealth Development Programme ☐

5. Which type of community is formed by people living in the same area?

(a) Territorial Community ☐ (b) Online Community ☐

(c) Regional Community ☐ (d) Interest-based Community ☐

B. Write 'T' for True or 'F' for False.

1. SEWA is an organization for self-employed men in the organized sector. ☐
2. A family is considered the first social unit that we are born into. ☐
3. Communities do not depend on each other and work separately. ☐
4. A small family includes grandparents, parents and children living together. ☐
5. Joint families are more common in cities than in villages. ☐

C. Choose the option that correctly matches items from Column A and B.

Column A	Column B
1. Chipko Movement	(i) Women workers' trade union
2. SEWA	(ii) Community providing support in natural disasters
3. Van Dhan Vikas Yojana	(iii) Protecting forests in Uttarakhand
4. Kerala Fishermen	(iv) Supporting tribal communities

(a) 1.-(iii), 2.-(i), 3.-(ii), 4.-(iv) (b) 1.-(i), 2.-(iii), 3.-(iv), 4.-(ii)

(c) 1.-(i), 2.-(ii), 3.-(iii), 4.-(iv) (d) 1.-(iii), 2.-(i), 3.-(iv), 4.-(ii)

D. Fill in the blanks.

1. The ..... community played an important role in saving people during the Kerala floods of 2018.
2. A ..... family consists of only parents and children living together in one house.
3. A family is considered the first ..... place, where children learn values like kindness and gratitude.
4. In a ..... family, many generations live together and share responsibilities.
5. Members of a community often share common ..... values and experiences, which create a feeling of belonging.

E. Assertion-Reason

For question numbers 1 to 4, two statements are given—one marked Assertion (A) and the other marked Reason (R). Choose the correct option from the codes (a), (b), (c), and (d) as mentioned below:

1. **Assertion (A):** The Chipko Movement aimed to protect forests in Uttarakhand.

   Reason (R): The movement was mainly led by local women to stop tree cutting.

2. **Assertion (A):** Communities organize cleanliness programmes.

   Reason (R): Communities do not take part in disaster management programmes.

3. **Assertion (A):** A nuclear family consists of parents and their children.

   Reason (R): In a joint family, many generations live together and share responsibilities.

4. **Assertion (A):** Communities depend on each other for resources and support.
Reason (R): Communities work better when they share common beliefs, values and experiences.
(a) Both Assertion (A) and Reason (R) are correct and Reason is the proper justification of the Assertion.
(b) Both Assertion (A) and Reason (R) are correct but Reason is not the proper justification of the Assertion.
(c) Assertion (A) is correct but Reason (R) is incorrect.
(d) Assertion (A) is incorrect but Reason (R) is correct.

II. SHORT ANSWER TYPE QUESTIONS

1. How do communities depend on each other?
2. Explain the responsibilities of senior members in a household.
3. State the main aim of the Chipko Movement.
4. Mention the characteristics of an extended family.

III. LONG ANSWER TYPE QUESTIONS

1. Explain any three important roles of communities.
2. Describe how extended families are different from nuclear families.
3. Explain how a family helps in the overall development of a person.

IV. DISTINGUISH BETWEEN THE FOLLOWING

1. Extended family and Nuclear family
2. Family and Community

V. PICTURE STUDY

1. Look at the picture of fishermen rescuing people with boats. Which natural disaster is shown here?
2. Why were fishermen able to help people during the floods?
3. How did their knowledge of water and boats help save lives?
4. What lesson can we learn from their courage and service?

VI. SOURCE BASED QUESTIONS

Read the passage below and respond to the questions that follow.

Communities play an important role in shaping people's lives by encouraging teamwork, mutual help and shared responsibilities. Through cultural traditions, working together during difficult times and welfare activities, communities help members feel a sense of belonging and safety. From SEWA supporting women workers to the Chipko Movement protecting forests, and from fishermen saving flood victims in Kerala to tribal groups improving their livelihoods through Van Dhan Kendras, these examples show how communities support social welfare, environmental protection and disaster management. These efforts prove that working together and sharing values are important for creating strong and supportive societies.

1. Why is teamwork within a community important during difficult times?
   (a) It helps people compete with each other
   (b) It reduces the need for traditions and culture
   (c) It allows members to share resources and help each other
   (d) It makes sure only leaders receive benefits
2. What lesson do we learn from the Chipko Movement?
   (a) Cutting trees increases employment opportunities
   (b) Only government officers can protect forests
   (c) Protecting nature needs people to work together
   (d) Traditions are more important than nature
3. How do programmes like Van Dhan Kendras help tribal communities?
   (a) By stopping traditional skills
   (b) By forcing them to migrate to cities
   (c) By reducing their role in society
   (d) By helping them earn through forest products

Make a family tree chart, but instead of only adding names, include short stories, values or traditions shared your family members.

10 Grassroots Democracy– Part 1 Governance

Let's Learn About

- Government
- Three Levels of Government
- Three Organs of Government
- Democracy

Let's Gear Up

In the happy village of Sundarpur, everyone believed that problems could be solved when people worked together. One summer, children saw that the village well was drying up, and families had to go far to get water. Instead of waiting for help from others, villagers met under the banyan tree for their weekly meeting. Riya suggested digging a new well, while Ayaan suggested making a rainwater tank. The elders listened carefully and soon every family offered help—some gave money, others shared tools and many gave their time. In a few weeks, the tank was ready and water came again. The children saw how ideas, teamwork and group decisions created real change. They learned that governance is not only about leaders making rules, but also about common people joining, sharing duties and building their community's future. This way of working together locally is called grassroots democracy in the village of Sundarpur.

GOVERNMENT

Like the village in the story, every town, state, country and group needs a system of administration to make decisions and work for everyone's good. Therefore, administration means the ways, plans and organisations that guide, manage and control any community or group of people. A state authority is a group that makes political decisions to run a country. It means the group of people who have the duty of governing a country or a province. It is the executive part of a region or nation. It is the system through which people are governed. The authority shows the purpose of the state.

Imagine a time in your class without a teacher or a school

without a headmaster. There would be confusion and noise everywhere. This shows why we need someone or a system to guide us. In the same way, a government is needed in a country to keep peace and order, help people work together, make common decisions and finish important tasks. The duties and functions of a government are different in different nations. Government is the system through which a country is managed and controlled. In a democratic nation, the government follows the rules given by the Constitution. It helps citizens understand their rights and duties in society.

Functions of a Government

- **Makes Laws for Everyone:** A government creates rules for the country, and the most important rules are called laws. The government makes these laws to protect the rights and needs of all people. Sometimes, the ideas and needs of different groups or communities may be different. In such situations, the government makes collective decisions for everyone by giving guidance. Every person living in a country must follow these decisions or laws.

New Parliament House in Delhi

- **Maintains Law and Order:** The government maintains peace and order in the country. It makes and follows rules to achieve this purpose. If any conflict or illegal activity occurs, the government solves these problems with the help of judges and courts.

Supreme Court of India

- **Provides Basic Facilities :** The government works for the welfare of the people. It provides basic services like education, healthcare, transport and electricity . It builds roads, bridges, schools and hospitals and manage power, postal and railway services. It also controls the prices of goods to help people.

Road repair work

Network of Railways

Supply of Electricity

Construction of Bridges

Banking

Postal Services

Traffic Police

Construction of Schools

- **Action on Social Issues:** The government starts many plans for poor and needy people and puts them into action. It also makes different laws to prevent female foeticide, ensure equal distribution of resources and solve other social problems.

Distribution of Grains

Protection of boundaries

- **Guards the Borders:** The government protects the borders of a country from enemy nations. It also maintains friendly relationships with other countries around the world.

A relief camp

- **Undertakes Relief Measures:** When natural disasters like earthquakes, floods, storms, droughts and other problems occur, the government provides help and support to affected people.

Analyze Thoughts

Has the government given any simple service in your area like classrooms, gardens, health centres and so on? Write a short passage on how you and the people around you have gained from it.

In-Text Questions

State whether True or False.

1. A way of ruling is needed to make choices and act for the common good.
2. A government does not create rules.
3. Education quarrels are settled through judges.
4. Education, medical care and travel are simple services that the government provides.
5. A government has no part in times of natural disasters.

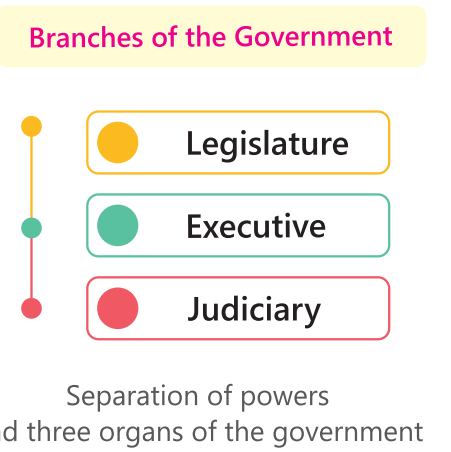
THREE ORGANS OF GOVERNMENT

Let us go back to the story of the little village you read at the beginning of the chapter. After the council was selected, everything worked well for some time. But after a few months, problems returned because the council had mostly older members who were unable to follow and put the council's rules into action. So, the council again called a meeting with all the villagers. This time, they decided to manage village matters through three groups: the first group included wise and skilled villagers who would make rules that everyone had to follow. This group was called the Legislature. The second group included people whose main duty was to apply the rules made by the first group. This group was called the Executive. The third group was given the duty of resolving conflicts and disagreements between the Legislature and the Executive. This group, which gave fair judgments, was called the Judiciary. When the three groups started working for the welfare of the village, life became easier for all villagers. The three groups worked separately but also checked each other to make sure that no group misused the powers given to it. Like the

village, our country also has three parts of government, known as the law-making group, the Executive group and the Judiciary group. These groups help in running the nation properly.

The important duties of these three parts are:

- **Legislature:** It makes or "passes" new laws for the country. Sometimes, it also changes old laws or removes them when they are no longer needed. Making, changing and removing laws is done by a group of elected members. The people in this legislative body represent citizens and make sure that the laws they create reflect the needs and wishes of the people.



Separation of powers
and three organs of the government

- **Executive:** It follows, applies or "puts into practice" the laws made by the legislature. It ensures that the rules, plans and actions created by the government are followed properly so that their benefits reach the common people. The rule-carrying group includes the head of the country like the President, Prime Minister or Chief Minister of a state, along with other government workers and officials.
- **Judiciary:** It interprets laws and ensures that justice is administered fairly. The judicery resolves disputes between people, groups, leaders and citizens. It protects the rights of people and makes sure that no one violates the laws. The judicery also has the power to punish those who do wrong. It reviews the laws made by the legislature and the decisions taken by the executive. It also resolves conflict between the legislature and executive branches.

The Separation of Powers

- Power is shared among different parts of government like the law-making group, executive branches and justice-giving group.
- Different parts of government have equal status but use different powers. They are separate and independent from each other, yet they work together.
- This sharing of powers ensures that no part gets unlimited power and every part keeps a check on the other parts.
- This arrangement also keeps a balance of power among different groups. Therefore, it is called a system of checks and balances. For example, while judges are selected by the executive, they also review the actions of the executive and the laws made by the law-making group.

THREE LEVELS OF GOVERNMENT

Generally, a country has two levels of government: the local level and the central level. In some countries like India, there is also a third level of government called City Corporations in cities and

Village Panchayats in villages. The powers and duties of different levels of government are clearly mentioned in the Constitution.

The three levels of government in India are:

Local Level

The government of a village, city or local area is called local government. This government solves problems faced by local people like providing water, maintaining roads, street lights and more. The Village Council System, District Board, City Committee, City Corporation and Municipal Corporations are examples of local government.

A meeting of Panchayat

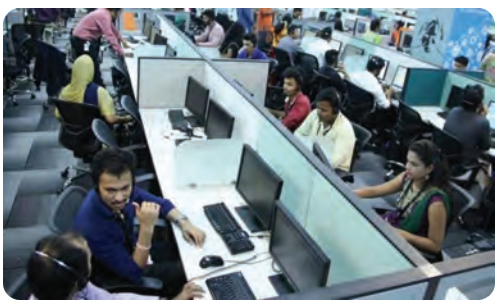
Local government : Municipal Corporation

State Level/Regional Level

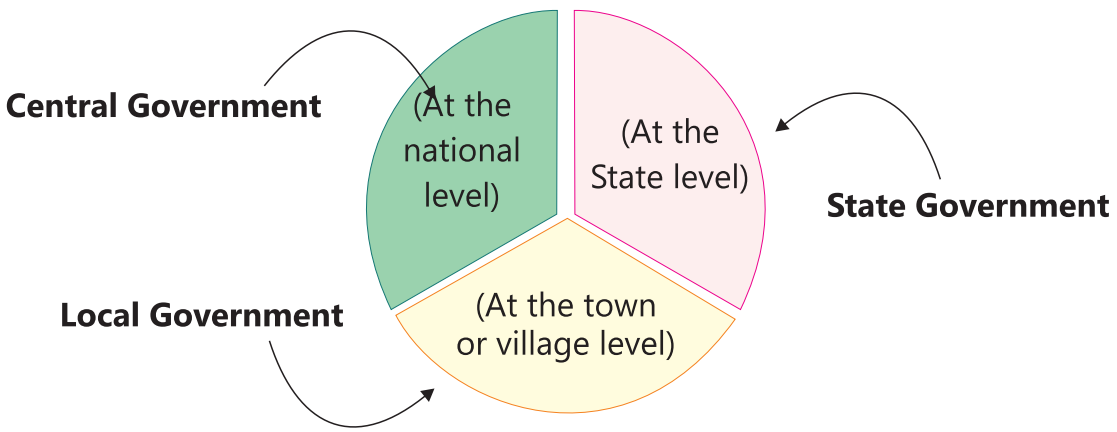
The government at the state level is called the state government. It manages important services for the whole state like education, healthcare and agriculture.The Uttar Pradesh government, Bihar government and other state governments are examples of state governments in India.

National Level/Central Level

The government at the country level is called the national government, central government or Union government. It looks after matters related to the whole country like defence, currency, national security and infrastructure. For example, the Government of India is the government at the country level.



A Central Level office



Given below is a summary of the different organs of government at national and state levels:

1. (a) THE UNION EXECUTIVE

The President

1. The President is the Head of the Nation and the Supreme Commander of The Indian Defence Forces.
2. The Union's executive power belongs to the President of India.

The Vice-President

1. The Vice-President is second to the President of India.
2. When the Vice-President acts as President (during vacancies or when the President is absent), he shall not perform the duties of the Rajya Sabha Chairperson's office.

Prime Minister and Council of Ministers

1. The Prime Minister is the Head of the Government and council of Ministers.
2. He leads his party and is usually the leader of the Lok Sabha.

(b) THE STATE EXECUTIVE

Governor of States

1. Every state will have one Governor.
2. The Governor is the official head of the state.

Chief Ministers and their Council of Ministers

1. The Chief Minister is the real Leader of the State Government.
2. The council of Ministers is jointly answerable to the state Legislative Assembly

2. (a) THE UNION LEGISLATURE (PARLIAMENT) PRESIDENT

The Council of State (Rajya Sabha)

Highest Members – 250 (238 from the states and Union Territories + 12 chosen by the President)

Member at Present- 245 (233 +12)

233 Members are elected by the elected members of the Legislative Assemblies of 28 States and 3 Union Territories (Delhi and Puducherry and Jammu and Kashmir).

12 Members are chosen by the President from persons having special skill or real practice in the field of writing, science, art and social work.

The House of the People (Lok Sabha)

Highest Members – 550 (530 from the states + 20 from the Union Territories

Member at Present- 543 (524+19)

524 Members are directly elected from territorial voting areas of 28 states and 19 Members from 8 Union Territories.

(b) THE STATE LEGISLATURE GOVERNOR

The Legislative Assembly (Vidhan Sabha)

1. The Law-making Assembly of a Province shall have not more than 500 and not less than 60 Members, except Goa (40 seats), Mizoram (40 seats), Puducherry (30 seats) and Sikkim (32 seats).
2. Members are picked by direct voting from territorial voting areas.

The Legislative Council (Vidhan Parishad)

The Law-making Council shall not be more than 1/3rd of the full membership of the Legislative Assembly of the state concerned, subject to a least of 40.

The members are elected as under:

1. 1/3rd of its Members are picked by the Members of the Legislative Assembly (MLAs).
2. 1/3rd are by nominated local bodies.
3. 1/6th are nominated by the Governor.
4. 1/12th are elected by registered teachers.
5. 1/12th are elected by graduates.

The following States have a Legislative Council:

1. Andhra Pradesh
2. Bihar
3. Karnataka
4. Maharashtra
5. Telangana
6. Uttar Pradesh

3. THE JUDICIARY

The Union Judiciary

The Supreme Court

- The highest legal court with the power to check laws.
- It has a Chief Justice of India and 37 other Judges.
- It exercises original, Appellate and Advisory Jurisdictions.

The High Courts in the States

- The constitution provides for a High Court for each state. Still, there may be one shared High Court for more than one state or Union Territory.
- Each High Court has a Chief Justice and other Justices as the President may think fit from time to time.

The Subordinate Courts

- The Governor of a State chooses district judges after talks with the State High Court.
- The Governor of the state appoints persons other than district to the judges to the judicial service according to the

- The Chief Justice is selected by the President after discussing with other Judges of the Supreme Court and High Courts also.
- Each Justice of the Supreme Court stays in office till he reaches the age of 65 years.
- A Justice may be removed by an order of the President after following the steps on the basis of proved misbehaviour or incapacity.
- The Supreme Court is a Court of Record.
- Every High Court is a Court of Record and has Original and Appellate Jurisdiction.
- The Chief Justice of a High Court is chosen by the President after talks with the Chief Judge of India and the Governor of the state concerned. The other Justices are chosen by the President after talks with the Chief Justice of India, the Chief Justice of the High Court and the Governor of the State.
- Each High Court Justice stays in office till he reaches the age of 62 years.
- A Justice may be removed from his office in the way given for removal of a Justice of the Supreme Court.

rules. The Governor takes advice from the State Public service Commission and the High Court before making these appointments.

Analyze Thoughts

(a) Who maintains the roads and street lights in your neighbourhood?

(b) What is the name of the MLA and MP of your area?

In-Text Questions

Fill in the blanks.

1. There are ..... parts of the government.
2. ..... explains the rules and makes sure fairness is given in a just way.
3. ..... changes old rules or cancels them if they are not needed anymore.
4. India has ..... of government.
5. The City Corporation is an example of ..... .

DR. A.P.J. ABDUL KALAM

Known as the "Missile Man of India", Dr. APJ Abdul Kalam came into the world on October 15, 1931, in Rameswaram, Tamil Nadu, India in a humble household. His father worked as a boat keeper while his mother managed the home. During childhood, Kalam delivered newspapers to help his family while studying in school.

Kalam as President of India

Since boyhood, Kalam was very diligent and had strong liking for learning, mainly numbers and science. He studied air-space engineering at the Madras Institute of Technology (MIT) and entered the Indian Space Study Organisation (ISRO) in 1969. He played an important part in India's space work and the making of guided rockets and launch craft systems. He worked on the Agni and

Prithvi rockets and gained the name "Missile Man of India". He also had a key part in the atomic trials carried out by India in 1998. He further served as the Principal Scientific Adviser of the Government of India and Head of the Defence Research and Development Organisation (DRDO) from 1992–1999.

Dr. Kalam was chosen as the 11th President of India and kept this role from 2002–2007. He was known as the "People's Leader" because of his modest nature and his devotion to public duty. He became a source of inspiration for countless young people in India and across the globe. He urged the youth to dream high and pushed them to work for the progress of their nation. He welcomed learners, researchers, teachers and even common citizens to meet him at Rashtrapati Bhavan. He always stressed doing duty for the nation, growth in science and spreading learning.

He went to many learning places and institutes during his time as Leader. He authored works such as Wings of Fire, Ignited Minds, India 2020: A Dream for the New Century, Mission India: A Dream of Indian Youth, and others to encourage the young people of India and build in them a feeling of honor for the nation.

1. Dr. Kalam was awarded with many honours, such as the Padma Bhushan (1981), Padma Vibhushan (1990) and the Bharat Ratna (1997), India's top civilian honour.
2. Dr. Kalam's path from a small town to the Leader of India shows the value of effort, devotion and loyalty towards one's aims.
3. Listed below are some of the most well-known sayings of Dr. Kalam that show his dream, knowledge and hopeful outlook towards living.

Let us meditate o na few of his inspiring thoughts:

Teaching is a very noble profession that builds the nature, skill and future of a person.

Greatness is an ongoing journey and not by chance.

To achieve success in your task, you must have full focus and loyalty to your aim.

If you fall short, never stop because FAIL means 'First Effort In Learning'.

You should not quit and we should not let the trouble beat us.

Climbing to the peak needs power, whether it is to the peak of Mount Everest or to the peak of your work life.

If you wish to glow like the sun, first burn like the sun.

Dr. APJ Abdul Kalam Receiving Bharat Ratna

DEMOCRACY

The word "Democracy" comes from the Greek word "Demokratia", where "Demos" means people and "kratia" means rule or power. So, democracy means rule by the people. Abraham Lincoln said, "Democracy is government of the people, by the people and for the people." This means that in a democracy, the government is formed and run by the people. The real power belongs to the citizens, who make sure the government works for the welfare of all people, not just a few.

The main features of Democracy are:

- All important decisions are taken by leaders chosen by the people.
- Elections are held regularly, giving people a chance to choose or change their leaders.
- Every adult citizen has the equal right to vote. Each person has one vote, and every vote has equal value.
- A democratic government follows the principles laid down in the constitution and protects the rights of citizens.

Do you know?

The Common Grown-up Voting Right means that all people who are 18 years old and above, regardless of their caste, gender, education, faith, shade, origin or money standing, have the right to cast a vote.

A Representative Democracy

India is a democratic country because the people of India have the power to vote and choose their leaders through free and fair elections. You may be surprised to know that India is the world's largest democracy, with a population of over 1.4 billion people. In 2024, about 969 million people were eligible to vote, including 18 million first-time voters.

People in queue for voting

With such a large population, can everyone really govern? It is not possible because it would create confusion and disorder. Therefore, the people choose their representatives to make decisions and laws for them. The leaders elected by the people represent their interests in the government. This is called a Representative Democracy. It is like how your class monitor represents all the the teacher or the principal of your school.

Go Further

Electronic Voting Machines (EVMs) were first used on a nationwide scale across all constituencies India during the National Elections of 2004. Earlier, Indian elections used paper ballots.

The main features of representative democracy in India are as follows:

- All people do not govern directly in a democracy. They govern through their elected representatives at different levels such as local, state and national levels.

Application of indelible ink on the elector's finger

- The elected representatives have different names at different levels. At the local level, they are called Panchs in villages and Members in urban areas.
- At the state level, they are called 'Members of Legislative Assembly' (MLAs) or 'Members of Legislative Council' (MLCs).

Electronic Voting Machine (EVM)

- At the national level, the elected representatives are called the 'Members of Parliament' (MPs).
- People show their support to a government by taking part in elections and choosing their representatives. While the winning party forms the government, the other elected representatives form the opposition. Together, they form the Parliament that guides and controls the government.
- In a representative democracy, decisions are made after many talks, discussions, suggestions and agreement of all people affected by that decision. Both the powerful and weak have an equal voice in making decisions.
- The elected representatives are responsible to the people who choose them and can be removed in the next elections if they do not keep their promises made to the people.

Direct Democracy

Imagine your parents want the whole home to be coloured. But, there is a clash of views on the shades to be used. Finally, your grandfather decides that everyone should cast a vote on the shade. The choices he gives are blue, green, pink and red. Each family member is given the right to vote and it is decided that the shade with the most votes will be selected for colouring. This is an example of a direct people's rule where each family member has a direct role in choice-making.

So, in a direct people's rule, people directly take part in decision-making and governing, instead of choosing representatives to do it for them. They directly vote on laws, plans and important matters themselves and thus have a bigger role in the working of the government. People can also suggest new laws or changes to old laws and vote on them. Switzerland is a clear example of a country that uses direct people's rule widely at the local and national levels.

Grassroots Democracy

This is a type of people's rule where people participate directly in decision-making at the local or community level. In this, persons at the grassroot level are urged to join in ruling. It lets the persons at the grassroot level have straight control over choices touching their daily lives and makes sure that nearby troubles are solved at the village or group stage.

In India, the Panchayati Raj System is an example of grassroots democracy where villagers or community members choose the Sarpanch (village head) and other members of the Panchayat (village council). The Panchayat makes decisions about local matters of the village like building and maintenance of roads, care of water sources, schools and health centres. Decisions are made according to the needs and choices of the community members.

Analyze Thoughts

In a people's rule, people have the right to cast votes and elect their leaders. Why is it needed for all to cast votes for their representatives.

What will take place if only the wealthy and powerful are given the right to cast votes?

In-Text Questions

State whether True or False.

1. In a democracy, the laws are formed and managed by the people it serves.
2. Only the wealthy and powerful are helped by people's rule.
3. At the national level, the chosen representatives are named MPs.
4. The Panchayati Raj Setup is an example of grassroot democracy.
5. In a direct democracy, citizens participate directly in decision making and governance.

IMPORTANT TERMS

- **Governance:** System of governing a land
- **Organisation:** Structured body with clear purpose
- **Clash:** Conflict between two or more people , groups
- **Legislature :** People who create laws
- **Base setup:** Core infrastructure of land
- **Executive:** Officials enforcing rules strictly
- **Carry out:** Implement a plan or rule
- **Apply force:** Ensure rules are followed
- **Court system:** Network of legal tribunals
- **Decision:** Conclusion reached by authority
- **Directive:** Official instruction from authority
- **Natural calamity:** Harmful event from nature
- **Balance of powers:** Power shared among authorities
- **Explain:** Clarify meaning or purpose
- **Constitution:** Collection of governing rules
- **Representative people's rule:** Elected officials govern populace
- **In name only:** Figurehead without real power
- **Assembly:** Gathering to discuss rules
- **Grassroots democracy:** Local citizens make choices
- **Direct people's rule:** Citizens vote on decisions

QUICK TAKE

- Three Government Branches are:
  (a) Lawmakers: Make laws for the society.
  (b) Executors: Implement and enforce the laws.
  (c) Judiciary: Explains laws and makes sure justice is followed.
- Governance means the methods, systems and structures that manage, guide and control a society or area.
- Representative Democracy depends on discussion, suggestions, talks and agreement among people affected by decisions.
- Government is a system that decides political actions to guide a country or region
- Power is divided among branches to stop one branch from having too much control, creating checks and balances.
- Democracy comes from the Greek word "Demokratia," which means "people's control and power in government."
- Government levels include:

(a) Local: Village councils or city bodies manage local needs and services.
(b) State: State governments manage larger issues like health and internal matters.
(c) National: Central leaders manage security, trade and nationwide priorities.

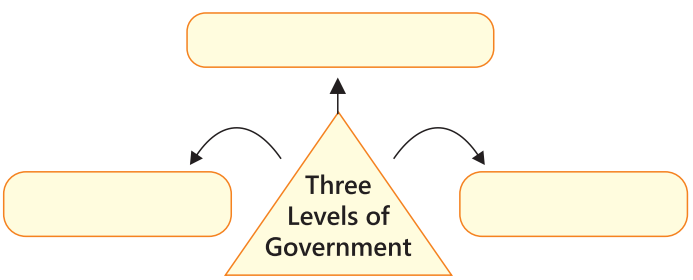
- Grassroots Democracy allows local people to make decisions, like Panchayati Raj in Indian villages.
- Citizens choose leaders to make decisions in a Representative Democracy.
- Direct Democracy allows citizens to take part directly in decisions and public work.

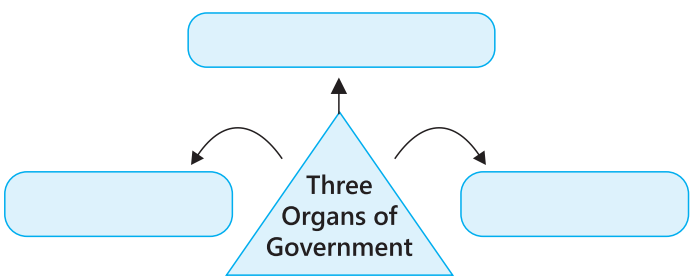
I. OBJECTIVE TYPE QUESTIONS

A. Choose the correct answer.

1. Which branch of the government is responsible for making laws?
   (a) Courts ☐ (b) Administration ☐ (c) Legislature ☐ (d) Police force ☐
2. Which of the following is an example of local government?
   (a) National Parliament ☐ (b) City Municipal Council ☐
   (c) State Assembly ☐ (d) Apex Court ☐
3. Which of the following are functions of the government?
   (a) Making laws ☐ (b) Providing medical services ☐
   (c) Solving disputes ☐ (d) All of these ☐
4. Which system in India is an example of grassroots democracy?
   (a) National Parliament ☐ (b) Apex Court ☐
   (c) Village Panchayati Raj System ☐ (d) State Assembly ☐
5. Which of the following is a function of the judiciary?
   (a) Makes laws ☐ (b) Guarantees fair justice delivery ☐
   (c) Executes government schemes ☐ (d) Controls military activities ☐

B. Fill in the blanks.





C. Write 'T' for True or 'F' for False.

1. The government is responsible for providing basic services like schools, healthcare, and transport for people. ☐
2. In a democratic system, the government is created and run by the people it represents. ☐
3. The Panchayati Raj system shows local self-government in a village. ☐
4. The lawmaking body changes and removes old rules when they are not needed anymore. ☐
5. In an indirect democracy, elected representatives-not all citizens-make decisions and enact laws. ☐

D. Choose the option that correctly matches items from Column A and B.

Column A	Column B
1. Democracy	(i) People choose delegates to take decisions
2. Indirect Democracy	(ii) People engage personally in policy-making at the community level
3. Direct Democтacy	(iii) Rule by the people
4. Citizen Control	(iv) People take part personally in policy-making and administration.

(a) 1.-(iii), 2.-(i), 3.-(ii), 4.-(iv)
(b) 1.-(i), 2.-(iii), 3.-(iv), 4.-(ii)
(c) 1.-(i), 2.-(ii), 3.-(iii), 4.-(iv)
(d) 1.-(iii), 2.-(i), 3.-(iv), 4.-(ii)

E. Assertion-Reason

For question numbers 1 to 4, two sentences are provided—one marked Assertion (A) and the other marked Reason (R). Choose the right answer to these questions from the codes (a), (b), (c) and (d) as listed below:

1. **Assertion (A):** The Judiciary ensures that justice is given in a fair way.
   Reason (R): The Judiciary follows and uses the laws made by the Legislature.
2. **Assertion (A):** India follows a system of indirect democracy.
   Reason (R): In a direct democracy, people vote directly on rules and policies.
3. **Assertion (A):** There are three tiers of governance.
   Reason (R): There are three branches of government.
4. **Assertion (A):** The Panchayati Raj scheme is an example of grassroots democracy.
   Reason (R): In local democracy, decisions are made at the village or community level.

(a) Both Assertion (A) and Reason (R) are correct and Reason rightly explains the Assertion.
(b) Both Assertion (A) and Reason (R) are correct but Reason does not properly explain the Assertion.
(c) Assertion (A) is correct but Reason (R) is incorrect.
(d) Assertion (A) is incorrect but Reason (R) is correct.

II. SHORT ANSWER TYPE QUESTIONS

1. Explain the roles of the municipal government.
2. Describe how the sharing of power works as a system of checks and balances.
3. Give reasons why government is important for a country.
4. Explain the importance of indirect democracy.
5. Write a short note on the Judicial branch.

III. LONG ANSWER TYPE QUESTIONS

1. Explain why sharing of power is important in a government.
2. Describe how local democracy helps people at the community level.

IV. DISTINGUISH BETWEEN THE FOLLOWING

1. Legislative body and Executive branch
2. Central level and State level of government
3. Direct democracy and Local-level democracy

V. PICTURE STUDY

1. What action is shown in the picture?
2. Why is voting important in a democratic system?
3. Who has the right to vote in India?
4. How does voting help people choose their representatives?

VI. SOURCE BASED QUESTIONS

Read the given passage and answer the following questions.

A government is a system that runs a country and works for the peace, safety and well-being of its people. It creates laws, provides services like schools, hospitals and transport, protects the country's borders and handles emergencies. To stop the misuse of power, it is divided into three parts: the Legislature (makes laws), the Executive (carries out laws) and the Judiciary (gives justice). These parts work separately but also check each other to keep a balance. In India, government works at three levels: local (villages and cities), state (regional areas) and national (the entire country), to meet people's needs at different levels.

1. Why is the government divided into three parts: Legislature, Executive and Judiciary?
   (a) To prevent the misuse of power ☐ (b) To stop making any laws ☐
   (c) To let only one person rule ☐ (d) To make the government work faster ☐
2. If the Executive does not carry out a law properly, which part can act to provide justice?
   (a) National Government (b) ☐ Legislature ☐
   (c) Judiciary ☐ (d) Local Government ☐
3. Which level of government is responsible for repairing a broken street light in your area?
   (a) State government ☐ (b) Local government ☐
   (c) National government (d) ☐ Judiciary
4. Why does India have three levels of government: local, state and national?
   (a) To address needs at different levels of society ☐
   (b) To confuse people ☐
   (c) To give more power to one leader ☐
   (d) To avoid making decisions ☐

Citizen's Report Card:

Students create a simple scorecard to check how well local government provides needs like water, cleanliness, and education.

Report card

Category	Rating (1–5)	Comments/Observations
Water Supply	3	Water available but irregular supply
Cleanliness	2	Streets are often littered, garbage is not collected daily
Education	4	Schools available, but lack modern facilities
Healthcare	3	Clinics exist, but overcrowded and under-staffed
Public Safety	4	Police presence visible but slow response times
Infrastructure	2	Roads damaged, poor street lighting

11 Grassroots Democracy- Part 2 Local Government in Rural Areas

Let's Learn About

- Panchayati Raj System
- Child-Friendly Panchayat Initiative
- Zila Parishad
- Gram Panchayat
- Panchayat Samiti

Let's Gear Up

People sat together under the shade of a neem tree. The Sarpanch told them, "Real freedom starts here, with our own decisions." The villagers agreed, knowing that their Gram Panchayat was like a small government. They talked about managing water, farming and education without waiting for support from others. Even when some people had different opinions, they believed they could stay strong together. By becoming independent and united, the village showed that democracy is not only found in big cities—it begins at the local level, where every person's voice is important and decisions affect everyday life.

Gram Sabha Meeting

The Gram Sabha meeting of village Anandgram was fixed at 11:00 AM. The meeting was attended by the Panchayat head (Mukhia), the elected members (Panchs) and all villagers aged 18 years and above. To begin with, the Mukhia proposed a plan to establish a primary school on the eastern edge of the settlement and to mend the road linking the village with the sub-divisional town of Sukhgram. Afterwards, the discussion shifted to the issue of water scarcity in the locality. A resident named Praveen brought up the matter, stating, "The shortage of water is severe in our village. Women must walk nearly 2 kilometres to fetch water from the river." Everyone agreed with his concern. Pushpak recommended building an overhead tank in the village

A meeting of the Gram Sabha

to store river water. However, most members opposed the idea as it would cost too much. Several alternatives were suggested, but none received unanimous approval. Finally, Preetam proposed watershed development, a scheme for which government support is also available. All participants found it to be a practical and promising suggestion. Consequently, the Gram Sabha instructed the Gram Panchayat to gather detailed information about watershed development.

Gram Panchayat Meeting

Gram Panchayat meeting

A Gram Panchayat gathering took place to deliberate on watershed development. Present at the session were the village head (Mukhia), the elected representatives (Panchs) and the Secretary. Since the Gram Panchayat is answerable to the Gram Sabha, its participants examined the issue of water scarcity and resolved that measures must include both immediate as well as long-range strategies for managing water resources.

Short-term Solution

As an immediate measure, the village head and the council members decided to further excavate the current tubewells. The village chief sanctioned money for the proposal. Consequently, every representative approved the quick remedy to address the lack of water. The scribe noted down the resolution.

Long-term Solution

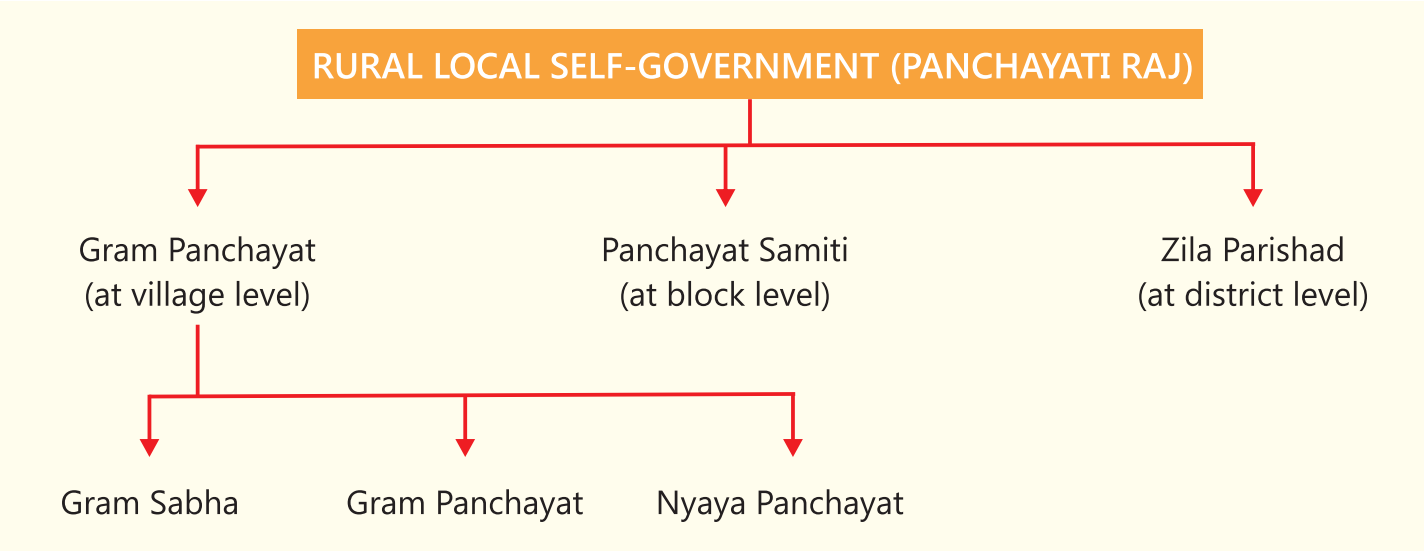
The representatives of the Gram Panchayat further deliberated on a permanent remedy. In conclusion, they resolved that the Panchayat would contact the Block Development Officer (BDO) to make provisions for watershed development in the community.

PANCHAYATI RAJ SYSTEM

Village self-government works through the Panchayati Raj system. This system helps villagers take part in running their own local administration. The main aim of Panchayati Raj is to give people more chances to join in governance and share their problems about issues that affect them. It also ensures that the benefits of government schemes reach people living at the local level.

The Panchayati Raj functions as a three-level structure comprising the Gram Panchayat at the village stage, the Janpad Panchayat or Panchayat Samiti at the block stage and the District Panchayat or Zila Parishad at the district stage.

Discussion being held in a village meeting



GRAM PANCHAYAT

The Panchayat system has been present in India since ancient times. The word 'Panchayat' means a group of five people. In the past, villagers selected five respected elders, known as 'Panchs', who looked after local matters and solved disputes in the community. Their decisions were accepted and followed by all villagers. However, this system became weaker during British rule, as British officers appointed their own people to manage village affairs. After Independence, the Panchayat system became important again. In 1992, the Union Government made rules for the Panchayati Raj system, which started in April 1993.

At the village level, the Panchayati Raj system consists of three main bodies—the Village Meeting (Gram Sabha), the Village Council (Gram Panchayat) and the Village Court Committee (Nyaya Panchayat).

The Gram Sabha

The Gram Sabha is a meeting of all adult people living within the area of a Panchayat. A Panchayat may include one village or a group of villages. Every person who is 18 years or older and whose name is on the voter list is a member of the Gram Sabha. It is a platform where people directly participate and ask their elected representatives to be responsible. These meetings are held at least two times every year. The Gram Sabha works in a village like the Lok Sabha at the national level and the Legislative Assembly at the state level.

Gram Sabha

Functions of the Gram Sabha

The Gram Sabha performs many important duties.

(i) It selects the members who form the Gram Panchayat. These members look after the daily administration and work of the Panchayat.

(ii) It selects the Sarpanch, who is the head of the Gram Panchayat and is also known as the village leader or Mukhia. He or she leads the meetings of the Gram Sabha.

(iii) It discusses important matters and problems related to the village.

(iv) It makes sure that the Gram Panchayat is responsible to the villagers who choose its members.

(v) It approves the yearly budget of the Panchayat and checks its work along with records of money received and spent.

(vi) It prevents the Panchayat from doing wrong activities like misuse of money, corruption, or unfair treatment.

(vii) The Gram Sabha can pass a no-confidence motion against any Gram Panchayat member if people are unhappy with their work. As a result, the member has to leave the post and a new representative is selected.

(viii) It protects and promotes social unity by involving volunteers in different community activities.

The Gram Panchayat

The Gram Panchayat is a group elected by the villagers. It carries out the decisions made by the Gram Sabha and works as its executive body. Each Panchayat is divided into smaller parts called wards. From each ward, one person is elected, known as the Ward Member or Panch. The members of the Gram Sabha directly elect a Sarpanch, who works as the head of the Panchayat. All these elected members together form the Gram Panchayat. The Gram Panchayat works for five years, and one-third of its total seats are reserved for women.

A Gram Panchayat

Go Further

Some Exemplary Sarpanchs

1. **Chhavi Rajawat (Sarpanch of Soda Village, Rajasthan)**
   Chhavi Rajawat is recognized as India's first female Sarpanch holding an MBA qualification. She effectively carried out several initiatives in her village, including rainwater conservation, hygiene improvement, road construction and rural job creation. She arranged training programmes for women in areas such as stitching, handicrafts

and digital skills, enabling them to achieve economic independence. Through her guidance, Soda village transformed into an example of sustainable progress.

2. **Meena Behen (Sarpanch of Vyara Village, Gujarat)**

Meena Behen carried out several development programmes in her community. After 65 years, the village established its own Panchayat council, which is entirely composed of women. She concentrated on enhancing essential facilities such as cleanliness, drinking water and schooling. Since the approach to the village was very difficult, she took up the responsibility of building a road there. Through a government initiative aimed at providing homes for the underprivileged, she constructed more than 30 houses in the settlement and now intends to set up a government hospital in the area.

3. **Neeru Yadav (Sarpanch of Lambi Ahir Village, Rajasthan)**

Known as the "Hockey Sarpanch," Neeru Yadav encourages schooling and athletics among rural children, particularly girls. She launched hockey coaching programmes and enhanced learning infrastructure, which earned Lambi Ahir nationwide acclaim for its sporting accomplishments.

4. **Chintala Venkat Reddy (Sarpanch of Kowkoor Village, Telangana)**

Chintala Venkat Reddy, a cultivator-turned-village head, is renowned for his breakthroughs in natural farming. He adopted eco-friendly cultivation methods in his community that boosted harvests without damaging nature. His efforts brought him appreciation from authorities and environmental organizations for advancing green agriculture. In 2020, he received the Padma Shri award for his valuable services to farming.

The state government appoints a Secretary for the Gram Panchayat, who also works for the Gram Sabha. The Secretary receives a fixed salary. He or she arranges the meetings of the Gram Sabha and Gram Panchayat. He or she records the discussions and looks after the work of the Gram Panchayat office.

Many Gram Panchayats appoint an officer called the Patwari, who is responsible for maintaining land records and collecting revenue in villages. He is also known as Lekhpal, Kanungo, Karamchari or Village Officer. Each Patwari looks after a group of villages.

Do you know?

The Sarpanch Samvaad application is an online platform designed to link nearly 2.5 lakh village heads across India, offering a space for interaction, exchange of ideas and joint efforts. Using this app, the Sarpanches can present the progress and projects undertaken in their villages to inspire fellow leaders to adopt creative approaches for local development.

Analyze Thoughts

Imagine you are the head (Sarpanch) of a village. Prepare a list of measures you would undertake to transform your village into a model settlement within your Block.

Functions of a Patwari

The main responsibilities of the Patwari include:

(i) Survey land and keep land records.

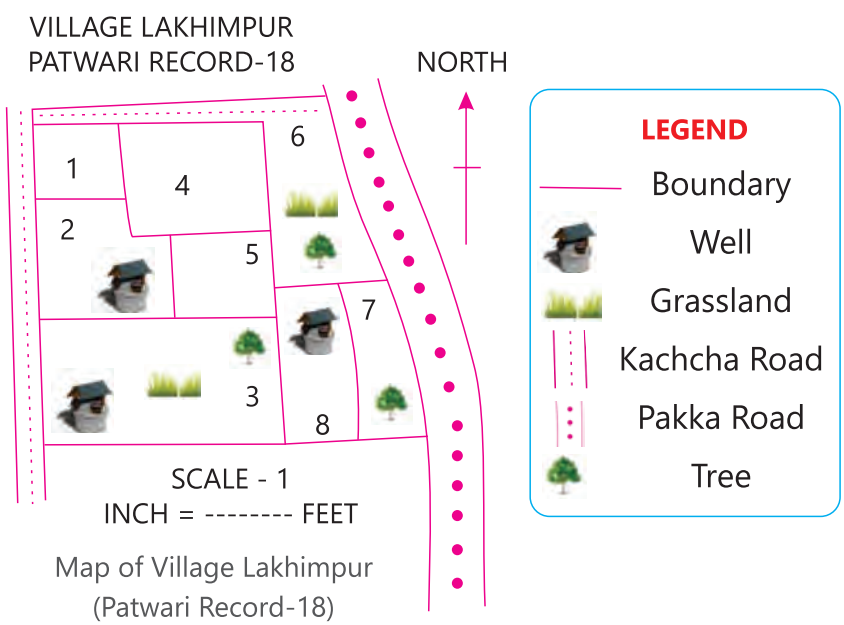
(ii) Maintain and update the records of a village. The Patwari keeps the village map along with important details like Khata number, Khasra number and others. Many of these maps have been saved for many years. The Khasra register kept by the Patwari gives information about the village area. It clearly tells which piece of land belongs to which person. To measure farmland, the Patwari usually uses a long measuring chain.

(iii) He/she collect land taxes from farmers.

(iv) He/she informs the authorities about the kinds of crops grown in the area.

(v) He/she checks the village lands. Farmers may change the crops on their fields or someone may build a well—watching and noting all such changes is the duty of the Patwari.

A Patwari showing land records



Map of Village Lakhimpur (Patwari Record-18)

The Khasra Record of the Patwari of Village, Lakhimpur

Khasra No. 3

No	Area in hectare	Name of owner, Father or husband's name, address	If it is rented to some other farmers, their names and rent received	Area cultivated this year			Area not cultivated fallow land	Facilities
				Crop grown	Area	Second crop grown		

1	2	3	4	5	6	7	8	
1	0.50	Alam, Son of Usman, Village Lakhimpur, owner	No	Lentil	0.50 Hect.			
2	2.00	Naval Kishore, Son of Awadh Kishore, Village Lakhimpur, owner	No	Lentil, Wheat, irrigated	1.75 Hect.	0.75	0.25	Well-1 working
3	10.00	Bihar Government Grassland						Well-1 working Grazing

A cultivator might need a duplicate of his land documents along with a map in several cases.

These include:

- When a cultivator wishes to share his estate among his offspring.
- When a cultivator plans to purchase land from or sell land to another.
- When a cultivator intends to acquire manure or fertilizers for his farmland.
- When a cultivator seeks financial assistance from a bank to construct a well on his property.

Cultivators possess the right to access details of their documents. These documents are presently digitised and usually stored in the Panchayat Office so that they remain easily accessible and frequently revised. Individuals can receive such details by paying a small charge.

Functions of the Gram Panchayat

The Gram Panchayat carries out these main duties:

(i) It looks after the construction and repair of water facilities, roads, drains, school buildings and other common resources.

(ii) It collects taxes from the community.

(iii) It carries out state programmes related to creating jobs and reducing poverty.

(iv) It provides healthcare and sanitation services.

(v) It stops the spread of diseases through vaccination.

A Village School

(vi) It provides primary education in the village.

(vii) It keeps records of births and deaths in the village.

(viii) It supports cultivators in enhancing their fields and livestock and assists in supplying quality seeds and fertilizers.

(ix) It looks after the welfare of the weaker sections of the village.

(x) It organises animal fairs and village festivals.

Health Education and Check-up Camp

Sources of Income

The Gram Panchayat gets money from different sources:

(i) It collects revenue by charging taxes on houses, markets, fairs and other places.

(ii) It receives financial help from government schemes through various departments such as the Janpad and Zila Parishad.

(iii) It accepts contributions for public welfare activities.

(iv) It collects fees for registering the buying and selling of cattle, land and other property.

Meeting of a Gram Panchayat

(v) It gets a share of some taxes and fees collected by the state government.

(vi) It earns money by selling property owned by the community.

(vii) It receives financial support as grants from the state government.

The Nyaya Panchayat

The Nyaya Panchayat works as the judicial part of the Panchayati Raj system at the village level. Its term is five years, and its members are selected in the same way as the members of the Gram Panchayat.

It hears and solves small civil and criminal cases. It has the power to charge fines and punish offenders within certain limits. However, it cannot send anyone to prison. The main aim of the Nyaya Panchayat is to provide fast justice at the lowest possible cost.

A Nyaya Panchayat

In-Text Questions

State whether True or False.

1. The Panchayati Raj functions as a system with three levels.
2. Regulations for the Panchayati Raj framework came into force in April, 1994.
3. The Gram Panchayat is chosen for a duration of five years.
4. The Khasra register of the Patwari provides no details about the village layout.
5. One-third of the overall positions are set aside for women in the Gram Panchayats.

CHILD-FRIENDLY PANCHAYAT INITIATIVE

A Bal Sabha

The Child-Friendly Panchayat Programme is a plan that focuses on the needs of village children through Bal Sabha and Bal Panchayats. It ensures the welfare, safety and protection of children in rural areas and provides them a place to share their concerns about important matters. It also makes sure that the basic needs of children like education, healthcare, cleanliness and participation in community activities receive proper attention and are included in local decisions. Many states have started forming Bal Panchayats and encouraged children to take an active part in their meetings.

Some important examples of these are given below:

Thirunelli Panchayat, Kerala

The Panchayat took steps to stop child trafficking and improved the education facilities available for children. It opened many Anganwadis or childcare centres to protect children and ensured that they attend school regularly.

Thirunelli Panchayat, Kerala

Punnapra Thekku Panchayat, Kerala

It is the first fully child-friendly Panchayat in the state. It is also the first Panchayat in the state to form a Child Protection Committee in every ward. A Child Monitoring Committee and a Child Resource Committee have also been made to look after child-related activities. Facilities like one desk-one chair, colourful tents, play areas, boundary walls, toilet blocks, soak pits and more have been provided in schools. Toys, flagpoles, wall paintings, cooking utensils and internet facilities have been given in Anganwadis.

Dungarpur Panchayat, Rajasthan

Dungarpur district in Rajasthan has been recognised for its efforts in making child-friendly Panchayats. It has improved school facilities, ensured regular attendance of students and organised awareness programmes on child education and child safety.

Sangkhu Radhu Khandu Gram Panchayat in Dentam, West Sikkim

This Panchayat has been recognised as a child-friendly Gram Panchayat for its efforts like building boundary walls in schools to keep children safe and making kitchens in schools to provide clean midday meals. The Panchayat plans to take strong action against child abuse and other crimes against children. It also aims to empower children in Gram Panchayats and help them develop their skills. Additionally, the Panchayat works to spread awareness among people at the local level about child rights, encourage children's participation in community activities and solve their problems effectively.

Children's Parliament, Rajasthan

Children's Parliament

This is a part of Bunker Roy's Barefoot College initiative and received the World's Children's Honourary Prize in 2001. It has played an important role in empowering children by involving them in democratic activities and helping them understand governance, decision-making and the value of working together.

An important idea of the children's parliament was to give children roles like those in real government bodies, such as Prime Minister, Ministers and other officers. The children took part in elections and followed official steps like voter ID cards and election campaigns. The selected members formed a 'Cabinet' and discussed issues affecting their community, such as education, health, cleanliness, child labour, child marriage, school attendance and malnutrition. This helped them learn about organisational systems, voting methods and responsibilities of leaders.

PANCHAYAT SAMITI

Block Development Officer (BDO)

The Panchayat Samiti looks after many Gram Panchayats. It is also called the Janpad Panchayat or Block Samiti. It works at the block level. The Block Development Officer (BDO) works as the secretary of the Panchayat Samiti.

Functions of the Panchayat Samiti

The duties of the Panchayat Samiti are as follows:

(i) The Panchayat Samiti supervises the work of Gram Panchayats in a block.

(ii) It makes plans for the overall development of the block.

(iii) It has experts from different fields who guide villagers about various development activities.

(iv) It receives financial help from the government for development projects and schemes like the Pradhan Mantri Gram Sadak Yojana (for constructing rural roads), Pradhan Mantri Awaas Yojana Gramin (for providing affordable houses to poor villagers) and Swachh Bharat Mission-Gramin (for stopping open defecation and improving cleanliness in villages).

ZILA PARISHAD

The District Panchayat, also called the Zila Parishad, is the highest administrative body in the

Analyze Thoughts

- Out of the five child-friendly Panchayats you studied, which one left the greatest impact on you and for what reason?
- If you were chosen as a representative in any child-friendly Panchayat, outline the steps you would adopt to safeguard the welfare and encourage the active involvement of children in your locality.

Panchayati Raj system. It works at the district level. An officer with the post of District Magistrate works as the Chief Executive Officer of the Zila Parishad.

Functions of the Zila Parishad

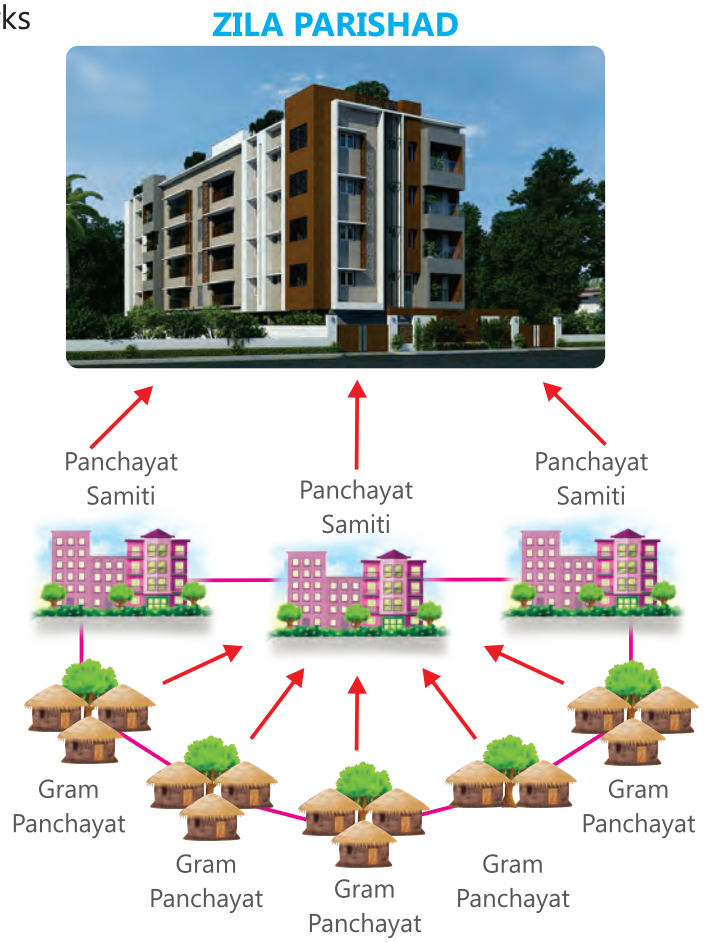
The main duties of the Zila Parishad are:

(i) It monitors the work of Panchayat Samitis, Gram Panchayats and schemes under the Five-Year Plans.

(ii) It makes development programmes at the district level.

(iii) It manages the sharing of funds among all Gram Panchayats with the help of Panchayat Samitis..

(iv) It guides the state government on Panchayati Raj work. Every state in our country has its own Panchayat rules.



Zila Parishad

In-Text Questions

Fill in the blanks.

1. The Punnapra Thekku Gram Panchayat lies in the state of ..... .
2. The ..... Children's Parliament was honoured with the World's Children's Award in 2001.
3. The ..... serves as the secretary of the Panchayat Samiti.
4. The ..... functions at the district level.
5. The ..... is the supreme administrative body within the Panchayati Raj framework.

IMPORTANT TERMS

- **Inhabited:** Lived in by people
- **Patwari:** Village land record officer
- **Mukhia:** Elected head of village council
- **Watershed Development:** Water resource management method
- **Republic:** Government run by elected people
- **Lekhpal/Kanungo/Karamchari:** Officials maintaining land records
- **Khata No. / Khasra No.:** Land identification numbers

- **Khasra Record:** Village land ownership register
- **Revenue:** Government income from taxes
- **Anganwadi:** Rural child care centre
- **Bal Sabha:** Children's village discussion group
- **Panchayati Raj:** Village self-government system
- **Swachh Bharat Mission Gramin:** Rural sanitation improvement programme
- **Pradhan Mantri Awaas Yojana Gramin:** Rural housing assistance scheme
- **Pradhan Mantri Gram Sadak Yojana:** Rural road construction scheme
- **Sustainable:** Environment-friendly, long-term use
- **Judicial:** Related to courts and justice
- **Nyaya Panchayat:** Village level dispute court
- **Zila Parishad:** District level rural council

QUICK TAKE

- Village administration works through Panchayati Raj, helping rural people manage local matters on their own.
- Panchayati Raj has three levels: Gram Panchayat at village level, Janpad Samiti at block level and Zila Parishad at district level.
- The word Panchayat means a group of five chosen members.
- The Central Government made Panchayati Raj rules in 1992, which started officially from April 1993.
- At the village level, Panchayati Raj has Gram Sabha, Gram Panchayat and Nyaya Panchayat bodies.
- Gram Sabha includes all adult people living within the Panchayat area.
- All citizens aged eighteen plus who are listed voters automatically belong to the Gram Sabha.
- Gram Panchayat consists of elected villagers who carry out decisions made by Gram Sabha.
- Gram Panchayat members work for an elected period of five years.
- The state government appoints the Panchayat Secretary, who also works as the Gram Sabha secretary.
- The Patwari keeps land records and collects village revenue.
- Nyaya Panchayat performs judicial duties in the village government system.
- Nyaya Panchayat mainly provides quick and low-cost justice to local people.
- Child Friendly Panchayat Initiative focuses on village children through Bal Sabha and Bal Panchayat groups.
- Panchayat Samiti looks after many Gram Panchayats at the block level.
- Panchayat Samiti is also known as Janpad Panchayat or Block Samiti.
- The Block Development Officer works as the secretary of Panchayat Samiti.

I. OBJECTIVE TYPE QUESTIONS

A. Choose the correct answer.

1. Which of the following is a function of the Gram Sabha?
   (a) Selecting Panchayat members ☐ (b) Holding the Panchayat responsible ☐
   (c) Collecting taxes ☐ (d) Passing the yearly budget ☐
2. Who is responsible for maintaining land records at the village level?
   (a) Secretary ☐ (b) Patwari ☐
   (c) Block Development Officer (BDO) ☐ (d) Sarpanch ☐
3. Who conducts the meetings of the Gram Sabha?
   (a) Ward Representative ☐ (b) Block Development Officer (BDO) ☐
   (c) Sarpanch (Village Head) ☐ (d) Patwari ☐
4. What is the main aim of the Child-Friendly Panchayat Programme?
   (a) Providing money to children ☐ (b) Child welfare & participation ☐
   (c) Jobs for youth ☐ (d) Promoting child marriage ☐
5. What percentage of seats in the Gram Panchayat is reserved for women?
   (a) 50% ☐ (b) 25% ☐ (c) 33% ☐ (d) 20% ☐

B. Write 'T' for True or 'F' for False.

1. Dungarpur district is located in Gujarat. ☐
2. The Gram Panchayat is not allowed to collect or charge taxes. ☐
3. Local Self-Government manages problems at the community level. ☐
4. The Patwari is a senior officer in the revenue department. ☐
5. The Panchayati Raj system has a two-level structure. ☐

C. Choose the option that correctly matches items from Column A and B.

Column A	Column B
1. Sarpanch	(i) Keeps land registers
2. Patwari	(ii) Secretary of the Panchayat Samiti
3. Block Development Officer	(iii) Elected representative at the village level
4. Ward member	(iv) Head of the Panchayat

(a) 1.-(iv), 2.-(i), 3.-(ii), 4.-(iii)
(b) 1.-(ii), 2.-(iii), 3.-(iv), 4.-(i)
(c) 1.-(iv), 2.-(ii), 3.-(iii), 4.-(i)
(d) 1.-(iii), 2.-(i), 3.-(iv), 4.-(ii)

D. Fill in the blanks.

1. (a) The assembly of villagers that chooses the Gram Panchayat is called the ..... .
   (b) The ..... works as the judicial body in the Panchayati Raj system and solves small disputes.

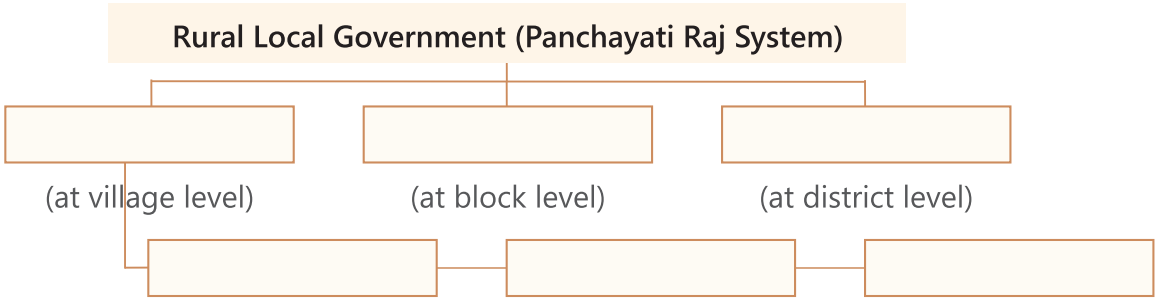
(c) The ..... is an administrative unit that works at the block level and manages many Gram Panchayats.

(d) The head of the Gram Panchayat is known as the ..... .

(e) The Child-Friendly Panchayat Programme is an idea that focuses on the needs of children in ..... villages.

2. **The village administration works through the Panchayati Raj system. It has a three-level structure made up of different governing bodies.**

Fill in the following diagram that shows the different levels of the Panchayati Raj system:



E. Assertion-Reason

For questions 1 to 4, two statements are provided—one marked as Assertion (A) and the other as Reason (R). Choose the correct response from the options (a), (b), (c) and (d) listed below:

1. **Assertion (A):** The State Government appoints a secretary for the Gram Panchayat. **Reason (R):** This official also works as the secretary of the Gram Sabha.
2. **Assertion (A):** The Gram Sabha works as a law-making body, while the Gram Panchayat works as an administrative body at the village level.

   Reason (R): The minimum age to become a member of the Gram Sabha is 21 years, while a Gram Panchayat member must be at least 18 years old.
3. **Assertion (A):** The Panchayat Samiti works at the block level.

   Reason (R): The Panchayat Samiti manages and connects development work among many Gram Panchayats in its block.
4. **Assertion (A):** The Gram Sabha selects the representatives of the Gram Panchayat.

   Reason (R): The Panchayat Samiti has many Gram Panchayats under its area.

(a) Both Assertion (A) and Reason (R) are correct and Reason explains Assertion accurately.

(b) Both Assertion (A) and Reason (R) are correct but Reason does not explain Assertion properly.

(c) Assertion (A) is correct but Reason (R) is incorrect.

(d) Assertion (A) is incorrect but Reason (R) is correct.

II. SHORT ANSWER TYPE QUESTIONS

1. Explain the three-level structure of the Panchayati Raj system.
2. Write the main goals of Bal Panchayats.
3. What is a Nyaya Panchayat? What is the main reason for creating it?
4. Explain the role of the Gram Panchayat in village administration.
5. Name the head of the Gram Panchayat. What work does he/she do?

III. LONG ANSWER TYPE QUESTIONS

1. How can a Bal Panchayat help in making decisions in a village?

2. Write a brief note on the Zila Parishad.
3. Explain the structure and duties of the Panchayat Samiti.
4. Describe the functions and sources of revenue of the Gram Panchayat.

IV. DISTINGUISH BETWEEN THE FOLLOWING

1. Block-level Committee and District Council
2. Village Assembly and Village Council

V. PICTURE STUDY

Imagine a picture of a Gram Panchayat meeting where the Mukhia (village head), Panchs (representatives) and the Secretary are sitting together and discussing water shortage.

1. Who is standing in the middle of the meeting and leading the discussion?
2. What quick action did the Gram Panchayat decide to take to solve the water shortage?
3. Which officer will the Panchayat contact for long-term water development work?
4. Why is the Gram Panchayat responsible to the Gram Sabha?

VI. SOURCE BASED QUESTIONS

Read the given passage and answer the following questions.

The Panchayati Raj System is a three-level system of rural self-government in India that gives villagers the power to take part in decisions. The Gram Sabha includes all adult villagers, and the Gram Panchayat works as its executive body. They manage local matters like water, roads, schools and healthcare. In Anandgram, villagers solved the problem of water shortage through watershed development. This system encourages responsibility, openness and people's participation in democracy.

1. What is the main aim of the Panchayati Raj System in India?
   (a) Centralize administration ☐ (b) Develop cities ☐
   (c) Replace state governments ☐ (d) Empower villagers ☐
2. Which body works as the meeting of all adult villagers at the village level?
   (a) Village council ☐ (b) District council ☐
   (c) Block council ☐ (d) Village assembly ☐
3. What kind of problems are managed by the Gram Sabha and Gram Panchayat?
   (a) National security ☐ (b) Basic services ☐
   (c) Industrial trade ☐ (d) MP elections ☐
4. In the example of Anandgram, what method did villagers use to solve water shortage?
   (a) Build dam ☐ (b) Import water ☐
   (c) Watershed development ☐ (d) Private wells ☐

ACTIVITIES & PROJECTS

Poster Campaign on Rights and Responsibilities

- Design posters about citizens' rights (like voting) and duties (like attending Gram Sabha).
- Display them in school corridors or classrooms.

12 Grassroots Democracy-Part 3 Local Government in Urban Areas

Let's Learn About

- Nagar Panchayat
- Municipal Council
- Municipal Corporation
- Functions of the Municipality and Municipal Corporation
- Sources of Income of the Municipality and Municipal Corporation

Let's Gear Up

Arvika lives in a busy city where traffic problems, overflowing garbage bins and broken streetlights often make everyday life hard. One day, she hears her parents talking about the coming Municipal Corporation meeting where people can share their problems. Interested, Arvika decides to attend. In the hall, she sees councillors and ward members discussing problems like better waste collection, repairing drainage systems and making more green areas. She notices that common people are also allowed to speak about their issues and give suggestions.

Arvika understands that local government is not only about officials—it is about citizens taking part actively to improve their neighbourhoods. While going home, she thinks about how children and young people can also help in these discussions, even if they cannot vote yet.

NAGAR PANCHAYAT

A Nagar (Town) Panchayat is formed for an area that is changing from a village region into a town area. Such a developing area does not fulfil the conditions required to create a Municipal Council. However, it requires a local government body to manage its smooth functioning. The minimum population needed to form a Nagar Panchayat is varies from state to state.

Nagar Panchayat

Composition

The area under a Nagar Panchayat is divided into wards. The registered voters of each ward elect a person called the ward representative. These elected people become members of the Nagar Panchayat. Along with these elected members, it also has some nominated and official members because of their positions. The term of the Nagar Panchayat is five years. However, it can be ended

earlier if it is found to be not working properly.

Functions

The Nagar Panchayat provides water, maintains cleanliness, offers health services, manages sewage disposal, keeps roads clean, provides street lighting, supports primary education, looks after parks and community buildings and organises festivals and public events. It also records births and deaths that happen within its area.

Sources of Income

The main sources of revenue of the Nagar Panchayat are:

(i) Financial help given by the state government.
(ii) Property Tax
(iii) Sales Tax
(iv) Fair Tax

Do you know?

e-Panchayat Mission Mode Project (MMP)

This scheme forms a component of the Digital India Campaign and involves the computerization of internal operations, skill enhancement and community audits. Numerous Nagar Panchayats are presently introducing electronic governance platforms to enhance public services. From online payment of property levies to submitting applications for construction approvals, many Nagar Panchayats are embracing technological solutions to make local administration more effective. This has strengthened openness, responsibility and improved the provision of facilities to residents.

MUNICIPAL COUNCIL

Urban areas with a population between twenty thousand and one million have Municipal Councils. A Municipal Council is also known as a 'Nagar Palika'. It works as a local self-government body for small towns and urban areas.

Composition

The members of a Municipal Council are elected directly by the registered voters of the town. In other words, every person living in the town who is 18 years or older can vote in the municipal elections. People who want to contest the election must be at least 21 years old. The number of members in a Municipal Council is different in each town, depending on its population.

The elected members of the Municipal Council are called Councillors. The term of a Municipal Council, unless ended earlier, is five years.

The Municipal Council also has some nominated and ex-officio members. Some seats are given to people chosen for their special knowledge and experience in city administration. Besides them, the Members of the Legislative Assembly (MLAs) and Members of Parliament (MPs) elected from the area are also members of the Municipal Council. Many urban local bodies in India have reserved seats for women to ensure their participation in local self-government. In 1993, through the

Office of a Municipality

74th Constitutional Amendment, one-third of the seats were reserved for women in Municipal Councils.

The members of the Municipal Council elect a Chairperson who leads the meetings held at regular intervals. They also elect a Vice-Chairperson who takes charge when the Chairperson is absent.

A Municipal Council also has some regular officers who help in its daily work. These include Chief Officers, Clerks, Medical Officers, Sanitation Inspectors, Municipal Engineers, Assistant Engineers and Education Officers. These officials follow instructions and carry out the plans made by the Municipal Council.

In-Text Questions

State whether True or False.

1. There are three categories of local autonomous institutions in the urban regions.
2. The lowest population limit necessary for establishing a Nagar Panchayat is uniformly determined.
3. The Nagar Panchayat is responsible for providing water and maintaining hygiene.
4. No positions are set aside for women in municipal bodies.
5. There is no head or chairperson person in the municipal authority.

MUNICIPAL CORPORATION

Urban areas with a population of more than one million have a Municipal Corporation. A Municipal Corporation, also called 'Mahanagar Nigam', is a local self-government body for big cities. **The Chennai Municipal Corporation**, started in 1688, is the oldest municipal corporation in India. It was established during British rule to improve city facilities and administration. It is also the second oldest municipal corporation in the world, after the City of London Corporation in the United Kingdom. **The Brihanmumbai** Municipal Corporation (BMC), established in 1888, is the **wealthiest municipal corporation** in India. It manages large infrastructure projects, public services and city planning.

Municipal Corporation Office

Chennai Municipal Corporation

Brihanmumbai Municipal Corporation (BMC)

Composition

Like a Municipal Council, the Municipal Corporation consists of representatives elected by the adult citizens of the city. Every person living in the city who is 18 years or older has the right to vote in its elections.

The candidates who want to contest the elections must be at least 25 years old. These elected

members of the Municipal Corporation are called Councillors. For elections, the city area is divided into many divisions, that is, smaller parts. Each division chooses one representative.

Along with the elected members, a Municipal Corporation also has some appointed and ex-officio officials. There are some people called Aldermen, who are usually chosen by the Councillors from among the skilled and respected citizens of the city. The Members of Legislative Assembly (MLAs) and Members of Parliament (MPs) from that area are also included in the Municipal Corporation.

The members of the Municipal Corporation choose the Mayor (Mahapaur) and Deputy Mayor (Up-Mahapaur) from among themselves. The Mayor is the head of the Municipal body and conducts the meetings of the corporation. If the Mayor is not present, the Deputy Mayor carries out his/her duties.

The Municipal Corporation has a Chief Administrative Officer, also called the Municipal Commissioner. This officer works as a link between the Municipal body and the state government. He/She carries out the rules made by the corporation. The heads of different departments like health, education, engineering, sanitation and others help this officer.

The Municipal body creates different committees to handle its daily work. There is a committee for every important area. For example, these includes the Education Committee, Public Health Committee and others. Each committee has 5 to 12 representatives of the Municipal body and a head.

Go Further

The Panaji City Corporation is the India's smallest municipal corporation attending to the needs of Goa's capital city, Panjim.

FUNCTIONS OF THE MUNICIPALITY AND MUNICIPAL CORPORATION

A Municipal Council and a City Corporation perform almost the same functions, which are given below:

Compulsory Functions

1. Public Health
   (i) Establish and manage healthcare facilities, dispensaries, and treatment centres for community use.
   (ii) Arrange services for vaccination and inoculations to prevent the spread of major diseases including tuberculosis, smallpox, malaria, cholera and similar conditions.
2. Sanitation
   (i) Coordinate arrangements for disposal and handling of waste, cleaning streets, marketplaces, drainage systems and public restrooms.
   (ii) Advise inhabitants on health safety practices through different modes of communication.

MCD Hospital

People Engaged in Sanitation Works

3. Water Supply
   (i) Supervise the maintenance of the water supply system.
   (ii) Ensure the supply of safe drinking water.

Water Supply

4. Education
   (i) Establish and manage primary and secondary schools along with facilities for adult education.
   (ii) Develop libraries and supervise the maintenance of museums, zoological gardens and related establishments.

MCD School

5. Lighting
   Coordinate systems for street lights, park lamps, etc.

6. Public Security
   (i) Supervise fire-control teams to protect people from fires.
   (ii) Remove old and dangerous buildings that may collapse and cause accidents.
   (iii) Take steps to maintain the quality of products and check food adulteration.

Fire Brigades

7. Public Works
   (i) Build and maintain roads, flyovers, public facilities, markets, sports complexes, cremation grounds and cemeteries.
   (ii) Demolish illegal buildings.
   (iii) Keep records of births and deaths.

Repairing Roads

8. Maternity and Child Welfare
   (i) Establish and manage mother-and-child health centres.
   (ii) Coordinate public awareness programmes on the welfare of mothers and children.

Maternity and Child Welfare

Optional Functions

The Municipal Council or the City Corporation performs the following optional duties:

(I) Set up and manage public parks, green areas, auditoriums, recreation centres and similar facilities.
(ii) Build and maintain old age homes, orphan shelters, night shelters, rest houses and related institutions.
(iii) Ensure the supply of cooking fuel and milk products.
(iv) Organise cultural activities like exhibitions, sports events, fairs and similar programmes.

(v) Run an affordable public transport service.

(vi) Provide housing facilities.

All these responsibilities of the Municipal Council or the City Corporation make the lives of urban residents easier to a great extent.

India follows a participatory democracy. It needs the active participation of citizens in decision-making and in maintaining good administration at every level of government. Participatory democracy aims to ensure that democracy is a continuous and changing process involving all people, not only during elections but also in the daily working of society. The Municipal Council or the City Corporation carries out its duties and responsibilities effectively. However, it is also our duty as citizens to keep public places clean, throw waste properly, pay taxes on time and obey the rules and laws made for us. We should help protect our resources, avoid damaging public facilities like parks, roads and buildings, and most importantly, take part in community meetings and share problems for better governance. Only then will the real meaning of participatory democracy be achieved.

Analyze Thoughts

- Enumerate the different methods by which you and your companions can contribute to keeping your town tidy and a wholesome place to reside in.
- Write a passage on the public facilities offered by the Municipal Council/City Corporation in your locality.

Decision Making Process of the Corporation

All the decisions that affect the entire town are made by a group of representatives. The ward members put forward the needs of their wards before the full meeting. They discuss and debate the issues in the related committee. After the committees and representatives decide on the matters, the commissioner and other officers implement these decisions.

SOURCES OF INCOME OF THE MUNICIPALITY AND MUNICIPAL CORPORATION

The City Corporation and the Municipal Council collect revenue in the following ways:

(i) Tax on property (this charge makes up 25–30% of the total income of a City Corporation).

(ii) Tax on goods brought into the town, known as octroi.

(iii) Money earned by supplying water and electricity to homes and industries.

(iv) Revenue from public assets.

(v) Motor vehicle tax charged on automobiles, two-wheelers or carts.

(vi) Education tax for learning purposes.

(vii) Charges on trades and professions.

(viii) Entertainment tax collected from cinema halls, auditoriums, circuses and other places.

(ix) Toll charges paid by users of highways and flyovers.

(x) Tax on shop owners and merchants.

(xi) Service fees for giving birth and death certificates.

(xii) Financial help from the state government for providing special services to people directly.

Go Further

A tax is an amount of funds that citizens give to the state for the facilities it offers.

Do you know?

Outsourcing denotes an agreement wherein tasks that were previously carried out by public employees are now undertaken by a private enterprise. For instance, City Commissioners engage external contractors to gather and handle refuse. This practice is adopted to reduce expenses. However, these hired labourers receive lower wages, lack adequate protective arrangements, and their employment is short-term.

The Indore Municipal Corporation (IMC) has been regularly acknowledged as the most hygienic urban area in India under the Swachh Bharat Mission (Clean India Drive) for its eco-friendly refuse management methods and public involvement. It is the wealthiest civic body in Madhya Pradesh with respect to income.

In-Text Questions

Fill in the blanks.

(i) The towns with an inhabitant count exceeding ..... have a City Council.

(ii) The ..... Municipal Corporation, founded in 1688, is the earliest civic body in India.

(iii) The chosen members of the City Council are called the ..... representatives.

(iv) The ..... is the chief of the City Council.

(v) Hygiene is a ..... duty of the City Council.

Analyze Thoughts

Enumerate the duties carried out by the City Council in your town.

Also, describe the manner in which refuse is removed from your locality by the City Council.

IMPORTANT TERMS

- **Transitional:** Moving from one stage to another
- **Municipality:** A town's civic governing authority
- **Incompetent:** Lacking the required skills
- **Nagar Panchayat:** A semi-urban governing body
- **Ward:** A town's administrative subdivision
- **The Municipal Commissioner:** Enforces municipal decisions
- **Councillors:** A local elected representatives
- **Municipal Corporation:** A large city's governing body
- **Inoculation:** Administering a disease-preventive vaccine
- **Dispensaries:** Small local medical centres
- **Crematoria:** Places for body incineration
- **Ex-officio:** By virtue of position
- **Adulteration:** Mixing with inferior elements
- **Orphanages:** Homes for parentless children
- **Participatory Democracy:** A system where people actively make decisions
- **Tax:** A citizen's contribution to government
- **Transparency:** Openness in administrative actions
- **Mahapaur:** A local mayor's title

QUICK TAKE

- In towns and cities, basic facilities are managed by Nagar Panchayats, Municipal Councils and Municipal Corporations.
- The 74th Amendment of 1993 made these three types of local government bodies in urban areas.
- A Nagar Panchayat is set up for areas transitioning from villages into urban communities.
- The population needed to form a Nagar Panchayat varies from state to state in India.
- Nagar Panchayats work for a time of five years before fresh elections happen.
- They manage drinking water, sanitation, health services, drainage, street lights, streets and primary schools.
- A Municipality, also called a Municipal Council, controls smaller towns or growing cities.
- Towns with 20,000 to 10,00,000 people are managed by Municipal Councils.
- Elected members of Municipal Councils are referred to as Councillors or local representatives.
- The 1993 amendment reserved one-third of municipal seats specifically for women candidates.
- Cities with over one million people have Municipal Corporations to manage them well.
- Chennai Municipal Corporation, founded in 1688, is India's oldest municipal corporation.
- Members of a Municipal Corporation choose the Mayor and Deputy Mayor from among themselves.
- The Municipal Commissioner connects the Municipal Corporation with the state government .
- Both Municipal Councils and Municipal Corporations perform similar duties in towns and large cities.
- Main duties include sanitation, health, water supply, education, street lighting, safety and maternity and child welfare.
- Citizens' active participation ensures effective local governance and clear decision-making at all levels.

EXERCISES

I. OBJECTIVE TYPE QUESTIONS

A. Choose the correct answer.

1. The elected members of the Municipal Council are known as _____ .

   (a) Councillors ☐ (b) Village Members ☐

   (c) Ward Representatives ☐ (d) Legislative Assembly Members ☐

2. Which choice accurately lists the three categories of local administrative institutions in urban regions?

   (a) Village Assembly, Village Council and Judicial Council ☐

   (b) Nagar Panchayat, Municipal Council and Municipal Corporation ☐

   (c) Village Council, Block Committee and District Council ☐

   (d) State Assembly, State Council and the Upper House ☐

3. The members of the Municipal Corporation, usually chosen by the Councillors from among respected and famous city workers, are called _____ .

(a) Aldermen ☐ (b) Permanent Representatives ☐

(c) Official Members by Position ☐ (d) None of these ☐

4. The municipalities having populations between 20,000 and 10 lakhs have _____ .

(a) Councils ☐ (b) Municipal Councils ☐

(c) Municipal Corporations ☐ (d) District Councils ☐

5. A Town Council (Nagar Panchayat) is formed for _____ .

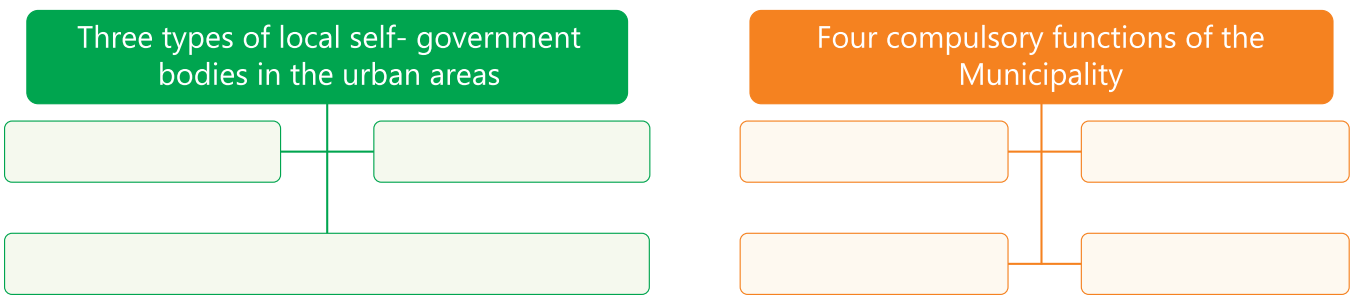
(a) an area shifting from countryside to urban settlement ☐

(b) a cluster of villages ☐

(c) a city zone with inhabitants exceeding 1 lakh ☐

(d) a city zone with inhabitants exceeding 5 lakhs ☐

B. Fill in the blanks.



C. Write 'T' for True or 'F' for False.

1. The Mayor is the head of a Nagar Panchayat. ☐
2. Urban areas with more than one million people have a Municipal Corporation. ☐
3. The 74th Constitutional Amendment was passed in 1995. ☐
4. A Nagar Panchayat has a period of six years. ☐
5. The members of a Municipality are called Councillors. ☐

D. Choose the option that correctly matches items from Column A and B.

Column A	Column B
1. Aldermen	(i) chosen representatives of the Municipality
2. Councillors	(ii) chief of the Municipal Corporation
3. Mayor	(iii) well-experienced and talented civic workers of the town
4. Municipal Commissioner	(iv) a connection between the Municipal Corporation and the state government

(a) 1.-(iii), 2.-(i), 3.-(iv), 4.-(ii) (b) 1.-(iv), 2.-(iii), 3.-(i), 4.-(ii)

(c) 1.-(ii), 2.-(iii), 3.-(i), 4.-(iv) (d) 1.-(iii), 2.-(i), 3.-(ii), 4.-(iv)

E. Assertion-Reason

For questions 1 to 4, two statements are given—one labelled Assertion (A) and the other labelled Reason (R). Read both statements carefully and choose the correct option from the codes (a), (b), (c) and (d) given below:

1. **Assertion (A):** Cities are divided into smaller administrative areas called wards.
   Reason (R): Ward committees handle issues like drainage, cleanliness and public campaigns.
2. **Assertion (A):** A Municipal Corporation exists only in towns with a population below 1 lakh.
   Reason (R): Municipal Corporations are created in large cities with populations above 10 lakh.
3. **Assertion (A):** Citizens have no role in the work of urban local bodies.
   Reason (R): Urban local government depends on citizens' participation, duty and cooperation.
4. **Assertion (A):** Urban local bodies do not collect taxes or fees for their work.
   Reason (R): They collect income through property tax, service charges and trade licenses.

(a) Both Assertion (A) and Reason (R) are true and Reason (R) is the correct explanation of Assertion (A).

(b) Both Assertion (A) and Reason (R) are true but Reason (R) is not the correct explanation of Assertion (A).

(c) Assertion (A) is true but Reason (R) is false.

(d) Assertion (A) is false but Reason (R) is true.

II. SHORT ANSWER TYPE QUESTIONS

1. Explain the role of a municipal representative.
2. Make a list of the sources of income of a Nagar Panchayat.
3. Explain the meaning of a Municipality.
4. Write the functions of a Nagar Panchayat.
5. Mention the points of the Seventy-fourth Constitutional Amendment Act, 1992.

III. LONG ANSWER TYPE QUESTIONS

1. Describe the different duties performed by a Municipal Corporation.
2. Write a short description about the Municipality.
3. Write a short description about the Municipal Corporation.

IV. DISTINGUISH BETWEEN THE FOLLOWING

1. Nagar Panchayat and Municipal Council
2. Municipal Council and City Corporation

V. PICTURE STUDY

Look at the picture carefully and answer the following questions based on it.

1. What activity is being done at the vaccination centre?
2. Which diseases can be stopped by vaccination?
3. Who is responsible for arranging such health services in urban areas?
4. Why is vaccination important for children and adults?

VI. SOURCE BASED QUESTIONS

Read the given passage and answer the following questions.

Local self-government in India is divided into three levels based on the size and population of urban areas: Town Panchayat (Nagar Panchayat) for areas changing from rural to urban, Municipal Council for medium towns and Municipal Corporation for big cities. Each body has elected members, appointed officers and special duties like sanitation, water supply, education and city planning. Their structure, duties and income sources are different, but all work to provide better administration and encourage people's participation in government. The 74th Constitutional Amendment made these institutions stronger by keeping seats for women and supporting democratic local governance.

1. Why does India have different local bodies (Town Panchayat, Municipal Council, Municipal Corporation)?
   (a) Complicate governance ☐ (b) Match area/population needs ☐
   (c) Decrease citizen participation ☐ (d) Avoid services ☐
2. What is a challenge for a Municipal Corporation compared to a Municipal Council?
   (a) Needing less money ☐ (b) Managing larger populations/services ☐
   (c) Avoid citizen participation ☐ (d) Fewer responsibilities ☐
3. Impact of reserving seats for women in local bodies (74th Amendment).
   (a) Stops participation ☐ (b) Increases representation and diversity ☐
   (c) Makes democracy weaker ☐ (d) Reduces efficiency ☐
4. Why is citizen participation important?
   (a) Slows governance ☐ (b) Reduces responsibility ☐
   (c) Avoids duties ☐ (d) Reflects community needs ☐

Case Study of a Local Problem

- Identify one urban issue (e.g., traffic jams, waste management or water shortage).
- Research how the local government addresses it.
- Present solutions through a short project file or presentation.

THEME–E

Economic Life Around Us

Every day, we see people engaged in different activities that help meet our needs and improve our lives. From farmers growing food and workers making useful products to people providing services, each contribution has its own importance. These activities connect people and communities, creating a system where goods and services are exchanged. Understanding how people use their skills, resources, and efforts helps us appreciate the role everyone plays in society. By exploring the world around us, we learn how choices, cooperation, and responsible actions shape our lives and support the growth and development of our communities.

13 The Value of Work

Let's Learn About

- Economic Activities
- Types of Economic Activities
- Non-Economic Activities
- The Importance of Non-Economic Activities

Let's Gear Up

Mukesh lived in a small village where his father worked hard on the farm every day. One summer, Mukesh said farming was hard and wished for an easy life. His father smiled and told him to water the plants for a week. At first, Mukesh felt bored, but soon he saw the plants grow green because of his care. He learned that every small effort was important. On harvest day, Mukesh happily shared the crops with his family too.

Street Vendor

In India, there are around ten million street sellers. Sometimes, they sell products, repair things or provide services. They are not employed by any boss but work on their own. Therefore, they have to plan their own work. They decide what to sell, how much stock to buy, where to get it and how to set up their stalls. Their stalls are usually temporary arrangements.

The produce sellers usually rely on their own trolleys. At times, they just lay out a polyethylene sheet on the sidewalk. Their makeshift stalls lack safety. They may be taken down at any moment by the authorities. In some areas of the town, the peddlers are not even permitted to access.

Many street sellers provide food items like snacks and drinks. They usually make these at their homes with help from their families.

Every morning, Lalu, a street seller, places items like potatoes, tomatoes, gourds, cucumbers and more in different baskets at his stall. He uses bicycle carts to carry the vegetables and deliver them to homes. His daily income is usually between 100–150. Earlier, street selling was seen as a problem for traffic movement and people walking. However it is now accepted as a common benefit and a basic right for people to earn their living. Many think that street sellers should be allowed to move freely and that special vending areas should be created for them in city

A street vendor-vegetable seller

areas for their work.

A domestic servant

Domestic Servant

Some people in big cities earn their means of living by working as household helpers. Rupa works as a domestic aide in a rich area of Delhi. She moved from Uttar Pradesh with her husband seven years ago. Her work includes washing dishes, cleaning clothes, sweeping and mopping floors. She gets 2,500 per month as payment. Her husband collects waste metal from houses and sells it to an industrial unit. They live in a slum settlement on the outskirts of the city.

A Fishing Family

Balbhadrapur is a small village in Bihar. It has many fishing families. Pritam wakes up at 4 a.m. and goes to the nearby Kamala river for fishing. He comes back around 8 a.m. with his fish. He keeps some fish for his family and sells the remaining fish through auction. He saves one-fourth of the money earned for tools like boats, nets and other needed things. Recently, he got a bank loan to buy an engine for his boat so that he can catch more fish.

Fishing

In the afternoon, Pritam and his family members gather to repair their nets. Some women from the village buy fish from them and carry it in baskets to sell in nearby villages. Every year in the rainy season, these fishermen stop going to the river for fishing because this is the time when fish breed. During these months, they survive by taking loans from traders. In return, they have to sell fish to traders at lower prices than the market price.

Women selling fish

Garment Factory Worker

Kishan works as a tailor in a clothing factory that exports clothes. He is a temporary worker. The factory where he works makes winter clothes for people living in other countries like Russia, the USA, the UK, Saudi Arabia. He goes to work in a crowded bus. For many months in a year, he has to work for long hours. His usual workday begins at 9 in the morning and ends at about 9 at night. Sometimes, he has to stay and work for more time. He works six days every week. When the factory owner gets large orders, Kishan also has to work on Sundays. He gets 80 per day for eight hours of work and an extra 40 for overtime. During the slow season, the factory reduces the number of workers. For about three to four months every year, Kishan has no job

Workers in a garment factory

because there is no work for him in the factory. He then looks for other work. Kishan also likes helping society. He takes part in cleanliness drives, tree planting activities and other cultural programs held by the community.

BANK EMPLOYEE

Radha works in a bank. She goes to her office from 9:30 a.m. to 5:30 p.m. She gets ₹50,000 as a fixed monthly salary. Along with her salary, she receives extra benefits and allowances. She does not go to the office on Sunday, as it is paid holiday. When she joined, she received an appointment letter that explained all the rules and service conditions. She has the security of a stable job.

Bank employees

She gets facilities like clean drinking water and a safe working environment. In the evenings, Radha teaches the child of her housemaid and helps her learn English and Science. For this work, Radha does not take any money from her maid.

Teacher

Seema works as a teacher in a school. Her classes begin at 7:00 a.m. and end by 1:30 p.m. She gets a fixed salary for her job as a teacher. After reaching home, she makes lunch for her family, washes clothes, helps her children with their homework, waters plants in her small garden, goes to the market to buy things needed for the next day, cooks dinner and finally cleans the utensils for the next morning. She does a lot of household work throughout the day, but she is not paid for this work.

Teacher in a classroom

You are likely familiar with the work done by people in the earlier examples such as selling vegetables, catching fish, working in an industrial unit or financial institution and teaching students. Apart from these, people are also involved in jobs like growing crops, driving vehicles, making cloth, sewing clothes and so on. Some people work as clay workers, doctors, helpers, technicians, scientists, defense personnel, police officers and others.

Analyze Thoughts

Consider two additional income-generating occupations that are carried out in your local environment but are not listed above.

All the earlier mentioned tasks are usually divided into two groups: earning jobs and non-earning jobs.

ECONOMIC ACTIVITIES

Income-based occupations are jobs done to earn money and support life. They involve making, sharing and using goods and services. For example, a roadside vegetable seller, a home helper working for pay, a fisherman selling fish, a factory worker making clothes, a bank employee, and a teacher using their skills to earn wages are all examples of income-based work that help people earn money.

NON-ECONOMIC ACTIVITIES

Non-income tasks are done not for money but for personal happiness or because of thanks, love, care or helping the community. In the earlier examples, you learned that Kishan takes part in cleaning drives, tree planting activities and other cultural programs held by the society. Radha teaches the child of her house helper and helps her learn English and Science, while Seema cooks food for her family, washes clothes, helps her children in studies, waters plants and does more work. Kishan, Radha and Seema do these activities for their own happiness, love for their family members or to help society. They do not get any money or wages for these efforts.

Analyze Thoughts

Consider a few additional non-income tasks that your relatives perform for you. In what ways are these different from income-oriented occupations?

Women cooking at home

Helping children with homework

Watering the plants

A man planting trees

TYPES OF ECONOMIC ACTIVITIES

Each day, the village of Sundarpur is busy with many activities in the morning hours. Along with the sounds of birds, the noise of people going to work and children leaving for school creates a lively feeling in the village. People do different earning jobs and help increase the growth and well-being of the community.

A farmer field

Landless labourers working in fields

Suraj is a farmer. His daily work starts in the fields. He grows rice, wheat, cotton and vegetables which he supplies to the whole community. He does not get a fixed salary but earns money when he sells his crops and farm products in the market. People give him money for his crops. There are many other farmers like Suraj in the village who own their own pieces of land. However, most other people working in farming are landless labourers who work in the fields of rich farmers to earn their living. Their work is not fixed and they get daily wages after working the

whole day in the fields. They lose their jobs when there is not enough work available on the farms.

Asha runs a small shop in the village where she sells daily use items, food products, school materials, toys and more. Because of this shop, villagers get most of their needs within the village itself. She has hired a helper to assist her in the shop. Also, Asha offers services like money transfers and deliveries to distant villages, for which she charges fees from her customers.

A general store in village

A textile factory

A little distance away from the provision shop, Anil and his family run a small cloth-making unit. They buy cotton from Suraj's fields and turn it into cloth. In their workshop, people use machines to weave fabric, which they sell in markets of nearby towns.

Aman runs a computer centre in the village. He has knowledge of computers and teaches some students from the community, for which he takes a small fee. The children of landless workers do not give money but bring milk, farm vegetables and fruits to Aman. The milk, goods and fruits that Aman gets instead of money for teaching are called payment in kind.

Deepali works as a teacher in the government school, while Anu works as a doctor in the village health centre. Both of them have fixed working hours and get a regular salary for their services. In the evenings, Deepali and Anu also teach the children of the community privately, for which they do not take any money.

A computer centre

A doctor in the village

A teacher in the village

Construction with big machines

The local government decided to build a road connecting the village to the nearby town. Therefore, many construction workers are now present in the village operating heavy machines such as cranes, bulldozers and diggers. This road will be very helpful for the community as it will make the movement of people and goods from the village to other towns easier.

In-Text Questions

State whether True or False

1. The stalls of roadside sellers are makeshift.
2. Income-related occupations are those tasks carried out to sustain a living.
3. Income-oriented work does not include creation or usage of goods and services.
4. Tasks performed out of affection and regard are an instance of income-related activity.
5. Instructing someone for payment is a non-income task.

Value Addition

In the earlier story about the village Sundarpur, people observed residents taking part in many different livelihood activities, while every occupation has monetary value. Wealth creation through livelihood activities means a process of increasing the usefulness or importance of goods during stages like creation, movement or usage. Making goods more attractive increases earnings, usefulness, and demand together. Worth enhancement happens whenever an entrepreneur buys basic materials, then improves them through changing, cleaning or processing, finally providing products that serve buyers better and bring higher returns.

Manuscript

As we now understand, economic activities are those that have value measured in terms of money. Economic activities also increase value at every stage of the process of changing something into another form. This is known as value addition.

THE IMPORTANCE OF NON-ECONOMIC ACTIVITIES

Even though non-economic activities do not involve money, they are important for our mental health and the growth of society. They focus on our social, cultural, educational, recreational and personal development, and therefore help build our complete personality.

Analyze Thoughts

Identify certain tasks that are carried out in your environment.

Classify them into income-related and non-income.

Describe how certain tasks you listed enhance your living or generate income.

Non-economic tasks include social activities like helping the community, meeting people, attending gatherings and more. You may have seen "Seva" or selfless service in temples, gurudwaras, mosques and churches, where people willingly join cleaning drives, arrange the footwear of visitors and distribute food to people through langars or common kitchens. These helpers do not receive any money for their help, but they feel happiness and satisfaction from their work. In the earlier examples, Deepali and Anu were doing selfless service by teaching children without taking any fees.

Langars in Gurudwara

Reading

Writing

Celebrating festivals

Drawing

Unpaid activities also include cultural practices such as celebrating festivals, joining shows, concerts and plays, visiting museums; Educational activities involving reading, writing, research, attending training programs and skill development; Leisure activities supporting hobbies, playing sports, watching movies, listening to music; and personal growth activities including drawing, painting, doing pranayama, meditation and cycling. Every mentioned activity gives people satisfaction, peace, happiness, and also helps build personality. Such activities reduce stress, improve relationships among family members and society, protect religious traditions, and promote personal happiness and health. Psychological and intellectual balance gained through unpaid activities improves efficiency, creating greater value in income-linked activities, as motivation increases effort, focus, strength, creativity, cooperation, learning, attitudes, behaviour, resilience, harmony, lifestyle, outlook, satisfaction, confidence, health, balance, meaning, purpose, growth, happiness, performance, contribution, prosperity, progress, achievement, development, wholeness.

Yoga and Meditation

Cycling

Gardening

Collective involvement is a vital part of growth and decision-making systems. It allows citizens to share their views and ensures different needs of neighbourhood groups are considered. Locally guided initiatives receive support from most residents and create steady, lasting, meaningful results. Such efforts also strengthen relationships and build trust among neighbours. Neighbourhood cleanliness activities, shared garden areas, local health actions, public art projects, youth support plans, learning sessions show Collective involvement.

Ek Ped Maa Ke Naam

The latest "Ek Ped Maa Ke Naam" movement is a caring action that honors motherhood through sapling dedication while supporting nature protection and long-term balance. This local effort encourages participation from all residents and teaches them about eco-friendly surroundings. The drive also shares

Swachh Bharat Abhiyan

knowledge about the benefits of planting and protecting trees. Therefore, plantation events happen where people gather to plant saplings in chosen places to honor mothers or loved family members. Each sapling represents a mother and has a simple label showing her name. The mission also focuses on caring for saplings to ensure growth and survival. Beyond memory this drive brings citizens together creating unity and environmental responsibility.

Joint Forest Management

Analyze Thoughts

Describe a community-based program conducted in your locality. What activities were carried out, what results were achieved and what was your role or experience in the program?

Go Further

Van Mahotsav is a community-driven tree plantation festival celebrated across India, usually in the first week of July. It was initiated in 1950 by K. M. Munshi, the then Union Minister for Agriculture and Food. The primary objective of Van Mahotsav is to spread awareness about the importance of trees and to promote afforestation as a means to combat deforestation and environmental degradation.
During this program, various activities such as tree plantation drives, awareness campaigns, forest and water conservation initiatives and promotion of organic farming are carried out. These activities help educate people about the vital role trees play in maintaining ecological balance and supporting life on Earth. Van Mahotsav brings together people of all age groups, encouraging collective responsibility toward environmental protection and sustainable development.

IMPORTANT TERMS

- **Barrier:** Obstacle that prevents progress
- **Financial Tasks:** Income generating work activities
- **Non Financial Tasks:** Activities done without payment
- **Independent Worker:** Self employed individual managing work
- **Compensation in Goods:** Payment received as goods
- **Per Day Pay:** Wages earned for one day
- **Temporary Worker:** Short term or seasonal employee
- **Worth Enhancement:** Process of increasing product value
- **Collective Involvement:** Community participation in shared activities

- **Reforestation:** Planting trees to restore forests
- **Eco friendly:** Environment safe and sustainable practices
- **Means of Living:** Way to earn daily necessities
- **Societal Bonding:** Building strong community relationships

QUICK TAKE

- Income-earning activities include farming, selling products, fishing and working in offices, factories or other institutions.
- These activities involve making goods, providing services and using products to meet people's needs.
- Non-income activities are done for joy, moral responsibility or traditions, such as caring for family members or helping others.
- These activities develop personality by encouraging cultural growth, education, recreation, relationships and personal improvement.
- Value addition means increasing the usefulness and cost of a product during processing, such as changing pulp into a printed book.
- Group involvement means people joining together for common goals, such as cleanliness drives or protecting nature, building unity and sustainability.
- Community-based efforts receive greater support, creating reliable, lasting and successful results for all people involved.

I. OBJECTIVE TYPE QUESTIONS

A. Choose the correct answer.

1. Joint Woodland Management (JWM) focuses on _____.
   (a) Setting up industries ☐ (b) Preserving forests ☐
   (c) Selling timber ☐ (d) Increasing mining ☐
2. Which of the following is an example of an earning activity?
   (a) Making lunch ☐ (b) Selling vegetables ☐
   (c) Helping a child ☐ (d) Caring for the sick ☐
3. Non-financial undertakings are carried out to _____.
   (a) Achieve personal satisfaction ☐ (b) Earn a living ☐
   (c) Make a profit ☐ (d) Produce goods ☐
4. Which of the following is an example of group involvement?
   (a) Selling stationery ☐ (b) Cooking alone ☐
   (c) Cleaning together ☐ (d) Cleaning alone ☐

5. Value addition in earning activities means _____.

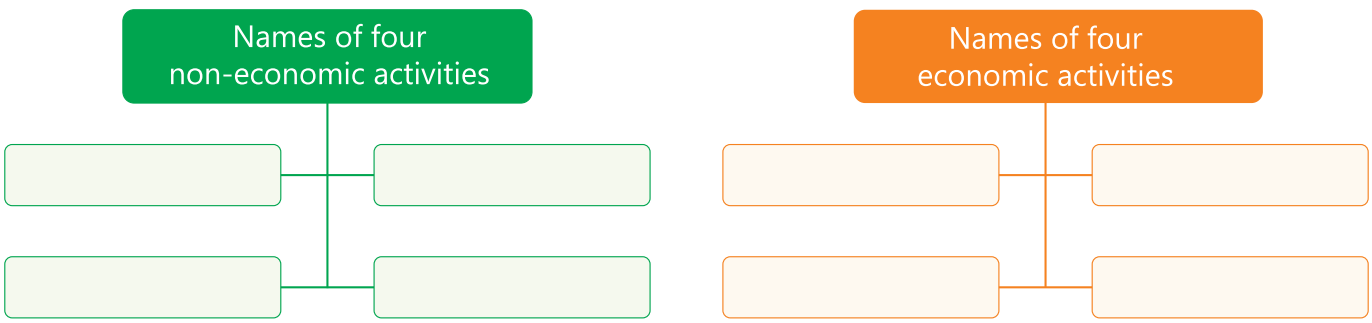
(a) Increasing cost ☐ (b) Reducing value ☐

(c) Lowering cost ☐ (d) Raising value ☐

B. Write 'T' for True or 'F' for False.

1. Collective services are earning activities. ☐
2. Collective involvement weakens social bonds among people. ☐
3. Bank workers and teachers do not receive any salary for their work. ☐
4. Value addition makes a product more attractive. ☐
5. Fishing families have jobs throughout the year. ☐

C. Fill in the blanks.



D. Choose the option that correctly matches items from Column A and B.

Column A	Column B
1. Non-financial undertakings	(i) Making an item more precious at each phase
2. Financial task	(ii) Joint Woodland Management (JWM)
3. Value addition	(iii) Securing a living by vending goods
4. Collective involvement	(iv) Personal contentment

(a) 1.-(iii), 2.-(i), 3.-(iv), 4.-(ii) (b) 1.-(iv), 2.-(iii), 3.-(i), 4.-(ii)

(c) 1.-(ii), 2.-(iv), 3.-(i), 4.-(iii) (d) 1.-(iv), 2.-(i), 3.-(ii), 4.-(iii)

E. Assertion-Reason

Read the following statements carefully. For each question, an Assertion (A) and a Reason (R) are given. Choose the correct option from the codes below:

1. **Assertion (A):** Cooking meals for the family is a non-economic activity.
   Reason (R): It builds love and care among family members.
2. **Assertion (A):** Street vendors are an important part of the urban economy.
   Reason (R): Street vendors give goods and services to people at low prices.
3. **Assertion (A):** Watering plants in a home garden is a non-economic activity.
   Reason (R): Teaching without charging fees is an economic activity.

4. **Assertion (A):** The Swachh Bharat Abhiyan works for a cleaner and healthier India.
   Reason (R): People do not show any interest in the program.

(a) Both Assertion (A) and Reason (R) are true and Reason (R) is the correct explanation of Assertion (A).

(b) Both Assertion (A) and Reason (R) are true but Reason (R) is not the correct explanation of Assertion (A).

(c) Assertion (A) is true but Reason (R) is false.

(d) Assertion (A) is false but Reason (R) is true.

II. SHORT ANSWER TYPE QUESTIONS

1. Explain the importance of Value addition.
2. Differentiate between economic and non-economic activities.
3. Describe earning activities.
4. Explain the role of collective involvement in development.
5. Give two examples of non-financial activities.

III. LONG ANSWER TYPE QUESTIONS

1. Explain the importance of non-economic activities in personal growth and social welfare.
2. What are the different ways people receive payment for different economic activities? Give some examples.

IV. PICTURE STUDY

Children and adults are planting trees together in a park, with small name boards on each tree that say "For Mother" (showing the Ek Ped Maa Ke Naam movement).

Look at the picture carefully:

1. Why are people planting trees together?
2. How does this activity respect mothers?
3. What benefit does planting trees give to the environment?

V. SOURCE BASED QUESTIONS

Read the given paragraph and answer the following questions.

Non-economic activities, although not connected with money, are important for building our personality and making communities stronger. They include cultural events, learning activities, hobbies and helpful services like "Seva" at religious places. These activities provide happiness, lower stress, protect traditions and improve emotional health. Group participation in activities like Ek Ped Maa Ke Naam, Swachh Bharat Abhiyan and Joint Woodland Management shows how people can work together for social, environmental and cultural development. These efforts improve nature and public health while also developing cooperation, responsibility and long-term sustainability.

1. Why are non-economic activities like cultural events and Seva important for communities?

   (a) Earn money ☐ (b) Reduce education ☐

   (c) Replace economy ☐ (d) Build relationships ☐

2. What common value is encouraged by activities like Swachh Bharat Abhiyan and Joint Forest Management?

   (a) Individual competition ☐ (b) Ignore environment ☐

(c) Community responsibility ☐ (d) Personal wealth ☐

3. How do hobbies help in personal growth?
   (a) Increasing stress ☐ (b) Avoiding meeting people ☐
   (c) Improving emotional health ☐ (d) Reducing creativity ☐
4. What long-term benefit comes from group participation in environmental activities like Ek Ped Maa Ke Naam?
   (a) Money gain ☐ (b) Sustainability ☐
   (c) Short-term fun ☐ (d) Less responsibility ☐

- **Community Helpers Interview:** Students interview a farmer, shopkeeper or sanitation worker to understand their daily work and its importance.
- **Role Play on Occupations:** Groups role play different professions (teacher, doctor, carpenter, farmer) to highlight dignity in all kinds of work.
- **Family Chores Journal:** Each student keeps a weekly log of household tasks they do, reflecting on how small contributions matter.
- **Poster Making on Hard Work:** Create posters showing how effort leads to success.
- **Story Collection:** Gather short stories or folk tales from elders that emphasize the value of honest work.
- **School Garden Project:** Students collectively plant and care for a small patch, learning teamwork and responsibility.

14 Economic Activities Around Us

Let's Learn About

- The Classification of Economic Activities into Economic Sectors
- Interdependence Among Sectors

Let's Gear Up

Rina lives in a village where her family grows vegetables. Every morning, she helps her father water the plants and collect fresh crops. Her mother carries the vegetables to the weekly market, while her brother sells pickles and jams prepared at home. During holidays, Rina visits her aunt's tailoring shop, where clothes are stitched and fixed. She notices that farmers, tailors, sellers and even drivers who transport goods are all involved in different kinds of work.

In this section, we will mainly study the different types of economic activities and their classification.

THE CLASSIFICATION OF ECONOMIC ACTIVITIES INTO ECONOMIC SECTORS

There are many economic activities linked to the making, supply and use of goods and services. Activities having similar features are placed into different industrial divisions.

The three basic types of economic sectors are: Primary (Basic), Secondary (Middle) and Service-based (Tertiary).

Classification of Economic Activities into Economic Sectors

Primary Economic Sector	Secondary Economic Sector	Tertiary Economic Sector
Agriculture	Construction	Banking
Mining	Water Supply	Communication
 Forestry	Manufacturing	Transportation
Fishing	Solar power	Healthcare

Primary Activities

These tasks are closely linked to the collection and production of natural resources from the Earth. In these tasks, people directly depend on nature for the production of goods, so they are also called Fundamental division financial tasks. For example, growing wheat is a fundamental task because we depend on natural factors like soil, rainfall, sunlight, and climate for farming. In the same way, getting milk, meat, wool, and eggs from farm animals; taking out coal, petroleum, and minerals from mines; catching fish and other seafood from seas, rivers, and ponds, collecting timber and other forest products from forests; and growing fruits, crops, and flowers are all examples of primary economic activities.

"Milk production, fishing, raising animals, farming, forestry, and mining are the most common primary activities. These activities provide the base for other sectors because they supply raw materials to them. They help build the foundation of a country's economy. Since this sector mainly includes farming, milk production, fishing, and forestry, it is also called the 'agriculture and related sector."

Analyze Thoughts

Think of any two primary activities you have seen or interview any person engaged in primary activities. Ask him to explain his work and challenges in primary sector activities.

Greenhouse farming

Forestry

Dairy farming

Raising livestock

Do you know?

"In developing nations, a considerable share of the inhabitants is involved in primary activities particularly farming. As per the Periodic Labour Force Survey (PLFS), in 2022-23, nearly 45.76% of India's overall labour group was occupied in farming and connected sectors. In 2022, the count of workers in the farming division was above 158 million, which was the greatest in recent times."

Secondary Activities

The tasks related to processing and making raw materials from the primary sector into finished or partly finished products are called secondary activities or secondary economic activities.

Manufacturing, construction, processing, and production are all secondary economic activities. For example, making cars, electronic goods, home appliances, and machines; building roads, bridges, buildings, shopping malls, and houses; and providing services like water, gas, and electricity to homes and factories are all secondary economic activities. They also include changing raw materials like fruits and vegetables into packaged food and drinks, cotton or wool into cloth and clothes, and natural resources like coal, petroleum, and natural gas into electricity or refined fuels, as well as turning iron ore into steel used for construction and manufacturing. Other examples of secondary activities

Go Further

The Industrial Revolution (late eighteenth and nineteenth eras) altered secondary sector by bringing in large-scale fabrication and equipment, boosting efficiency and the worldwide expansion of enterprises.

Electricity production

include making chemicals, medicines, fertilizers, and plastics, along with processing metals and chemicals into useful products such as tools, electronic parts, and building materials.

Trade and logistics

Automobile factory

Pharmaceutical factory

This sector is important for the economy because it adds value to raw materials by changing them into useful products. This sector provides many job opportunities for people, from unskilled workers to skilled experts and managers. It uses the skills and knowledge of workers along with machines to turn raw materials into finished or partly finished products. Since this sector includes different industries, it is also called the "manufacturing sector".

Textile factory

Tertiary Activities

The tasks that support the work of the primary and secondary sectors by improving efficiency through services are called tertiary activities or tertiary economic activities. This sector is not involved in production but provides services to both the primary and secondary sectors. These services are important for the production, transport, and use of goods. Therefore, this sector gives support to businesses, people, and society as a whole.

Every day you see vegetable sellers bringing fruits and vegetables to your doorstep, truck drivers carrying goods from one place to another, and your teachers, doctors, and nurses doing their work well. All these are examples of tertiary economic activities.

Other significant tertiary sector tasks that deliver amenities and simplify our lives are vending products to buyers by retailers; shifting products, papers and persons by roadways, airways and waterways; monetary support, investments, deposit accounts and additional amenities by banks; healthcare by physicians and caretakers; learning and career instruction by academies, institutes and universities; excursions and travel bundles by trip organizers; legal

Do you know?

"In advanced nations, the tertiary sector provides the greatest portion to the gross domestic product. For instance, in the USA, the service sector makes up over 75% of the economy."

Analyze Thoughts

Your teacher's occupation also falls within the tertiary sector. You might have noticed your instructors carrying out a range of duties that assist them in educating you efficiently. Compose a short description on the numerous duties your teachers undertake in school.

guidance by advocates; supplying telecommunication, internet and data amenities, call centers; offering vehicle maintenance, household maintenance and electronic maintenance amenities; amusement through television, radio and other channels; amenities provided by shoemakers, hairdressers, launderers and others.

Do you know?

In developed countries, the service sector gives the largest share to GDP. For example, in the United States, the service sector contributes over 75% of the economy.

The Tertiary sector acts as a link between the Primary and Secondary sectors. For example, it helps in transporting raw materials from farms to factories and then carries finished products from factories to markets for sale. Since this division provides services instead of goods to both the Primary and Secondary sectors, it is also known as the "Service sector".

The following chart shows the three economic divisions and the activities related to them.

Economic Sector	Description	Examples
Primary Activities	Directly connected to collecting and producing raw materials from nature. These activities depend on natural resources like soil, water, and minerals.	Farming, dairy farming, fishing, forestry, mining.
Secondary Activities	Concern the processing and making of raw materials into finished or partly finished goods. This division adds value to raw materials by changing them into useful products.	Making of cars, building of houses, roads and bridges, production of electricity, making of clothes, and changing iron ore into steel.
Tertiary Activities	Focus on providing services that support both Fundamental and Intermediate divisions. This division includes activities that help in the supply, transport, and selling of goods.	Banking, shopping, trade, transport, health, education, communication, travel, insurance, legal, support, entertainment.

In-Text Questions

State whether True or False.

1. Breeding animals is a fundamental division task.
2. Intermediate division is also termed the "Farming Division".
3. Delivering amenities belongs to the third level division.
4. Intermediate division involves creation through equipment in plants.
5. Making sugar from sugarcane belongs to the fundamental division task.

INTERDEPENDENCE AMONG SECTORS

All three economic sectors depend on and are connected with each other. The Primary sector provides raw materials to the Secondary sector, which changes these raw materials into finished goods. The Tertiary sector supports the production and supply of these goods by providing important services.

Let us understand the connection between the three divisions by studying the production of milk and milk products in the AMUL (Anand Milk Union Limited) dairy located in the Anand district of Gujarat. You all must have heard about the brand name Amul and bought its products. It includes items like milk, butter, ice cream, and sweets. Amul, a brand of the Gujarat Co-operative Milk Marketing Federation (GCMMF), has a long history of how a co-operative movement changed India's dairy industry and the lives of many farmers.

Amul dairy in Mogar, Gujarat

Origin

The story of Amul began in the 1940s, when farmers of Anand area opposed unfair treatment by brokers and private traders. The farmers walked or rode cycles to nearby villages to sell their milk. By the time they reached those villages, the milk spoiled quickly, especially during hot summers. This created problems for farmers and they earned very low income. These conditions forced them to sell their milk to brokers and private traders who bought it at very low prices and sold it in markets at higher prices. The condition of the villagers remained the same because they had no power to bargain for better deals too.

Fed up with this unfair treatment, the farmers went to Sardar Vallabhbhai Patel, a respected national leader, one day for a solution. Sardar Patel suggested that the farmers form a group and remove brokers. This would help farmers manage milk collection, processing and selling their own.

Sardar Vallabhbhai Patel

The Co-operative

In 1946, the farmers joined together to create a group—the Kaira District Cooperative Milk Producers' Union Limited under the strong guidance of Sardar Vallabhbhai Patel, Tribhuvandas Kishibhai Patel, Morarji Desai and later Dr. Verghese Kurien. The main aim of this group was to remove brokers and control milk prices and supply. The group, which began with only two village dairy groups and 247 litres of milk, is today famous as the brand Amul.

Morarji Desai

After forming the cooperative, the farmers became owners of the dairy. They made their own rules and plans for producing, processing and supplying milk. The different tasks were shared by everyone, which removed the need for brokers. The farmers hired experts to manage the dairy and look after different parts of the business. The cooperatives also selected their representatives who guided the village groups and district unions.

Dr. Verghese Kurien

Tribhuvandas Kishibhai Patel

The cooperatives understood the problems and needs of farmers and gave them proper solutions. All these efforts slowly helped in increasing the earnings and income of farmers.

Role of Dr. Verghese Kurien

A young dairy engineer, Dr. Kurien joined Amul in 1949. He is also known as the 'Milkman of India'. He introduced modern machines and management methods to help India become self-reliant in milk production. He used the latest processing methods for milk and milk products at Amul. Because of his efforts, Amul became the first modern dairy cooperative in Anand that could compete with other well-known milk businesses in the market. Kurien is famous for leading India's White Revolution that changed India into the world's largest producer of milk.

Verghese Kurien (left) and Tribhuvandas Patel (right)

The Birth of Amul and Expansion

The name 'Amul' comes from the Sanskrit word 'Amulya,' which means 'priceless' or 'valuable'. The brand Amul was started in 1955 with the launch of processed milk and butter products.

Pakaged milk

Cows grazing grass at dairy farm

In 1965, the National Dairy Development Board (NDDB) was created with Dr. Kurien as its chairman. In the 1970s, a national dairy development program was started under the guidance of Dr. Kurien. known as Operation Flood, the program aimed to increase milk production, create a national milk network and provide fair prices to farmers. Amul played an important role in the success of Operation Flood.

Pakaging Production

Packaged milk

The activities that support the primary and secondary sectors by improving efficiency through services are called tertiary activities or tertiary sector economic activities. This sector does not produce goods

but provides services to both primary and secondary sectors. These services are important for the production, distribution and use of goods. Therefore, this sector gives support to businesses, people and society as a whole.

Transportation

Amul dairy products

Amul products in retail stores

Amul is now a national brand with its products available in almost all rural and urban areas. It also sends its products to international markets.

Go Further

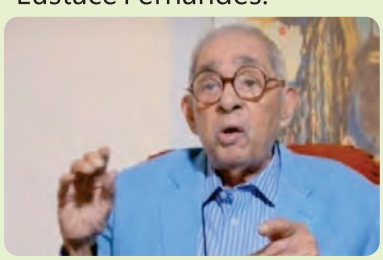
The White Revolution in India, likewise referred to as Operation Flood, was a campaign initiated in 1970 by the National Dairy Development Board (NDDB). Directed by Dr. Verghese Kurien, it reshaped India from a milk-scarce country into the globe's biggest milk maker.

Do you know?

The Amul Girl

You might have noticed a joyful, circular-faced girl attired in a spotted gown in the promotions of Amul. The Amul Girl was designed in 1966 by the publicity firm daCunha Communications, guided by Sylvester daCunha and creative head Eustace Fernandes.

Amul Girl



Sylvester daCunha

The Amul promotions showcasing the Amul Girl are identified as Amul Topical Ads. Every promotion carries a brief, striking catchphrase together with a sketch of the Amul Girl in varied situations linked to the subject. The subjects may be governmental, communal, athletic occasions or everyday incidents. The Amul Girl has turned into a segment of Indian popular culture, visible on hoardings, in journals and across online platforms.

The success of Amul led to the creation of many cooperatives in different areas of India, the most important being the following.

- Mother Creamery (National Creamery Advancement Board),Delhi–National Capital Region
- Aavin (Tamil Nadu Co-operative Milk Producers Federation), Tamil Nadu"
- Saras (Rajasthan Cooperative Dairy Federation – RCDF), Rajasthan
- Sudha (Bihar State Co-operative Milk Producers Federation – COMFED), Bihar

- Nandini (Karnataka Co-operative Milk Producers' Federation – KMF), Karnataka

- Vijaya (Andhra Pradesh Dairy Development Co-operative Federation-APDCF), Andhra Pradesh

- Parag (Pradeshik Co-operative Dairy Federation-PCD), Uttar Pradesh

In the story of Amul, we can now see the involvement of all three economic sectors. The farmers collect milk from cattle, which is a natural resource. Therefore, this activity belongs to the primary sector.

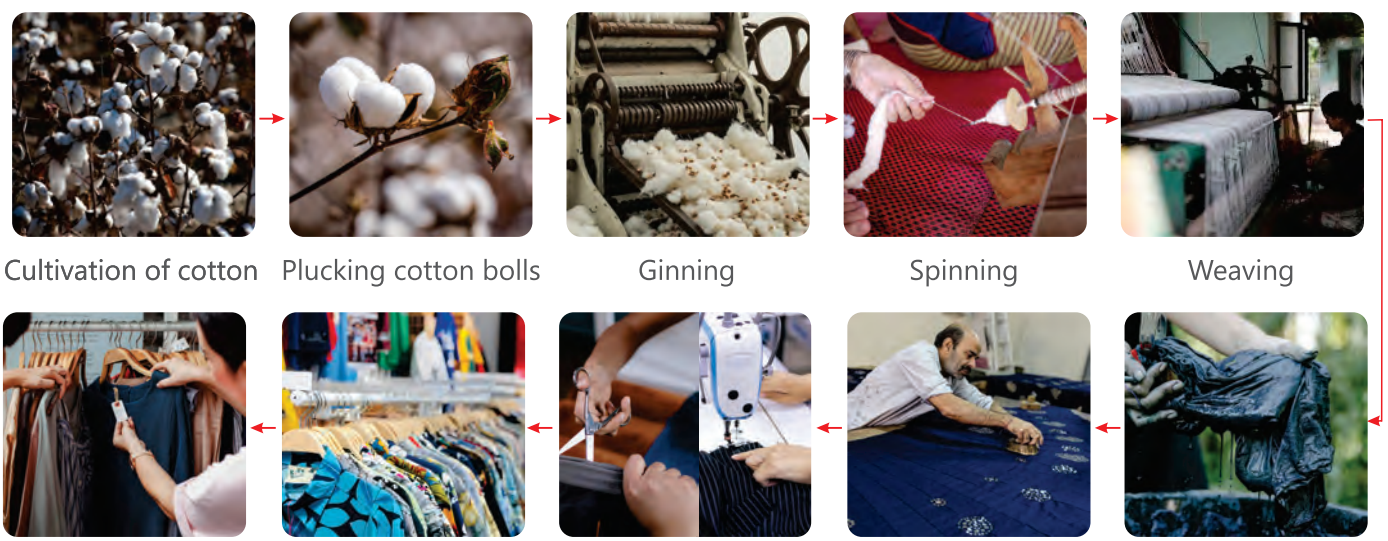
The milk is then taken to factories and industries where it is processed and cleaned using machines and human skills to make different products like curd, cheese, butter, ice cream, milk powder, yogurt etc. All these activities belong to secondary sector economic activities.

The different products made for use are later transported through roads, railways, airways and waterways to different countries, states, cities and villages. They are then supplied to Amul shops, other stores, supermarkets and markets to be bought by customers. All activities of transport, trade and selling belong to tertiary sector economic activities.

With the help of pictures, let us understand the connection between all three economic sectors in making a cloth from cotton. Describe the different activities and group them into the three economic sectors.

Analyze Thoughts

Choose any edible item such as sugar or a loaf of bread. Examine the procedure of its creation, handling and delivery and explain the mutual reliance of the three economic sectors in your classroom.



From fibre to fabric

In-Text Questions

Fill in the blanks.

1. Amul dairy is positioned in ..... of the state of Gujarat.
2. The title "Amul" has been taken from the Sanskrit term ..... .
3. ..... is renowned as the Milkman of India.
4. Mother dairy is established in ..... .
5. Two commodities of label Amul are ..... and ..... .

NEW TERMS

- **Pasteurisation:** Heating liquids to kill microbes.
- **Agriculture:** Cultivating land and livestock.
- **Extraction:** Pulling resources from sources.
- **Interdependence:** Mutual reliance for progress.
- **Raw Materials:** Basic substances for production.
- **Primary Sector:** Extracting and using natural resources.
- **Manufacturing:** Converting raw materials into products.
- **Cooperative:** Jointly owned and managed organization.
- **Industrial Revolution:** Shift to machine-based production.
- **Tertiary Sector:** Providing services, not goods.
- **Secondary Sector:** Processing raw materials into goods.
- **Amul:** Leading dairy co-operative in India.
- **National Milk Grid:** Network ensuring milk distribution.
- **Operation Flood:** India's dairy development program.
- **Infrastructure:** Basic systems supporting community functions.

QUICK TAKE

- Economic activities are divided into three categories: Primary, Secondary and Tertiary.
- Primary activities directly involve extraction and generation of raw materials (agriculture, mining, fishing etc.) and form the economic foundation.
- Secondary activities transform primary resources into finished or semi-finished products through manufacturing and processing.
- Manufacturing, construction, modification and creation fall under secondary activities, adding value to raw materials and offering jobs.
- Service-related activities provide necessary support to primary and secondary sectors (banking, healthcare, education, transport etc.), aiding in product distribution.
- These three sectors are interconnected: raw materials from primary, processed goods from secondary and services that support production and delivery.
- Dr. Verghese Kurien led India's White Revolution, turning the nation into the largest milk producer, earning him the title "Milkman of India."
- The name "Amul" is derived from "Amulya," a Sanskrit word meaning "priceless" or "precious."

- Amul brand was launched in 1955 with sterilized milk and butter.
- In 1965, the National Dairy Development Board (NDDB) was formed with Dr. Kurien as Chairman.
- In the 1970s, Dr. Kurien initiated Operation Flood, a nationwide milk development program that boosted milk production and ensured fair pricing.
- Amul offers a wide range of dairy products like cheese, ice cream, milk powder, yogurt, butter, ghee, flavoured milk, as well as non-dairy items like chocolates and beverages.

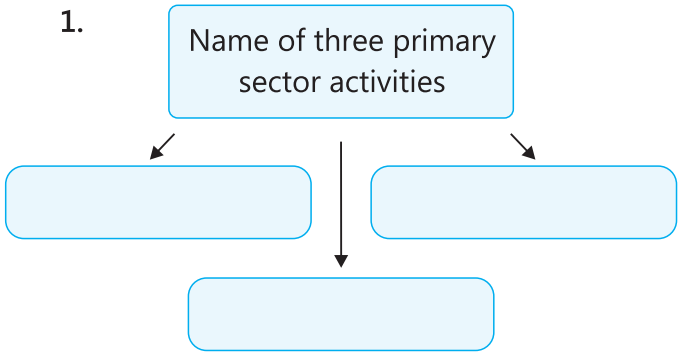
I. OBJECTIVE TYPE QUESTIONS

A. Choose the correct answer.

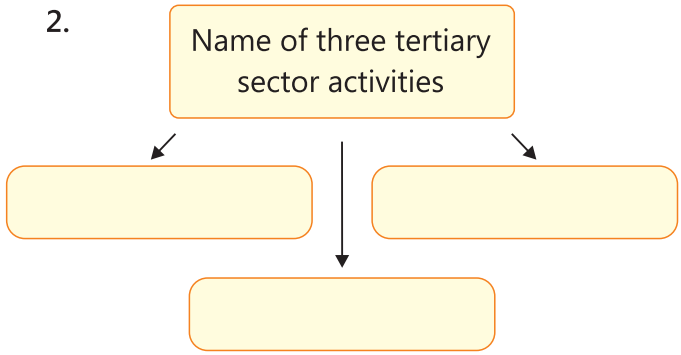
1. Which of the following is a service-based sector activity?
   (a) Harvesting fish ☐ (b) Finance ☐
   (c) Building houses ☐ (d) Extracting iron ore ☐
2. The Secondary sector mainly involves _____.
   (a) Removal of natural resources ☐ (b) Manufacturing and processing of goods ☐
   (c) Giving help ☐ (d) Business and trade ☐
3. Which among the following is a Primary sector duty?
   (a) Teaching ☐ (b) Instructing in academy ☐
   (c) Extracting coal ☐ (d) Offering financial services ☐
4. Which sector of the economy is also called the Service sector?
   (a) Primary sector ☐ (b) Secondary sector ☐
   (c) Tertiary sector ☐ (d) None of these ☐
5. The Secondary sector depends on the service sector for _____.
   (a) Removing natural resources ☐ (d) Collecting crops ☐
   (c) Support like transport and finance ☐ (d) Raising animals ☐

B. Fill in the blanks.

1.



2.



3. **Sort the following list of jobs into Basic, Middle and Service divisions and fill the tables given below:**

(The first table is already completed for you)

(a) Mining (b) Construction worker (c) Factory worker (textile) (d) Dairy farming
(e) Teacher (f) Car manufacturing (g) Bank clerk (h) Retail shop owner
(i) Doctor (j) Fisherman

Primary Sector	Secondary Sector	Tertiary Sector
Dairy farming	Construction worker	Teacher

C. Write 'T' for True or 'F' for False.

1. The service division includes support like education, healthcare and banking. ☐
2. The basic division is also called the "industrial division." ☐
3. The middle division depends on the service division for support like transport and banking. ☐
4. Rearing animals is a middle division activity. ☐
5. Making goods is a part of the service division. ☐

D. Assertion-Reason

For each of the following questions (1 to 4), two statements are given – one labelled Assertion (A) and the other labelled Reason (R). Read both statements carefully and select the correct option from (a), (b), (c), and (d) as given below:

1. **Assertion (A):** Middle division activities include changing raw cotton into cloth and garments.
   Reason (R): This division is also called the "Manufacturing Division."
2. **Assertion (A):** The service division provides facilities like transport, banking, education and healthcare.
   Reason (R): This division does not make goods but supports both basic and middle divisions.
3. **Assertion (A):** Basic division activities are also known as "farming and related division."
   Reason (R): These activities include taking and making natural resources like crops, milk, coal, fish and wood directly from nature.
4. **Assertion (A):** The middle division is also known as the "Agriculture Division."
   Reason (R): It increases the value of raw materials by changing them into finished or partly finished goods.

(a) Both Assertion (A) and Reason (R) are true and Reason is the correct explanation of the Assertion.
(b) Both Assertion (A) and Reason (R) are true but Reason is not the correct explanation of the Assertion.
(c) Assertion (A) is true but Reason (R) is false.
(d) Assertion (A) is false but Reason (R) is true.

D. Choose the option that correctly matches items from **Column A** and **B**.

Column A	Column B
1. 1946	(i) Dr. Kurien entered Amul
2. 1949	(ii) National Dairy Development Board (NDDB)
3. 1955	(iii) Kaira District Collective Milk Producers' Union Limited
4. 1965	(iv) The label Amul was introduced

(a) 1.-(iii), 2.-(i), 3.-(iv), 4.-(ii)
(b) 1.-(iv), 2.-(iii), 3.-(i), 4.-(ii)
(c) 1.-(ii), 2.-(iii), 3.-(i), 4.-(iv)
(d) 1.-(iii), 2.-(i), 3.-(ii), 4.-(iv)

II. SHORT ANSWER TYPE QUESTIONS

1. Explain how the basic and middle divisions depend on each other.
2. Discuss why the service division is also called the "amenity division".
3. Describe the role of the basic division in the economy of any country.
4. How do education, skills and technology improve production? Explain.

III. LONG ANSWER TYPE QUESTIONS

1. Why are middle and service sectors important for India's development?
2. How do basic, middle and service sectors depend on one another?

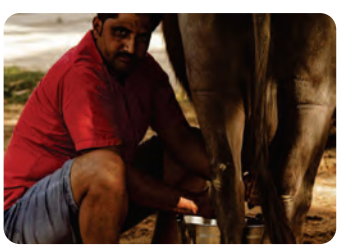
IV. DISTINGUISH BETWEEN THE FOLLOWING

1. Primary sector and Secondary sector
2. Agriculture sector and Service sector

V. PICTURE STUDY

"Look at the given picture carefully and answer the following questions briefly."

1. What work do farmers do in the production of Amul milk?
2. How does the dairy factory (Amul) support farmers?
3. Which sector helps in supplying milk and milk products to shops?



VI. SOURCE BASED QUESTIONS

Read the given paragraph and answer the following questions.

Economic activities are divided into three sectors: Primary (collecting raw materials like farming and mining), Secondary (changing raw materials into goods through industries), and Tertiary (providing services like transport, healthcare and banking). These sectors depend on one another for economic development and long-term growth.

1. If farmers stop growing crops, which sector will be affected most directly first?
   (a) Primary materials ☐ (b) Secondary industries ☐
   (c) Tertiary services ☐ (d) None of the sectors ☐
2. A factory that makes paper from wood belongs to which sector?
   (a) Tertiary sector ☐ (b) Primary sector ☐
   (c) Quaternary sector ☐ (d) Secondary sector ☐
3. If a country focuses only on the primary sector, what problem might it face?
   (a) No industries ☐ (b) Too many industries
   (c) Shortage of materials ☐ (d) No services
4. Why is the tertiary sector important for the growth of both primary and secondary sectors?
   (a) It offers services like transport and trade ☐
   (b) It extracts minerals ☐
   (c) It provides raw materials ☐
   (d) It manufactures goods ☐

Mini Business Plan: Imagine starting a small business (such as a fruit stall or stationery shop). Write a plan about what you will sell, how you will set prices and who your customers will be.

Test Paper-I

Based on chapter 1 to 7

A. Choose the correct answer.

1. Which of the following is the exact model of the Earth?
   (a) Map ☐ (b) Globe ☐ (c) Apple ☐ (d) Ball ☐
2. Which continent is the biggest continent on Earth?
   (a) Asia ☐ (b) Europe ☐ (c) North America ☐ (d) Australia ☐
3. The solid outer layer of the Earth where we live is called the
   (a) Air layer ☐ (b) Rock layer ☐ (c) Life zone ☐ (d) Water layer ☐
4. Manuscripts were written in which of these languages?
   (a) Sanskrit ☐ (b) Prakrit ☐ (c) Tamil ☐ (d) All of these ☐
5. The name for India commonly found in Chinese history books, Buddhist writings, and records of Chinese travelers is.
   (a) Tianzhu ☐ (b) Yindu ☐ (c) Shendu ☐ (d) Jambudvipa ☐
6. The Harappan city of Dholavira was divided into:
   (a) three parts ☐ (b) two parts ☐ (c) four parts ☐ (d) five parts ☐

B. Write 'T' for True and 'F' for False.

1. 66½°N latitude is known as the Arctic Circle. ☐
2. The Mariana Trench is the deepest point in the Atlantic Ocean. ☐
3. The Himalayas are a chain of connected mountains. ☐
4. Handwritten texts on birch bark are called inscriptions. ☐
5. The Sapta Sindhava region was watered by the river Ganga and its smaller rivers. ☐
6. The cities of Dholavira and Lothal help us understand Harappan culture. ☐
7. Buddha attained enlightenment at Kusinara. ☐

C. SHORT ANSWER TYPE QUESTIONS

1. Why are conventional symbols used on maps?
2. What makes Earth known as the Blue Planet?
3. Explain the different types of mountains.
4. Write a short note about the way hunter-gatherers lived.
5. Write briefly about the origin of the name "Jambudvipa"

D. LONG ANSWER TYPE QUESTIONS

1. Discuss two major oceanic disasters.
2. Describe the importance of plateaus and mountains in human life.
3. Explain how the life of early humans changed after the last Ice Age ended.
4. Explain what the Mahabharata tells us about ancient India.
5. Describe the main features of the religious practices of the Harappan people.

Test Paper-2

Based on chapter 8 to 14

A. Choose the correct answer.

1. Which food item shows unity in Indian food culture?
   (a) Chapati ☐ (b) Thali ☐ (c) Rice ☐ (d) Idli ☐
2. Which of the following is not a feature of an extended family?
   (a) Sharing responsibilities ☐ (b) Many generations living together ☐
   (c) Living in different places ☐ (d) Strong assistance system ☐
3. Which branch of the government is responsible for making laws?
   (a) Courts ☐ (b) Administration ☐ (c) Legislature ☐ (d) Police force ☐
4. What percentage of seats in the Gram Panchayat are reserved for women?
   (a) 50% ☐ (b) 25% ☐ (c) 33% ☐ (d) 20% ☐
5. The elected members of the Nagar Council are known as
   (a) Councillors ☐ (b) Village Members ☐
   (c) Ward Representatives ☐ (d) Legislative Assembly Members ☐

B. Write 'T' for True and 'F' for False.

1. The service division includes support like education, healthcare and banking. ☐
2. Collective involvement weakens social bonds among people. ☐
3. The 74th Constitutional Amendment was passed in 1995. ☐
4. The Panchayati Raj system has a two-level structure. ☐
5. The Panchayati Raj system shows local self-government in a village. ☐
6. SEWA is an organization for self-employed men in the organized sector. ☐

C. SHORT ANSWER TYPE QUESTIONS

1. Write a note on how Indian food represents the idea of unity in diversity.
2. How do communities depend on each other?
3. Write the main goals of Bal Panchayats.
4. Make a list of the sources of income of a Nagar Panchayat.
5. Give two examples of non-financial activities.
6. Write a short note on the Judicial branch.
7. How do education, skills and technology improve production? Explain.

D. LONG ANSWER TYPE QUESTIONS

1. Explain how Indian traditions promote "Unity in Diversity" through food, festivals and clothing.
2. Explain any three important roles of communities.
3. Describe how local democracy helps people at the community level.
4. How can a Bal Panchayat help in making decisions in a village?
5. Describe the different duties performed by a Municipal Corporation.
6. Explain the importance of non-economic activities in personal growth and social welfare.
7. Primary sector and Secondary sector .
